In an interview with school officials, an official statement on the
matter was released, saying in part:

"He had told her (the teacher in the lunchroom) that 911 was planned
and orchestrated by the U.S. government. If these ideas are delusions,
I believe Mr. Mustric should not be allowed to teach in schools where
students would gullibly believe his statements."

- Nope !

No Sympathy here.. Sounds like a Nut Case to me ; Wouldn't want him
around any kid
I knew.

- THen again, he can Picket the school after he's Fired....

Long Live Free Speech...

Well.......

A very challenged Frog Seven. I punched in my zip code (Wisconsin) and
shipping was about $27.00 for Fedex Ground....add their $7.00 "handling" fee
and they need $34.00 just to get that pile of sh$t to my house.

Americans increasingly will not listen to even local AM-quality radio. they certainly would not listen to fady, erratic SW.

And nobody would listen. It's AM analog. It's a digital world.

Yup, I hear that often, which is why I've had modest success with Jerry
Ziliak tapes. He sends at a character speed of 21 WPM, so each letter
almost becomes a single sound. Although that hasn't helped me much, thanks
for the thought.

> There is always
> a sense of accomplishment in expanding your abilities in ham radio. For

modes
> and VHF/UHF propagation.

Oh, yeah!!!! I am into packet and APRS, into building antennas for myself &
for the RACES stations and into teaching. Here in the West, we have
something called the Western Intertie Network System or "Win System"
http://www.winsystem.org/ which is loads of fun. It also has IRLP, so I've
chatted with guys all over the world with it.

I did HF PSK31 under the club license during FD a few years ago. Great fun.

I've became an ET in 1962 (USN) and liked it well enough to stick around for
21 years. I became an engineer in 1989 (thank you, GI Bill), so I know my
way around the 'trons. I've only been a ham since 1992.

In all honesty, I would likely feel safer buying that radio above
than any item from another certain e-Bay 'radio salesman' who
likes to place his 'merchandise' atop red velvet material and keeps
his bidders ID's 'undislosed' for the duration of the auction.

A country that is almost 9 trillion in the hole as far as a federal
deficit is not in good shape. Not to mention the crumbling schools and
infrastructure in the country. Check out some studies about
infrastructure especially how many bridges in this country are
structurally deficient. Do some research Dx Ass and you might learn
something. Then again its doubtful that a retard of your ilk could even
read.

I don't pay attention to the left wingers much at all. However you're so
f@@@ing blind and stupid that you believe every one who doesn't like
Bush is some ultra liberal. What a pitiful little fool you are.

You can thank the Republicans for the whole free trade sham. Considering that Bush I and Reagan started the free trade ball rolling. The foreign auto makers have little to do with our economic problems. It's called mismanagement and when you have a period from 2001 to now with the sort of indebtedness and financial mismanagement of the Republicans. Interestingly, the federal debt was 1 trillion dollars in the last year of the Carter administration. It went up 2 trillion dollars from 1981 to 1990 when Reagan and Bush were presidents. 1.3 trillion more from 1990 to 1993. 1.4 trillion during the Clinton years. Now 2.7 trillion during the BUSH II years.

Furthermore, the incomes fell from 2001 to 2004. The savings rate is at the lowest point since 1933. Not to mention average personal credit card debt is now in excess of 9000 dollars per person. That's not a whole lot of money to be spent in the economy which tends to dampen consumer spending except by credit. The dot bomb fiasco was another failure of the market to regulate itself. Just more speculative failure because too much money was poured into non productive companies. The companies that survived the Internet bubble were the ones turning a profit and have something to show for the investments that were made. Overvalued stocks were another reason for the dot bomb fiasco. Nothing more than legalized gambling.

I don't divulge my personal financial dealings. But one thing I will
say, is that any guy who posts on company time is stealing from his
employer. Many companies don't look too favorably on a guy who surfs the
net for non company business.

In-store only. I bought one, liked it, went back and got another (it was the display unit so I got RS's double warranty on it). Funny, the clearance label on the display said it was $99, but I showed the print out of their web page to the clerk, he looked it up on the computer and said that it was indeed $49.97.

Glad you have a good grasp on your tiny little world Eduardo.. but a lot of the rest of us belong to a great big world with a lot of other choices besides the ones that the NAB wants to cram down our throats. I don't personally know ANYBODY outside of broadcasting that want's to put up with IBOC, and I know several BE's (and I am one of them) that consider it nothing but a QRM generator, and a major PITA to work with. Not to mention that anyone outside a few mile radius from the transmitter can't hear the digital signal to start with. This is proven by anecdotal evidence of numerous people who have purchased the $300 BA (down from $500) and attempted to use it in their local signal areas.

Tell me something, Eduardo.. are people going to put up big outside antennas, or random wire AM antennas, just to hear a crappy digital signal full of artifacts? I don't think so. The majority of listeners now are using boom box radios and don't bother to even put the antenna up on them most of the time. I'm pretty sure they're not going to spend big $$$ on a piece of shit radio, then have to put up antennas to use it. Ain't gonna happen. I suppose you think that you're going to hear the sound of half a billion (or more) analog radios hitting the trash can? I think it much more likely that will be a few hundred IBOC transmitters hitting the landfill.

5702. MAKE HONEST LEGAL MONEY WITH $6.00

Newsgroup: rec.radio.shortwave
Date: 2006-05-19 10:57:19 UTC
From: Elbeva <elbeva@hotmail.com>
Message-ID: <1148036239.151567.252330@j73g2000cwa.googlegroups.com>
Source record: 74910

MAKE CASH QUICK

Comments
NEED EXTRA CASH???? TURN $6.00 INTO $6000 OR $60000... READING THIS MESSAGE WILL CHANGE YOUR LIFE FOREVER !!!!!!PLEASE READ THIS ALL!!!!!!!!! !!!!IT HELPED ME & IT CAN HELP YOU!!!! !!!! THIS IS NOT A SCAM !!!! !!!I REPEAT THIS IS NOT A SCAM!!! THIS ONLY COST YOU A 6.00 CASH !!!INVESTMENT!!! IT DOES WORK !!!PLEASE READ ALL!!!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, Yeah right, this must be a scam, but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. (There are thousands).

No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: what have I got to lose except 6 stamps and $6.00, right? Then I invested the measly $6.00. Well GUESS WHAT!!... Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly.

It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, why it works....Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Suggestion: Read this entire message carefully! (Print it out or download it.)
Follow the simple directions and watch the money come in! It's easy. It's legal. And, your investment is only $6.00 (Plus postage)
IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is virtually no risk - it really works!!!! If all of the following instructions are adhered to, you will receive extraordinary dividends. PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This

program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

HERE ARE THE 4 EASY STEPS TO SUCCESS:
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper; PLEASE PUT ME ON YOUR MAILING LIST with your name and address. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them.
You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6 envelopes to the following addresses:

1)
Erwin Castillo D.
Rio Lauca # 338, La Reina
Santiago, Chile

2)
Lourdes Aguirre
Apartado Postal 18
31780 Bera
Navarra, España

3)
Liliana Molina
French n° 624 - Resistencia
código postal 3500 - Provincia del Chaco
Argentina

4)
Victorino Cid Fernandez
c/bizkerre nº 22 3º c - 48991
Getxo, Bizkaia, España

5)
Eduardo Peña Morales
Pasaje Uno nº 935 C.P. 653-0029
Quilpue, Chile

6)
Elías Fredrik Berntsson
Parkvägen 11A
45930 Ljungskile
Suecia (Sweden)

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups.
(I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.
PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way. NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service.

(Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.) So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!!
What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business! ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS---------- Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and places your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. STEP 3: Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

STEP 4: Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)
(Just example you log on any search engine like yahoo.com,google.com,altavista.com,excite.com then you search with this

subject ?millionaire message board? or ?money making message board? or ?employment message board? or ?money making discussions? or ?money making forum? or ?business message board? etc.
You will find thousandS & thousandS of message boards.) STEP 5: Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's it!
You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT** Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example).
So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00!

Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625! With an original investment of only $6.00!
AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday? JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money?

So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember: play FAIRLY and HONESTLY and this will really work!!

Brenda Ann,

You've shown yourself to be one of the true voices of sanity on this newsgroup, and I do respect your viewpoints on various issues.

However, I speak from personal experience when I say that arguing with Eduardo (and his cheerleading section) is about as effective as teaching a horse to sing.

We, the radio listening public, are just going to have to wait for the decline of radio brought on by the likes of Eduardo to get serious enough that the bean-counters actually notice the downward trend. I haven't listened to commercial radio in years -- not without trying, mind you, but it is just boring and bland beyond hope.

Arbitron will never figure it out, too. After the brilliance of Arbitron was pointed out to me (again and again and again), I finally got asked to participate in one of their surveys. Well, actually, my computer was asked. They just picked random phone number digits and came up with my computer modem line, and weren't actually interested in talking to the owner of that modem when I contacted them about participating in the survey. Well, our local water system's data line was also asked to participate, too.

I hate to admit it, but radio as we've known it is finally dying. The bean counters won, radio lost.

Source record: 74918

"The Right Perspective," with Frank from Queens and John of Staten Island, airs tonight 10pm EST over shortwave WWCR 3.215 Mhz and over the Internet at www.therightperspective.com

Dubbed "New York's Most Dangerous Callers to Talk Radio" by no other than Bill Clintion himself, Frank and John never fail to deliver explosive conservative talk radio in a style that had listeners calling into shows such as Bob Grant to ask if they had been on the air yet.

Frank delievers assailing commentary on explosive issues of the day such as illegal immigration, historical revisionism and the rise of Socialism, with brash commentary and unapologetic solutions culled from a life experience, decades of following and debating politcs, and his degrees in History. One part of their show, "Hello, Africa!," developed from a segment into a full-fledged show-within-a-show, where they shed light on the Dark Continent and have interviewed such controversial guests as Dr. Lets Pretorious, Eugene Terreblanche and Henry Pinkham.

Frank and John's unapologetic stance means you will never find them fence sitting or making nice-nice with Leftist Poverty Pimps the way Bill O'Riley does with Al Sharpton. Many of Frank's key points and phrases wind up being echoed the following weeks on such shows as Sean Hannity, Michael Savage, and even Rush Limbaugh.

Hear what the other conservative talk radio hosts will be saying next week tonight at 10pm EST at www.therightperspective.com

Not worth touching PERIOD. Only way the cover paint could
get burned off like that is if the radio was exposed to something
corrosive like salt water or chemicals. My guess is this radio
was salvaged from a boat that was partially sunk in salt water
and he hosed it down and let it dry in the sun to make it look
pretty or it sat in someone's paint or metal shop and it took the
brunt of a beating. Ask yourself if you would buy a USED CAR
that looked like this radio.

I bought one too, but it turned out to have a blemished display. RS seems to put items on clearance, when there are only a few left, but they are usually returned, or display items. Of course, the RS salesman lied to me an said that it was, "new-in-the-box", so I returned it. Since I couldn't find one that was sealed, so I could use it as a backup, it wasn't worth it. Then, I did some research on the Web, on the E10, because it has that IF Shift switch, and I was leary that it might be single-conversion (dual-conversion set wouldn't need this switch) - sure enough, it is single-conversion, without SSB. I felt like a idiot, but the price seemed really good, and I only wanted to use it for AM Dxing. Unbelievable, that RS would sell a single-conversion, without SSB, receiver retail for $120. Grundig/Eton seems to be making low-quality receivers with a bunch of useless switches on them (e.g., the S350's wide/narrow and IF low-pass filters and RF gain control) - a lot of glitz for $100. Also, I read that the E10's antenna trimmer knob can be left in one position, so it seems to be pretty useless. So looking on the Web, there are bunches of E10s for $39 + S&H, on Ebay ! Eton is coming out with new E10s and E100s, I believe, with some sort of new rubberized coating. Also, on Ebay, there are Degen 1103s for $45 + $25 S&H - this is a far superior radio to the E10; it has dual-conversion with SSB, and is probably much better quality (people rave about it on Amazon and eham.net). No more Grundig/Eton/Tecsun in my life !

There is not much question about the condition of the receiver. Looks like it sat in a humid shed for 20 years. My complaint is that the seller is just another of those Ebay listing services. My experience in getting questions answered from services like that has been so poor that I will not bid on goods listed by them.

Why would you even ask a question like that? Even if it wasn't (I don't
know either way,) you'd have to be one sick fuck to even think about
listening to it in the first place...!

There are at least six AM Radio Stations here in the greater metro
Jackson,Mississippi area.I guess they have a pretty good listening
audience,elsewise,they wouldn't still be floatin around on the airwaves.

I'm sure it's very common in urban and natural canyons. Many places
with severe multipath issues will benefit from the HD.

Sure, the demise of DXing is sad, but we don't have hitching posts on
Main Street nowadays either. Time marches on.

Mayhaps much ado about nada... the Grove dealie bears a remarkable
resemblance to the external antenna that Sony packed with my 2010.
Sony has 23.5 feet of stranded wire with a clip at one end, a plug at
the other end. Nothing else...

That must be a work of fiction. During the whole Katrina aftermath, I never saw one amateur station in operation, nor do I know anyone who did. Amateurs were of zero help during the emergency, and the public got most of its personal information over the internet.

The media were of no help (carried only stories about New Orleans), the Red Cross was of no help (arrived too late in most communities), and the government agencies were definitely of no help.

If it hadn't been for the internet, most of the evacuees in my hotel would have had no idea about what was going on at home.

The hams should be ashamed of themselves for pretending that they can do anything useful any longer. What a crock of crap they're peddling.

The hams were running several continuous nets on various frequencies
throughout the aftermath of Katrina.

Guess you weren't listening.

The hams had zero impact on evacuees. The hams were invisible.

I did listen to the hurricane net on EchoLink (can you say
"internet?"), and it was totally useless activity that only served to
make armchair hams feel important. I shut down the EchoLink client
and returned to finding information about my community on the web.

I wonder if it's going to be similar to its larger cousin.

All the reviews I've read have made a big deal of the regular
CC-Radio's problem with overloading on strong stations.

It is a cute-looking little devil though.

< Snip >

No, but it is against your TOS agreement with your IPS provider to abuse open news servers, the news group rules, not to mention the open servers themselves.

It would be a smarter choice to not abuse the news group at all but as a minimum please stick to a handle so people have the option of kill filing your posts. I know that this will put one limitation on the fun you have but think of it as a truce between you and people that want to use the news group for its intended purpose.

Government-sponsored NPR? Not in my lifetime, I hope. They take some money, yeah, ut I don't think George would be too happy with what he would hear there on any given day. And the programs are a lot of crap anyway. If you want to ear some real good radio, listen to CBC anytime before the year 2000.

>Perhaps you missed the news this week. Bush is the ONLY President to do anything about the illegal immigration issue.<

C'mon, you know that this ratshit response is only because the whole country is practically up in arms, including his own party, he feels he has to do SOMETHING as a result, and he's desperately trying to latch onto something that will increase his and the Republicans' stead with the U.S. population. I'm not saying any other president would not act the same way...but no other president has had this precise situation fall into his lap, and what he is doing is not only minimal and ordinary, it is also far too late and insincere.

On top of that, he still wants to make it possible for all the criminals from other countries to get what amounts to a free pass, and open the door for 100's of millions more. So do lots of Republicans and Democrats who lust after their votes. It's just pathetic pandering by a gutless wonder. It's wholesale selling of our country down the drain to people whose sole interest here is economic, by people whose sole interest is power. How in hell can you support this travesty, by either side?

The actual uplink is usually in the 10 to 25 watt region for video,
and it would take less for a narrow audio only signal. An all solid
state microwave transmitter would only consume a few hundred watts. The
studio equipment would use more energy than the uplink. BTW, i have
been trying to track down the owner of an abandoned C-band video
confrencing earth station that was built by Microdyne. I want the
equipment because the system is serial number one, and the only uplink
they ever built.

From your RR IP address it looks like you're in Ohio, so I'm no help
in Florida, but its a simple job. I would add a buffer amplifier to
keep the modification from affecting the dial calibration and alignment
of the radio, but that is simple, too.

BTW I lived in Ohio for 35 years, just below Dayton.

I figured a few hundred watts for uplink power of the final PA but as you mention there are facilities that need to be supported along with the uplink dish. People are often surprised at how much power is consumed by support facilities for the electronics, lights and air conditioning. I have managed facilities that consume 100 KW and did not transmit any signal, just lights, electronic equipment, air conditioning, and heating.

People tend to forget the cost of putting the satellite into orbit. This is a cost that can not be ignored either.

I don't know where you go looking for C band uplink equipment.

The Chinese have launched an orbiting monkey capsule, and they have
chosen the very low frequency of 10240 kHz for their voice channel.
If you listen on May 28th, you will be able to hear the monkeys scream
in terror as the capsule burns up on reentry.

I can't wait.

Chamber another one!

I spent time at Gordon. Late 80's, wasn't born yet in 62, of course you
knew that.

Partied hard almost every weekend in Augusta too. Broad Street. titty
bars.

Were you really at Gordon?

I have to take back some of the evil thoughts I had about the intelligence
level of Eton radio designers and engineers after reading your posts.
They weren't too stupid to realize the bad designs of their radios and had
the fore thought to incorporate the alignment hole through the case.

For them, that's what I call: Forward thinking!

Well, I guess the reporter that wrote the front page article in the Wall Street Journal about how helpful ham radio was got chumped and lied to by all the people he interviewed for his story.

> and the public got most of its personal information over the
> internet.

Now, that's interesting as most internet traffic goes through the telco central offices and many of those were either under water, had no commercial power and/or were out of fuel for their generators...

5828. Re: More Info on Eton E1 Frequency Alignment

Newsgroup: rec.radio.shortwave
Date: 2006-05-19 23:53:44 UTC
From: gosmithwhisper@yahoo.com
Message-ID: <1148082824.351359.241530@i39g2000cwa.googlegroups.com>
Source record: 75035

NOTE: Watch out - the batteries blow up, when used with the AC adaptor
!

So, what is the point of plopping down $500 for this radio - there is
not much of interest on shortwave anymore, one can buy a $25 digital
PLL AM/FM radio for AM DXing (THE E1 DOESN'T EVEN HAVE AN INTERNAL
FERRITE-BAR ANTENNA, OR COME WITH A SATELLITE ANTENNA !), and one can
buy a satellite radio for $50, now. Also, after getting $500
in-the-hole, one gets to shell out a monthly fee for satellite radio,
plus an activation fee - a bigger ripoff than cable T.V. !
Evidentually, there are major technical problems with the actual
satellites, so its future is in question !

So, what is the bottom-line ? Well let's see, $500 for the radio,
probably another $100 - $200 for the AM and satellite external
antennas, $9 - $12 monthly fee, and the activation fee. Is this another
blunder by Grundig/Eton/Tecsun, or a total ripoff - I suspect a bit of
both !

This baby, I believe, is assembled in India, while the rest of the
Grundig/Eton/Tecsun junk is made in China. I wonder, if the E1 is as
cheap as, the Grundig S350 ?

This is a copy of a post from gearlog.com (the BBC and "Voice of the
Andes" are now gone from SW, too):

Shortwave Eton E1
Posted by: Larry N.
Monday, October 31, 2005 8:03 PM

David,

I am shocked your would recommend this new radio from Eton.
Honest?, DO YOU KNOW WHAT IS WRONG WITH IT? It does not have Digital
Radio Mondale! Who in 2005/2006 would spend $500.00 for a top of the
line portable without it? In few years the shortwave part of this radio
will be useless. DW is leaving analog shortwave by June 2006. Radio New
Zealand by the end of December 2006.

I would hope you would admit your mistake and if not withdrawing your
recommendation at least make note of the lack of Digital Radio Mondale
and why that is important!

73
Larry

(Note Part 1 of Josh Bolten's ''Five Point Plan''.)
>
Time Magazine reports that new WH Chief of Staff Joshua Bolten has
developed a five point plan to reverse Bushï¿½s falling popularity and
keep his legacy from becoming ï¿½investigations and fights over
Executive privilegeï¿½ with newly empowered Democrats. (As opposed to
ï¿½The Worst President in History?ï¿½) The frequent references to the time
remaining in the 43rd presidency have an intriguing association to the
movie ï¿½Anne of a 1000 Daysï¿½. Anne being one wife of King Henry VIII
who died, or was killed, 1000 days after she became his wife. (If
memory serves, she was the mother of Queen Elizabeth I, and Henry
wanted a male heir).

I digress. The Bolten White House Staff revision, the fourth since
1/05 according to Time and so far only a game of musical chairs, is
only just begun. However the potential GOP losses in November have put
pressure on Bolten to move quickly on staff changes so a six months
campaign to change the public opinion of this presidency can get out

of the gate. Already in his new position, Karl Rove will give up the minutiae of the deputy chief of staff position (ie. spending ï¿½hours editing memos written for the President by specialists on everything from levees to student test scores.ï¿½) to Joel Kaplan, former Marine and Supreme court clerk. Heï¿½s a 36 year old newlywed, maybe he will cut the editing time down so W actually gets some usable information.

Fortunately for us, friends and colleagues of Boltenï¿½s leaked his five point ï¿½recovery planï¿½ to TIME.

1) ï¿½Deploy Guns and Badgesï¿½. For his base worried about the illegals crossing the border, Bush will get $ for more enforcement. Mexico, not Canada. The Photo - ops will be of W meeting with the new Border Patrol agents who have badges, guns and ride around on ATVs. Bush would even go riding on an ATV. Maybe he will fall off, or look like Michael Dukakis in the tank. (No offense to the Govenor, Iï¿½ve never met any guy who would pass up a ride in a hi tech army tank. I sure wouldnï¿½t.)

2) ï¿½Make Wall Street Happyï¿½ Somehow I canï¿½t picture them happy. They donï¿½t always look as grumpy as (Bronco Coach) Mike Shanahan, but I donï¿½t remember seeing them smile either. This transformation will be achieved by getting the legislature extending tax rate cuts for stock dividends and capital gains passed. Here the photo ops will be on financial TV shows when the happy Wall Street guests tell Republican investors how great the economy is.

Can we get them to talk about how this will offset the $150,000 Federal debt every child now owes?

3) ï¿½Brag moreï¿½ This includes every thing from the Medicare drug bill, the stock market, stable inflation and interest rates, plus anything good that comes out of Iraq. It will not include health care, the rebuilding of NOLA, gas prices or the civil war in Iraq. I think it should also include ï¿½pray moreï¿½. That the housing market doesnï¿½t tank and the cost of everything that uses oil and gas doesnï¿½t go up as fast as the pump prices.

4) ï¿½Reclaim Security Credibility.ï¿½ Acknowledging this is the risky part, the plan is to use Iranï¿½s nuclear program as Bushï¿½s salvation from the Iraq fiasco. ï¿½a Republican frequently consulted by the White House has said ï¿½ï¿½In the face of the Iranian menace, the Democrats will lose.ï¿½ Wow, donï¿½t send this guy the LA Times/Bloomberg poll or Friedmanï¿½s OP-Ed. If the generals and intelligence officers stop coming out of retirement to speak up on this, can we try the ï¿½64 Johnson ad?

5) ï¿½Court the Press.ï¿½ Starting with hiring Tony Snow of Faux News as the new WH press secretary. He is considered an ï¿½outsiderï¿½ and a fun guy. Iï¿½m not sure how much the press is in a mood to be courted. Theyï¿½ve been married to Bush for 5 years and lately itï¿½s shown signs of breaking up. If they do cave in, Iï¿½m betting on a short honeymoon.

Especially if we through a lot of rice paper at the press - LTEs, reminders of how they failed in the Iraq questionsï¿½

Oh, the staff is going to ï¿½work more astutely with journalistsï¿½. as-tute, adj.: shrewd, clever, cunning. Same song, different verse?

I personally like the ï¿½investigations and fights over Executive privilegeï¿½ with newly empowered Democrats, option.

Since we have been handed the plan, thanks to friends and TIME, letï¿½s get the obstacles up before Josh has the rest of the staff in their chairs. Start the music.

5833. Two antenna questions

Newsgroup: rec.radio.shortwave
Date: 2006-05-20 00:24:19 UTC
From: Unrevealed Source <unrevealed_source@nospam.com>
Message-ID: <Lntbg.641$Ov1.83@fe03.lga>
Source record: 75040

1) Does anyone have any experience with or recommend an alternative to an Alpha Delta switch, model Delta 4? Since the Daiwa CS-401 is discontinued and seemingly impossible to find, I'm looking to upgrade from 2 to four positions (more radios) but don't want the cheap junk of MFJ. Is there another good but reasonably priced 4-port switch that anyone has experience with, or do you recommend the Alpha Delta? That one is $75. This is for receive only.

2) What do you do if you have succesfully matched your longwire to a 50ohm coax with a MLB and have coax coming into the house, but now want to use that on a high-impedance antenna input (those radios that don't have a coax connection but just a terminal or jack for a long wire)? Do you do another MLB with just a short length of wire on the antenna side for connection to the radio?

Thanks in advance for any informative responses.

Not a question, but some obvervations: Just got two new radios. First was a Sony ICF-5900W (thanks Mike!). Excellent working condition and very solid. After giving it a good bath (alcohol, toothbrush, Q-tips, etc) and then some Novus, and of course making sure the innards were clean and lubed, it works like a charm and looks almost brand new. Very sensitive radio. I was most impressed by the audio clarity. Side by side with the RF-2200 I might have to give the edge to the Sony, for just voice clarity.

Second new radio was a Panasonic RF-5000A. I have always wanted one but they go for too much and those that don't are generally pretty banged up. Got an eBay Second-Chance offer and lucked out. Amazingly well-preserved. Did a similar but more involved cleaning, and was a little intimidated at first when I opened it up. Have you ever seen the inside of one of these? Definitely the most well-built radio that I have ever seen, and once I sat down and took my time it was actually easy to dissassemble. After a thorough cleaning and reassembly, it looks like new. Literally. And it works great. There is no doubt that it is, as most say, the best sounding portable ever. This is one BIG and HEAVY radio. Shortwave seems to be pretty sensitive, but I haven't put it through any serious head-to-head comparisons. This may be my new "Best of Show", based on condition and just how cool it is. If you ever have a chance to pick one of these up, you'll love it.

David,

On that we can agree 101 re-broadcasts
of Coast-to-Coast AM is not entertainment
that will cause Late Night Radio Listeners
to Tune-the-Dial to find something of interest.

Require all 50 KW Clear Channel AM/MW Radio Stations
to carry locally produced 'original' Programming from
5 AM to 10 AM in the Mornings and 7 AM to 12 Midnight
in the Evenings.

5845. WARC Frequency Bands

Newsgroup: rec.radio.shortwave
Date: 2006-05-20 01:23:41 UTC
From: willismat239@earthlink.net
Message-ID: <1148088221.209343.306290@38g2000cwa.googlegroups.com>
Source record: 75052

I had been away from the hobby for a while, and am not in the know of things like I once was. Can someone tell me if the 60 Meter Tropical Band still goes up to 5060 kHz, and still has the same geographical usage as per WARC 1979? Yes, it's been a while but I was just wondering why there are a few US religious broadcasters using this band, especially WEWN on 5035. I can see one using 5070 as its not in the alloted tropical band, unless its been changed.

The first HD gear was cantankerous. It is now much better as the hardware
and software matures. Our 30 some stations are running with very few
glitches.

> Not to mention that anyone outside a few mile radius from the transmitter
> can't hear the digital signal to start with.

On AM in LA, the digital signal extends BEYOND the usable anlog signal. On
FM, it extends beyond the 64 dbu coontour, which is where there is almost an
iron wall beyond which listeners will not listen to a station.

> This is proven by anecdotal evidence of numerous people who have purchased
> the $300 BA (down from $500) and attempted to use it in their local signal
> areas.

All the currently available receivers have the first design spec release
circuits. The BA is just a bad implementation. The second generation, now
arriving from China and taiwan, is much more robust.
>
> Tell me something, Eduardo.. are people going to put up big outside
> antennas, or random wire AM antennas, just to hear a crappy digital signal

> full of artifacts?

They do not need to. And the signal sounds absolutely beautiful. Those of us with radios in our offices will not switch back to the analog version of our formats.

> I don't think so. The majority of listeners now are using boom box radios

The rollout is barely starting this month. And only in bigger markets. And the receivers are coming, and they sound great. Certainly better than some Tropical band analog kluge that will fade, be staticy in the summer, and be listened to by nobody.

> participating in the survey.

Arbitron uses a percentage of RDD calls (Random Digit Dialing) to know prefixes. This is to pick up unlisted phones in proportion with their presence in each metro. Some will be inactive. Some will not answer. Some will be faxes. So they perform enough calls to get the proper quota of unlisted numbers to get market proportionality.

Your modem call proves that they are trying to do this and doing it effectively. The fact they would not accept a callback shows they are conforming to the terms of the MRC certification, which is to not accept call-in participation.

Since nobody answered the modem, you were NOT contacted. Your phone line was attempted, and discarded when it did not have a human on the other end.

> Good for you. That makes one person out of hundreds that I know.

Add to that every broadcast engineer in LA that _I_ know. And there are some awfully good ones here. The HD signal on FM extends in usable form beyond the 64 dbu contour, extending the listenable range of stations. And on AM, it vastly outcovers the usable noise free signal for analog (which is somewhere between 10 mv/m and 15 mv/m in LA.

There are 13 AMs in the Jackson market. In revenues, the biggest is not even in the top 10, and bills less than $700,000 (The biggest FM bills nearly $5 million) Altogether, the 13 AMs do not bill as much as the #1 FM.

1950s Hallicrafters "Coffee Time" AM/SW Radio. Built in Chicago in the 1950s this vintage unit runs on tube technology and also includes a built in Clock. It has been tested and powers up and dials in radio stations ok. The Clock is working as well!It has some general wear , but no cracks, breaks or major dins. Just some natural scuffs and rubs. A nice radio for the collector.

It Dials in AM and Shortwave frequencies

Low Z generators are allowed into Medium Z inputs.

You cannot feed a Low Zinput with a Higher Z generator

Think of Impedance ''Z'' as the diameter of a pipe.

Watch all the obese BEER BELLY'ed hams waddle on by
in the parking lot flea market at the Hara Arena.

CLICKINZIE HERE: http://wa5kub.com

The camera was in operation today (Friday) and it's
2000% proof positive what the FDA has said all
along about the rampant obesity epidemic in America.
(makes you wonder how many Big-Macs they sell
this weekend especially in and around Dayton)

There is also an OPEN CHAT ROOM on the site where
you can comment on the goings on. Almost as much fun
as being there live.

Trust me folks, you'll see more middle-aged pathetic looking
white men than anywhere else, possibly except being
the local model train show or the next NASCAR event.

Not everyone belongs to a club.. in fact I would guess that the number of actual DX'ers that belong to clubs versus the ones that don't is an infinitessimal percentage. Most simply enjoy the hobby/activity and don't want to pay dues to join a club. I personally know 10's of dozens of such people, and my circle of friends includes a lot more than engineer types and hardcore hobbyists. I don't know a single person that has had your experience with IBOC, and a lot that have had the opposite experience. Portland IBOC can interfere quite well with adjacent signals (AM), but cannot be heard in the outlying areas that normally get very good reception. Several of the Portland stations (both AM and FM) have long been popular daily listens as far south as Salem, as far north as Longview/Kelso and as far west as Seaside, Tillamook and Astoria. To the east is a big problem due to topography. The AM IBOC signal can't even be heard without an external antenna as far as Beaverton or Troutdale, which are both part of the primary coverage (market) area.

Metal objects like your vehicle, metal fences and those RR tracks can
cause errors as well. I can hear LV down here in SoCal most nights.
Usually a good signal. How about a foto of LV if you have visited the site?

I will apologize for that crude attempt at humor Robert11; not everyone in this hobby is as juvenile & unhelpfiul. The schedules *seem* to follow the EST/DST conventions, but I'm fairly new to this hobby, so I may be off . . .

Real Radios are the old tube type analog Radios.They have knobs and analog dials on them.They DX much better than anything else.The have character and chirisma that NO digital/transistor so-called ''radio'' can ever touch.

See if Radio Shack (or some such stores) sell wireless frequency
counters.You can use them (wirelessy) with any radios,,, providing they
count low enough and or high enough.

This post may not be much help but that said using another MLB in
reverse from low to high impedance is at least theoretically correct.

Practically though you might be better off using a single insulated wire
from the long wire to the radio high impedance input as long as house
local noise is not an issue.

Go buy a good electric soldering iron,get a new stainless steel brush too.(it looks like a toothbrush) Get some pieces of scrap wire and practice soldering.Your local area libraries probally have some books on the subjet too.Soldering is really very simple and easy to do.Usually,I use an old electric wood burning tool/thingy to solder,because I like it much better.

hey GB,
put that dirty. smelly, tar encrusted brush away!

not all hams are as you portray..

still, when it comes to radio frequency emissions, the fcc made it a point
to have regulations in place to make it illegal 9and the begest of the
cellular companies) to monitor such emissions. now that they have moved on
th digital signaling, that particular law is now outdated (it is still
enforcable though ESPECIALLY if you are caught using technology
specifically designed to break encryption).

as for an ISP TOS agreement? not sure what bearing that has in shortwave
discussions....

WACX TV in Orange City Fl. has a 500 KW Onan diesel generator to
power their 195 KW transmitter, the control room, air conditioning and
tower lights in case of an emergency.

> Telamon
> Ventura, California

When I worked in CATV back in the mid '80s the line was, "A 20 Watt
TWT is worth $1,000 on the ground, and $1,000,000 in orbit". The Sat
owner would auction off the useful life of each of the 24 transponders
for about $1,000,000, depending on the type of bird, the shape of each
antenna, and its orbital parking spot. Most had two to six spare TWTs
that could be switched in when one of the 24 original TWTs failed, or
got too weak to use. The output power of each transponder was
controlled by the uplink power levels. The signals were uplinked in the

6 GHZ region, mixed against the onboard L.O. and retransmitted in the 4 GHZ region.

This is an abandoned facility a couple miles from here, and I want the equipment to add to my collection of unique equipment built by my former employer (Microdyne). How often do you get a chance to collect something with serial number 1? Also, it is the earth station that was used by Captain Midnight to jam HBO over 20 years ago, so its a piece of history.

In every market, we have had good HD experiences on AM and FM... NY, Miami, Dallas, Houston, Chicago, Phoenix, LA, San Diego, San Francisco, etc. All our engineers like it, and love the sound.

> Portland IBOC can interfere quite well with adjacent signals (AM), but
> cannot be heard in the outlying areas that normally get very good
> reception.

The HD signal exceeds the USABLE Am and FM coutours in every case... unless you are using the Boston Acoustics Receptor, which is a bad HD radio.

> Several of the Portland stations (both AM and FM) have long been popular
> daily listens as far south as Salem, as far north as Longview/Kelso and as
> far west as Seaside, Tillamook and Astoria. To the east is a big problem
> due to topography. The AM IBOC signal can't even be heard without an

> the primary coverage (market) area.

There are only a couple of receivers out, none with the second generation design specs. The first generation was a premble. It was not until this month that the HD consortium began promoting HD, and the new receivers will be in places like Radio Shack, Best Buy and Circuit City in the next 90 days

in stage three of the rollout (one was to put HD on enough major market stations, two was to get programming on HD-2 channels, and three is to start promoting to consumers). .

Tell us Mike Moron, why did it take Bush over five years to do something about the illegals. Just at the same time when even the Republicans finally came out of the closet about illegals. Do these bastards read newspapers? Did it take them 4 years to figure out there were at least 8 million illegals here in even 2002.

Just like when Bush tells you what to think? Or how to be a good hypocrite?

That's right, you don't quite understand that word. You know for a few
dollars you can get a dictionary to learn the meaning. Since obviously,
you're a wealthy Republican.

>>

They can market them all they want. I don't know anyone personally that will buy one. They're just not willing to spend the sort of money to replace something that's been working just fine for them. And I doubt seriously that much of the general populus will want to replace the 5-10 analog radios they already have just for a joke of a digital signal. You keep talking about the contours.. well, those may look good on paper, they don't work in real life situations. You'll learn that when people start tuning out of your stations en-masse. I know that personally, I will never spend the money on IBOC receiving equipment. I won't spend a cent to replace something that has always worked with something of questionable value in general and no value whatsoever to me. IBOC interferes with adjacent channel stations. This is just poor engineering, and something that would never have been allowed in the days when the FCC was composed of engineers instead of greedy politicians. I was just talking to a friend of mine on the Oregon coast who has been listening regularly to KONA in the tri-cities on 610 for decades. He can no longer listen to it because KPOJ 620 in Portland turned on their IBOC and is splattering 15KHz either side of their carrier. You can do your best to talk up this boondoggle, but most of us see it for what it is.. just another way for the NAB to screw the little guy, including the listeners. I think you'll find that rather than buy expensive new radios, that listeners will just turn off their radios and go to other entertainment modes.. this is already largely the case with Ipods, portable CD and MD players, etc. Most young people don't even own a radio anymore, it's too easy for them to get the music they want, load it onto a personal portable device, and hear what they want, when they want, without incessant DJ patter and endless advertisements.

>> In every market, we have had good HD experiences on AM and FM... NY,
>> Miami, Dallas, Houston, Chicago, Phoenix, LA, San Diego, San Francisco,
>> etc. All our engineers like it, and love the sound.

I call BS. I have personal reports that AM IBOC cannot be heard in downtown Manhattan on a display radio.

Our (AFN) engineers say their crap sounds great, too. Yet the AM is full of drops (not dropouts, the equipment actually shuts down for a half second every minute or so), it is also overmodulated, clipped and overcompressed. They also only feed one half a stereo feed into it, which makes it interesting to listen to. The FM in many plants is either out of phase (stereo mpx), shrill, or severely over or under modulated.

I'm a former broadcast engineer myself. I would be ashamed to claim I was anywhere near any of these AFN sites. Me internet radio station sounds better than any of them but their FM flagship, and it's only a 56K stereo stream, I don't EXPECT it to sound like a good broadcast station.

Actually I was contacted -- by mail. Got the dollar bill and
everything. But when I told them it wasn't my primary phone number
they lost interest.

They also sent the dollar bill and contact information to the water
system's billing address. The water association got a big laugh over
it.

Don't tell me I wasn't contacted when I was. Once again it shows you
to be in a bubble of unreality.

--
Eric F. Richards, efricha@dim.com
"Itï¿½s easy to fall into the trap of thinking that the purpose of a
business is to make money. But the real purpose of a business is to
create value. While itï¿½s possible to make money in the short run
without creating much value, in the long run itï¿½s unsustainable.
Even criminal organizations have to create value for someone."

From: Robert11 <rgsros@notme.com>
Message-ID: <WI6dnW8VjOv8gfLZnZ2dnUVZ_s-dnZ2d@comcast.com>
Source record: 75209

Hello:

Am a bit confused over what are the modes used by the Coast Guard
for the following:

345.0

237.9

326.15

379.05

Are these (all) FM ?
The last two are apparently air to ground, so are they AM ?

If someone could pleasae peg these 4 for me, would be most appreciative.

Thanks,
Bob

Alpha Delta has four position switches. See their web site. Or try the
Ameritron web site for really heavy duty.

Yeah, well, *extremely* heavy emphasis has to be placed on "noise free"
in order for this claim to be true. Otherwise it is patently false.

Unless you have unreasonably high standards for what counts as
'usable', this is simply false.

There is an organization for buying old radios sitting on velvet undies? Sounds like quite the esoteric little group. Do you pay dues and everything? It certainly sounds more heterosexual than the 'Listeners at the Gates of Dawn' members do.

While bandspread tuning can be calculated with some precision and accuracy, I hardly ever bother running the numbers. Analog radios are best at scanning the bands and I find them quite enjoyable without even looking at the dial. Consider a comparison between navigating the radio bands and getting around in your hometown. Do you really need to look at each of the house numbers in order to find your own home? Of course not. You know the distinctions between the different buildings even if they seem similiar to the casual observer. Finding your way with an analog radio isn't much different. With expirence, the sounds and locations of each station will become individualized. Radio B will be found between Radio A and Radio C (Assuming propagation is OK). However, digital readouts get you where you want to go without all the other stations.

I'm a signal browser and I prefer analog radios. I listen for a station's programming, language, voices and their general sound. I'm not usually interested in an exact frequency.

If you usually want to know the exact frequency your radio is tuned to, you're probably better off using a factory made digital readout radio rather than trying to interpolate a bandspread or trying to put a digital read out on your DX 160.

I've fixed up radios which looked worse than that. They all looked OK on
the inside. It's my guess the damage to the exterior is caused by humidity
and temperature fluctuations. Dew collects on the outside, soaks into
scratches in the paint and under the plating and eventually rusts the steel
underneath.

I'd worry most about moisture damage to the coils and conductive deposits on
the cirucit boards. It is a pig in a poke.

Message-ID: <5062419052006@newsclstr02.news.prodigy.com>
Source record: 75224

NASA is rehersing its faked mars landings by putting its film crews out in the desert to make initial test films. You can hear them on 149.56 here in Ventura on days when the tropospheric ducting is just right.

The plan seems to be to fake the mars landings that Bush wants in almost the same way that the moon landings were faked, and that really pisses me off.

Not only is unemployment lower now than at any time in the Clinton dictatorship,
but more people are working now as well. More people (especially the non-rich!)
are making more money now and getting to keep more of it.

> and the country was in 1000%

Anyone with a little intelligence can quickly see that the effects of the previous president's policies last about two years into the new president's regime. Democrats have used that to advantage for years. When they get into office, they take credit for two years for the benefits from the previous president's policies. Then when they run things into the ground and a Republican takes over, they complain for two years about how bad things are, and hope no one notices that it's their own boy's fault.

Bush not only inherited the Clinton depression, but also got stuck with 9/11 (brought to you by the Muslims who Clinton allowed to attack the US with impunity) and the resultant extreme financial woes, and instead of raising taxes and cutting defense spending like any Democrat would have done, he brought the country out of ruin and into prosperity despite it all.

> Well, I'm glad to hear that! Those economic indicators must explain why,
> as of the market close on May 17, Dow was *DOWN* a mere 214.

You mean back down to its approximate value for most all the month of
April, after a short anomalous peak.

The largest one-day percentage drop in the last 50 years occurred on
October 19, 1987 ("Black Monday"), when the average fell 22.6%. The
only larger percentage drop happened in 1914, due to World War I, at a
time when the New York stock market had been closed for six months.

Showing the trend of the previous presidency's effects lasting two years
into the new presidency, the Dow went from an all-time peak of 11,722.98
on January 14, 2000, back to its 1998 level of 8000. On October 9, 2002,
still within the two-year Clintonista hangover period PLUS ravaged by 9/11,
the DJIA bottomed out at 7286.27 (intra-day low 7197.49), its lowest close
since October 1997. However, by the end of 2003, when the Bush
Administration's policies had had a chance to take hold, the Dow returned
to the 10,000 level. By this year, US fiscal policies have enabled the Dow
to climb back to the 11,000 mark.

Clinton's excuse that he had no legal reason to hold OBL should have been
applied to Elian Gonzalez. Somehow he wouldn't take a world-class terrorist
out of action, but he managed to uphold world communism by abducting a
boy at gunpoint and returning him (against his mother's dying last wish)
to communism.

You're talking concepts. Conceptually, a front end is a front end, so all
receivers would have to perform the same if you're right. I'm talking
actual design, as in determining the circuit topology and calculating the
component values, and I'm betting the FR200 didn't hit paper before 1995.
It's the actual circuit topology and component values used that actually
determine sensitivity. And incidentally, PLL designs date back to the
1970's; I still have clippings from the tech journals of that period.

Funny, you liberals never seemed to mind when they stifled the mention of anything remotely religious. But when it comes to spreading propaganda lies to malleable, trusting young minds, you're all for that.

The bozo still has freedom of speech. He's just limited as to time, place and manner, i.e. he has to say it outside of school and he's not allowed to teach children any fantastic lies he can conjure.

Now, there you've got something. No matter how hard the good cops (probably 99.9% of them) work, there's always some nasty, power-mad clown violating the law in the name of her own self-aggrandizement. I hope that cop is fired, sued and jailed. I hope mothers turn their babies' faces away from that jerk, and bums spit on her.

I would not expect you would. Niether do I.. The consumer martketing just
began this monthy. It's in a very early phase.

>> They're just not willing to spend the sort of money to replace
> something that's been working just fine for them.

What sort of money? You obviously don't know the price points of the next
wave of receivers.

> And I doubt seriously that much of the general populus will want to
> replace the 5-10 analog radios they already have just for a joke of a
> digital signal.

A signal which sounds better, doubles the FM station count, and gives AM
decent quality. And it's "digital" which means a lot to the consumer.

>You keep talking about the contours.. well, those may look good on paper,
>they don't work in real life situations.

That's amusing. We have two dozen of these on the air already, and in every
case, the usable contour is greater for HD than for analog. The biggest
benefit is to major market AMs where the ambient noise level means coverage
is very limited. For FMs, we are finding a usable HD signal that goes beyond
the 64 dbu, which is where almost all rated listening stops on analog. And
rated listeners are all we care about, as that is how we make money. And
that is the way it has been of 80 years or so.

>You'll learn that when people start tuning out of your stations en-masse.

Funny, but nearly all our stations were up in Winter, including the HD
enabled ones. Addin HD does not affect the ratings of the analog signal. It
just expands th epotential for the future.

> I know that personally, I will never spend the money on IBOC receiving
> equipment.

Since you don't even know how much it will cost in the next 18 months, that
is a ludicrous statement.

> I won't spend a cent to replace something that has always worked with
> something of questionable value in general and no value whatsoever to me.

Most people will feel that having twice the FM "stations" is well worht it.
One time cost, tangible gain.

> IBOC interferes with adjacent channel stations. This is just poor
> engineering, and something that would never have been allowed in the days
> when the FCC was composed of engineers instead of greedy politicians.

Since there is scan evidence that the adjacents are being listened to in the
areas where the interference happens, this is irrelevant.

> I was just talking to a friend of mine on the Oregon coast who has been
> listening regularly to KONA in the tri-cities on 610 for decades. He can

> best to talk up this boondoggle, but most of us see it for what it is..
> just another way for the NAB to screw the little guy, including the
> listeners.

Actually, this was not an NAB project. The promotion of it is not NAB. The
engineering was not NAB. A bunch of group owners decided that radio had to
move into the digital domain, and financed iBiquity's early stock offerings.
Some of the early adopters are small, like UnoRadio Group, a Puerto Rican
company that is owned by a lifetime engineer who believes this is the best
hope of radio for the future.

So few people listen to far-off signals and so many will leave radio
altogether if we do not modernize delivery that this is a small price to pay
to stay off obselecence.

> I think you'll find that rather than buy expensive new radios,

They will not be expensive as they roll out. My first CD player was $1,400.
My first DVD player was nearly $700. My first VHS was over $800. My first
walkman CD player was nearly $300. Now there are $19 DVD players, $14 CD
walkman players and nobody wants a VHS device.

> that listeners will just turn off their radios and go to other
> entertainment modes.. this is already largely the case with Ipods,
> portable CD and MD players, etc.

Which have been studied and found to not compete with radio, but, in many
cases, create more radio listening. Just as 45's and cassettes and CDs did.
They are complimentary.

> Most young people don't even own a radio anymore, it's too easy for them
> to get the music they want, load it onto a personal portable device, and
> hear what they want, when they want, without incessant DJ patter and
> endless advertisements.

Radio does not program to young people. It can not afford to. Yet, 93% of
teens use radio weekly, so your data is just about totally wrong. You have
some kind of emotional reaction to this that does not allow you to see the
reality of pricing, radio usage or the "digital" phenomenon.

I know ESB stations that can not be heard in stores 6 blocks away. Manhattan is a horrible place for FM.

The fact is, our WCAA on HD has better usable coverage and better building penetration than the analog signal.

As I have said, we are finding this to be uniformly true, which is why nearly all our 70 stations will be HD by the end of next year.

I just checked with a person at Arbitron. The MRC approved methodology is
phone contact followed by mailing of a BOX with the diary in it along with
the incentive, phone confirmation of receipt, phone follow up after day 1,
phone follow up after weekend, phone follow-up on Thursday for completion
and mail-back.

Listeners do no significantly use metro AMs outside the 10 mv/m and FMs
outside the 64 dbu, with 85% of listening in the 70 debu. The HD signal
exceeds this.

We had our highest total ratings ever in Winter 2006. The advertisers are
happy. Our company was awarded the only A+ for ratings performance by an
investment firm that tracks radio as an industry.

>> The HD signal exceeds the USABLE Am and FM coutours in every case...
>> unless

> 'usable', this is simply false.

My standard is the contours where listening occurs. there have been plenty
of studies of where most listening occurs, and where the drop-off contours
are. Most of us have been tracking this sort of stuff since the 70's.

I'm curious as to what other portable radios currently on the market you'd consider to be better at basic DXing parameters such as:

-stability and tuning step suitable for ECSS tuning
-IF shift for QRM avoidance
-good sensitivity with decent IP3
-weak signal S-AM locking with selectable sideband
-three or more useful bandwidths

The AR7030 doesn't count... it's not a true portable with batteries and integral antenna. The Palstar R30 has batteries but no antenna; it's a shame it lacks S-AM and IF shift.

What DX catches can you list, that you've heard with the better portable you have in mind?

I rarely respond to trollers...but *maybe* an interesting discussion will come of this.

Also, if you're interested in a real discussion of radios, what's your real name, Mr. Radio Buff?

I just bought a Black & Decker "Storm Station" all-in-one Rechargeable Power Source / Radio / Light, from the local Wal-Mart here in Michigan for $ 98.76. The device has a AM-FM-TV and NOAA Weather band radio. Built-in Inverter, and a 12 volt outlet. Also a removable and rechargeable flashlight. I charged the device up and tuned-in the local and not so local radio stations. It's not a red-hot DX machine but it does do the job very well. I suggest that those of you who are in Hurricane Country should buy one of these radios NOW... and be ready for the next killer storm. The Storm Station radio from Black & Decker will do the job for you very well.

Best Regards,
Roger 507

here's a guide to give you the best chance of getting on air:

At

http://www.radiotalkback.net/

talkback on the net

Say your first name (don't ever quote your surname) and where your
calling from.

Don't use offensive language.

Keep the whole response under 1 minute

and send it to

talkback@zfm.com.au

By talking email
.
Don't defame any person by name. What you are saying must be a reasoned
opinion.

We reserve the right to edit any audio contributed (without changing
its overall meaning), or to reject any audio as unsuitable.

Hints and Tips
Hi - Welcome to Talkback Topics on Radiotalkback.net I'm Phil.

For my Talkback Copy I prefer to look for subjects that appeal to
Mainstream Australia, in that I mean subjects such as Health, Drink
Driving, Education, Petrol Prices and the many things that affect the
lives of every day Australians. The net is not my only source as I also
read newspapers, watch news items on television and listen to ABC Radio
in particular.

I fully agree that every person anywhere else for that fact, has the
right to be heard and Talkback on the neyt is the perfect medium to
be able to say your bit. Who is right and who is wrong is really up to
what the majority of replies think so it is also a good measure of
sanity for any subject.

All the Details are at

http://www.radiotalkback.net/

I used to live near the Wabash River in Terre Haute, IN. I never figured out why people made such a big deal of it. There never was any moonlight on the Wabash either because it ran in the wrong direction to reflect much moonlight, and I never saw any candlelight to make me long for my Indiana home. People had electricity. I did catch some catfish though and then I wound up in the Pearl River swamp later on. After that, I got caught by hurricane Katrina and my wife moved back to Indiana because she hates hurricanes and me. Especially me.

Somehow, it all got started with the Wabash. I hate the Wabash.

The train probably sucks too.

For 100$ you can get a big honkin deep cycle battery that lasts 100 times longer plus a decent AM/FM/WX band radio radio with a 12 volt external jack and a newfangled LED flashlight that lasts for 30 days of solid running from one set of batteries.BTW the inverter is only rated for 25 watts and really sucks the life outta the system.....so if its anything bigger than a cell phone charger forget it.....forget it anyway in a hurricane because cell phones dont work after the first good wind! You can buy a cable for your cell phone and run it from the battery direct for about 6 months of talk time!...If you still have service that is.

The Black and Decker is a good deal for someone that knows not what a positive and negative battery terminal is but otherwise they dont last long and are pretty expensive for what you get.

BTW the flashlight takes 16 hours to recharge fully from the storm station and in best conditions the entire radio/flashlight sytem lasts only 2 or 3 days till its too weak to be used....Its ok for a simple thunderstorm if your afraid of the dark but not worth the bucks for a major catastrophe.

It's a good light-duty device for those who don't have anything in the line of emergency equipment. I know it has limitations, so does everthing else. We had a Class 5 Tornado pass right over this house in 1956 and I remember it very well. I presently have a bank of deep-cycle batteries as well as three (3) small gasoline generators and a pile of Ham Radio equipment for both Base Operations and Portable use. The Black and Decker "Storm Station" would be a welcome addition to a basement shelter for a short-term emergency/survival situation.

Best Regards,
Roger 507

True, but I must have counted close to 40 (fourty)
morbidly obese hams seated in those motorized Scooters
that I saw zipping by the HamventionCam today.
Many of them stopped for the camera, got up mugged
4 the camera, then hopped back on and zipped away.
(funniest was the guy pulling a red wagon behind his Scooter
that had a couple of big astron power supplies in it.
Guess he needed one to re-charge the battery ? (grin)

You mean the guy from Ypsilanti? I HOPE he does come on.
He's a true loon that's 2 cans short of a six-pack. Great fun
to listen to fer sure!!

Joke time for the kids:

A tourist walks into a curio shop in San Francisco. Looking around at
everything, he notices a very lifelike life-sized
bronze statue of a rat. It has no price tag, but is so
striking that he decides he must have it.

He takes it to the owner and asks, "How much for the bronze rat?" The
owner replies, "$12 for the rat and $100 for the story".

The tourist gives the man $12 and says, "I'll just take the rat, you
can keep the story."

As he walks down the street carrying his bronze rat, he notices that a
few real rats have crawled out of the alleys and sewers and begun
following him down the street.

This is disconcerting, and he e begins walking faster. But within a
couple of blocks, the herd of rats behind him has grown to hundreds, and
they begin squealing. He begins to trot toward the Bay, looking around
to see that the rats now number in
the MILLIONS, and are squealing and coming toward
him faster and faster.

Concerned, even scared, he runs to the edge of the Bay, and throws the
bronze rat as far out into the water as he can. Amazingly, the millions
of rats all jump into the Bay after it and are all drowned.

The man walks back to the curio shop. "Ah ha," says the owner, "you
have come back for the story?"

"No," says the man, "I came back to see if you have a bronze Mexican,
a bronze Muslim cleric, a bronze Republican & anything French.

They are on 3.950 outgassing as usual with the same
old tired bunch of rejects. Only bright thing is thi keeps
them behind the microphone at home instead of out
at the Legion or VFW Post till 2 AM when they go home
drunk driving and wrap themselves around a tree or
t-boning a carfull of kids at an intersection.
>
A "carfull" of kids? Out at 0200? Not likely.
Still, it is funny to listen to FAM (Father And Mother) carry on and on and
on and....

I wonder if the Conspiracy Nut from Michigan will be on? He's a great source
of laughs.

Source record: 75178

For One and All,

The Spiro-Helical Antenna -by- Idine Ghoreishian
http://scholar.lib.vt.edu/theses/available/etd-120899-112725/unrestricted/etdig.pdf
Spiro-Helical Antenna => http://tinyurl.com/ga75w
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9625

Warning this "Thesis" is 89 Pages long and does get
a little too technical for persons like myself who tend
to try and Keep It Simple And Practical. {KISAP}

This new Spiro-Helical Antenna has radiation characteristics
comparable to those of a conventional Helix type Antenna;
but occupies a much smaller volume.
Spiro-Helical Antenna => http://tinyurl.com/ga75w

Spiro-Helical Antenna is made of a Primary Helix Shaped
{Slinky} into a larger Helix {Double Slinky}; thus a the
resulting Structure has with Two (2) Degrees {forms} of
Helicity.
Spiro-Helical Antenna => http://tinyurl.com/ga75w

This Antenna is named the Spiro-Helical Antenna.
Spiro-Helical Antenna => http://tinyurl.com/ga75w

RHF HAS A VISION - THE SPGC ANTENNA :
My KISAP 'view' {Minds Eye} of this Spiro-Helical Antenna
is to "Think" of a standard Slinky {smaller Helic} wrapped in
a larger Helic around a Plastic Garbage Can with about Six
Inchs Spacing between the Coils of the larger Helic. This
should be 'about' Six Large Turns of the Slinky around the
Plastic Garbage Can.

Note - I call this KISAP application of the the
Spiro-Helical Antenna : The SPGC Antenna for
Slinky Plastic Garbage Can (SPGC) Antenna ! :o)

Now put that SPGC Antenna on your Roof or Balcony or
even invert it on a piece of PVC Pipe in the Backyard.
Tell all your neighbors that it is a new Wide-Band High
Definition Television Antenna for both Off-the-Air and
Satellite TV Signals that you are designed; and you will
be Saving a Ton-of-Money on your monthly Cable and DSS
Bills by using it. Mention that the SPGC Antenna also
has the latest IBOC signal capturing features for both
AM and FM Digital Radio. Plus add-in the fact that the
SPGC Antenna has DRM Sky Wave signal capabilities built

into it for Shortwave Listening from around the World.
XM and Sirius Satellite Radio - No Problem with the
SPGC Antenna just put their little antenna inside the
SPGC Antenna and you got em.
Wow - When they say : What-the-Heck ? - Refer them to
the Paper written by Idine Ghoreishian on the Spiro
Helical Antenna => http://tinyurl.com/ga75w

oh my poor brain - all these spiros and helics
are making me just a little dizzy - iane ~ RHF

PS - If you claim that all you Hear is Garbage on your Radios;
after you started using the SPGC Antenna - Don't Blame Me
After All You Are Using a Garbage Can for an Antenna ! :o)

As I said, they do not recruit by mail. The phone call is what decides whether you are going to get the diary or not. There are a battery of questions asked on the phone call, starting with the media household question, that can ace or nix the participation. The letter is merely a setup for the phone recruit. If you are in a cell they have filled quota for, you are out (age, ethnicity, sex, geography). If the data for the contact does not match the data of the contact, they nix you (to keep the "letter" from being passed around). And so on.

Just in case you missed it... the mthodology is based on acceptance of a person / household via the phone contact.

The letter is an experimental procedure, used to see if it will increase participation at the time of the recruitment call. The real incentive is sent with the diaries.

>> I just checked with a person at Arbitron. The MRC approved methodology is
>> phone contact followed by mailing of a BOX with the diary in it along
>> with
>> the incentive, phone confirmation of receipt, phone follow up after day

As I said, the letter is a pre-contact to "warm the welcome" when the
recruitment call is made. If anything does not match, they nix you. And that
means using a different phone, because you could have passed the letter to a
friend. In any case, the letter is an experimental technique to increase
response rates and not generally used.

6023. Re: Grove's Flex-tenna

Any old thing works fine on modern portable SW's, as far as pulling in signal. You can't get extravagant or most receivers will overload with the strong signals around and give you horrible images all over the band. So the modest wind-up antennas are about the best you can do.

You get differences in rejection of local noise, and for doing that you need grounding and matching transformers and distant antennas, or some ability to steer a null on noise sources at least, to get away from the local sources somewhat.

So I expect the feature here is invisible wire, the better to meet the local homeowner association objections or the wife's moods, and beyond that it's a reel antenna that comes with some portables, but they have black wire you can see and this doesn't.

No argument. That is not a recruitment, though. It is a warm up. There are a whole bunch of hoops you have to jump through to actually be part of the survey.

6025. Re: bandspread tuning tutorial?

Newsgroup: rec.radio.shortwave
Date: 2006-05-21 07:52:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <44701C1C.84F@mindspring.com>
Source record: 75183

Everybody (except Collins receiver owners) used to have a crystal calibrator, a little black metal box with a vacuum tube on top, that put out a signal every 100 kHz (100 kc in those days). You'd set the bandspread to 0 and tune the main tuning until your 100 kHz signal was heard, the idea being that the main tuning was accurate enough to distinguish 100 kHz frequencies so you got the right one.

Then tune with the bandspread and take the frequencies off it as offsets from the main tuning frequencies. That is, the bandspread does the part below 100 kHz and the main tuning does the part above 100 kHz, in the constructed frequency.

You'd either leave the receiver on, or recalibrate as it drifted, as you use it.

If you know a station's frequency, you set the bandspread to the 100 kHz part and tune the main tuning to hear the station, and then that calibrates the receiver instead of the crystal calibrator.

Basically listening was partly calibrating the receiver and partly tuning for stations, if you were interested in what frequency you were hearing.

> that is a ludicrous statement.

And how can you call it a ludicrous statement? It is a proper statement of FACT. will never purchase an IBOC device. will never listen to an IBOC signal. I am sick to death of having digital crammed down my throat when it is universally inferior to analog as far as listenability. I would much rather hear a bit of static on AM radio than the digital artifacts that exist in AM IBOC. I'm sick of digital satellite television with artifacts and pixelization and dropouts in even the most modest of rain storms which would have at most produced a bit of sparkling in the old analog satellite television. I have real world reports that the systems you push so hard do not work in areas where analog does.

>> I won't spend a cent to replace something that has always worked with
>> something of questionable value in general and no value whatsoever to me.
>
> Most people will feel that having twice the FM "stations" is well worht
> it. One time cost, tangible gain.

Again, for most I do not believe it will be a gain. More of the same old crap for an additional investment of any kind is not going to sway people to buy IBOC radios. If it were so that they would do so, then the numbers for XM and Sirius would be a lot better than they are, and they wouldn't be trying to give away radios to get people to subscribe.

You also presume that radio stations are going to spend the money on the additional programming sources to add to IBOC FM. I rather believe that most stations will opt to stay with their one basic programming source.

>> IBOC interferes with adjacent channel stations. This is just poor
>> engineering, and something that would never have been allowed in the days

Whether or not anyone, in your small version of the world, is listening or not, it's still piss poor engineering practice to splatter 2 or 3 channels away from your own. There's no way you can possibly make a silk purse out of that sow's ear.

>> I was just talking to a friend of mine on the Oregon coast who has been

In case you hadn't noticed in your myopic view, young people make money,
they buy things. They also get older, and build into your narrow
demographic. I know lots of young people, and I doubt that 10% of them own a
radio. They own mp3 players. They read magazines, and buy CD's or download
mp3's based on name recognition.

I was there for 4 hours on Saturday.
Nothing but old test equipment and computer junk.
Only reason to go anymore is to meet people, albeit an
expensive one. Never again will I goto Dayton.
It's day has ended, period. E-Bay and private ad's on places like
QRZ.com have killed it. Not worth the effort anymore.

The last time I was at dayton was 1987, and it sounds like it hasn't changed. It was always a place to find parts and equipment. In the early '80s it had a couple years where it was mostly C-band sat TV equipment, parts and kits. In the '70s it was mostly military surplus and half finished assemblies, along with older tube type ham equipment. What you find depends a lot on the economy, If its been good for a while, there is more good used equipment. Also, the newer radios fail a lot faster, so less make it to the used market. Some of the mail order dealers don't have any real inventory, so they have nothing to take to hamfests because they ship fill their orders as fast as their stock comes in.

I got one for $49.97 (got the rubbery paint, so it's a newer one).

One thing I noticed immediately is that the wall wart makes lots of
noise and the radio hears much better without it. Sound quality is
quite good and overall fit and finish is very nice.

Sure it is. I went straight to the web site and started answing
questions. When the website told me that the phone number wasn't
mine, I called the number, and was told that because it wasn't my
primary phone number I couldn't take place in the survey. Just a
little bit of error checkign would have fixed that.

Your claim that "Arbitron does not recruit by mail. Ever." looks
pretty weak -- call it a prerecruitment, a warm up, whatever -- it was
a solicitation for me, er, my computer to participate.

The letter is not the "recruit". It is simply a warm up, just like pitches in the bull pen are not part of the actual baseball game. The recruit comes when there is a call back and verification of the individual, household, phone number and determination if that household is needed in the sample.

So, you were NOT accepted. In other words, there was a recruit process
following the letter. Just what I said.

You were kicked from the sample and not recruited because the number did not
match. This is part of recruit screening to avoid "sample swapping" where
one respondent takes the place of another.

There are various other things beyod the phone number that could have also
resulted in your not being accepted.

>
> Your claim that "Arbitron does not recruit by mail. Ever." looks
> pretty weak -- call it a prerecruitment, a warm up, whatever -- it was
> a solicitation for me, er, my computer to participate.

No, it was, if you want to use your terms, a pre-screening "invitation" to go through the recruitment process. You were NOT accepted via the letter. You were asked to call or log on, and in your case, you were not accepted in the sample. There are many other reasons for non-acceptance, so the letter is an invitation. It is not a guarantee that you will be used. Therefore, it is not recruitment, only a set up or staging to enhance the likelihood that the person will be able to be contacted for recruitment.

> that exist in AM IBOC.

This is certainly circuitous thinking. You would not buy and would not
listen because you have determined without doing either that AM HD sounds
bad. Actually, it sounds far better than analog, and the current revisions
of the algorithm are quite nice sounding. Beats the hell out of what we have
in LA on analog, which is 25 mv/m signals being trashed at intersections
with LED stoplight control boxes and noisy power lines except the 15 days a
year when it rains.

> I'm sick of digital satellite television with artifacts and pixelization
> and dropouts in even the most modest of rain storms which would have at
> most produced a bit of sparkling in the old analog satellite television. I
> have real world reports that the systems you push so hard do not work in

And we have actuall empirical evidence, rather than "reports" that may have
been based on early iteratins of the system, that both AM and FM have usable
signals in most cases greater than the usable analog signals.

>> Most people will feel that having twice the FM "stations" is well worht

XM and Sirius cost over $150 a year, outside the receiver cost. HD-2
channels, which are popping up on nearly every HD station int he launch
markets, are free and almost all offer formats not available in the market.
It essentially doubles the FM format offerings. For example, NY has oldies,
not available on the analog band, as well as country, classic salsa an
"real" jazz, to name a few that are not available on analog. Many markets
get thire first AAA station, or replace a lost oldies station, or get urban
AC for the first time. Free.
>
> You also presume that radio stations are going to spend the money on the
> additional programming sources to add to IBOC FM. I rather believe that
> most stations will opt to stay with their one basic programming source.

They already are. Nearly 100% of NYC commercial stations have HD-2 already,
and non-coms like NPR were actually hte first in.

Keep in mind that the roll out is by market size. First the big ones, and
then a move to medium and smaller ones. Over 60% of all Americans 12+ live
in the first 50 markets, by the way, so just covering them in the first two
years is considerab&#65533;le.
>>
>> Since there is scan evidence that the adjacents are being listened to in
>> the areas where the interference happens, this is irrelevant.
>
> Whether or not anyone, in your small version of the world, is listening or
> not, it's still piss poor engineering practice to splatter 2 or 3 channels
> away from your own. There's no way you can possibly make a silk purse out
> of that sow's ear.

Since the adjacents are not being used, we are making better use of them.
This is no different than a store that generates no business... it goes
broke and the location is used for something else. In this case, the
adjacent is not being used by listeners, per measurement of audience in my
very big world of the entire US and Puerto Rico, so we are going to use it
to improve radio for the people who do listen on the stations they listen
to.
>
> In case you hadn't noticed in your myopic view, young people make money,

Teens have essentially no money spent against them by advertisers. I really
don't care whether teens and 55+ persons have money, since the fact is that
advertisers and their ad agencies do not spend any radio money against them,
which is why they are not targeted by radio. If nobody rides a hores into
town, you wil not have a need for a livery stable.

> they buy things. They also get older, and build into your narrow
> demographic.

And, amusingly to be sure, they listen to radio when they have jobs,
families and a busy schedule that does not permit spending as much time
feeding the iPod, etc. Again, over 90% of teens actually do listen to the
radio, so your contention that they do not is absurd.

> I know lots of young people, and I doubt that 10% of them own a radio.
> They own mp3 players. They read magazines, and buy CD's or download mp3's
> based on name recognition.

Your anecdotal evidence is, thus, better than an Arbitron survey of millions
of listeners a year?

He's been an idiot ever since I first came across his fake name in print. He generally gets his ass handed to him in most every 'dicussion' he enters into.

How he ever made it in the field he's working in is just amazing. But then again, one must factor in who he's working for and who their target audience is.

Remember, he's 'HFBPO' (Hispanic For Business Purposes Only).

Translation: you are a racist. When Univision beats 2 of the 4 major TV networks in prime adult demos, it is hardly an audience group or a network that you can successfully belittle. And when the same company has 3 of the top 10 stations, including tow of the top 4, in Los Angeles, and is top 5 in markets like san Diego, Houston, Phoenix, Dallas, Chicago, Las Vegas, San Antonio, Miami, it is further hard to dismiss us. By the way, an industry person who gives a "grade" on ratings performance gave us the only A+ in the Winter Arbitrons, the only radio broadcaster to earn that grade.

What have you done lately.
>
> Remember, he's 'HFBPO' (Hispanic For Business Purposes Only).

I grew up Hispanic. Hispanic is a culture, not a race.

I have only been to Dayton once and found it interesting. If I was
within 200 miles I would probably go there every year but being on the
other side of the country once will have to do. The Flea Market is nice
but that cannot be the only reason for one to go to Dayton. There are
numerous other activities going on all the time and I believe if one
goes to Dayton they should make them the main priority instead of the
Flea Market. Almost anything can be bought online nowadays so to go to
Dayton to haul home a car full of junk just doesn't make since anymore.
So how about a Dayton without a Flea Market ? Are we all so much
into the Junk of our Hobby that we forgot the human element?

Just my two cent worth.

I'm at a loss as to why in the age of digital radios one would buy an analog radio only to go to the added expense of a digital display. Why don't you enjoy the 160 for what it is and not try to make it something that it can never become. We all enjoy the point and click accuracy and speed of keypads and up/down tuning keys on digital radios. The 160 will never be able to come close to competing with that. Just use the 160 radio in the way it was designed: Scanning the bands by listening as much as glancing at the analog scales.

The 3 stations owned by the Mother Church were: WCSN in Scott's Corner's, Maine, WSHB in Cypress Creek, South Carolina, and KHBI on Saipan, in the Northern Mariana Islands. WCSN was put up for sale by the Church in August 1993, and eventually sold to Prophecy Countdown, a Florida-based Seventh Day Adventist ministry not affiliated with the mainstream SDA's in early 1995. The SDA's operated the station under the call letters WVHA, and changed the station location to Greenbush,Maine. When the SDA's were late on the loan payments and the electric bill, the power was shut off and the lender foreclosed on the station. Ultimately, the station was sold to LeSea broadcasting of South Bend, Indiana. KHBI was sold in the summer of 1998 to the US government, primarily for Radio Free Asia transmissions to Asia. Finally, WSHB was sold to LeSea 2 years ago,replacing their original station, WHRI, in Nobelsville,Indiana. I hope that some of you remember my reports about the CS stations and Monitor Radio that were broadcast on Glenn Hauser's " World Of Radio."

XM and Sirius are doing quite well signing people up. Faster than DBS
was 5 years into their start-up. Over 10 million subscribers and
adding over 10,000 a day. Nobody's giving away ''free'' receivers
right now, AFAIK.

I have both these rigs fully accessorized. The 515 has the sherwood filters, speaker, keypad controller, memory unit, 10-turn pot, etc. The R7A has speaker and all the Drake filters for SWLing and the RV75. I also use Sherwood's SE-3 Synch Detector with both rigs. I'm contemplating (lighlty) to sell one of them but I"m having a hard time with choosing. They are both unique in their own way. Both are 5-Star rated receivers. What do you guys think?

Some of the dealers are giving away receivers, since they get a commission
on the service itself. But I do not think XM or Sirius are subsidizing any
plans right now.

Well, its a 2000 mile round trip these days so I simply can't go. I did go almost every year from 1970 to 1987, when it was a little over an hour's drive. I bought tools, parts, manuals, databooks, test equipment and things I couldn't find at any of the local distributors or surplus dealers. I made the circuit inside to talk to Motorola and several dealers, but 95% of my time was spent going through the flea market. I could by new parts for 10 to 205 of what they would cost from a local dealer, so I would buy a lot of my inventory for the year, if the price was right. Where else would you buy a pair of new enclosed racks worth more than $1200 for $75 from a company that had just gone out of business, or a nice scope for $5 in those days?

It's a method of jamming. So find a list of all the broadcasts aimed
at China that the government there doesn't want the people to hear.

< Snip >

The spiro-helical antenna is just a shortened version of a helical
antenna.

Your SPGC concept is unworkable, the elements are to close together.

A helical antenna on short wave frequencies would be physically huge.
This antenna design is practical for very high frequencies with high

gain and directionality.

I suppose it might be reasonable to make one for short wave with two or three turns but I don't think it would be worth the effort over just making a loop antenna.

Recruitment never implies acceptance.

You can spin this however you want, but they solicited my input, by
letter (in direct contradiction to your statements) and the phone
number mismatch caused them to drop the solicitation -- even though
every other fact matched, and it was, after all, my number. It's just
not connected to a phone, that's all.

Spin as hard as you want -- it just shows how far out of touch with
the actual listening public you are.

Whew! - what a choice - two of the best receivers ever made.
I think my money would be on the awesome R7A though, as if kitted out with
the right filters it's performance even today is really great.
It's synchro is also a wonderful feature and it's ability to get that really
faint far distant exotic DX is legendary.
A pal of mine has a R7a and on DXpeditions he always ran rings around us.
Unfortunately he has hung up his headphones, but refuses to sell his Drake.

A tough choice though.

Welcome to the club!!

Someone else is impostering me with my e-mail address. This one is a
spam catcher.

I'll never post on any the these groups again using a good e-mail
address.

Les Locklear

I have had both here, the 515 I've owned for over 20 years, it will
never leave. I borrowed my friend's fresh from Drake serviced R7a, and
while it might have slightly outperformed the 515, it's a PITA to use,
and I liked the audio even less than my 515 running through a cheap
stereo amp and a RS Minimus speaker, an dmy 515 doesn't sound all that
great.

I have had many SW receivers over the last 25 years, and the 515 is the
only one I would really miss. Even though it needs an alignment pretty
bad right now.

Looks like the guy running the open sever closed it so the guy
impersonating me can't post from there. At least I can't connect to it
now.

Friday I sent emails to the abuse/help/support of the person running the
open server and all addresses failed so at that point I posted on his
own forum. I requested the impostor be blocked and that he send me the
impostor's IP trace information. The post to the forum on the open
server was successful but at that point I was annoyed to the extent that
I copied the guys ISP and the ISP's broadband provider as I consider
then all liable for this abuse.

I gave the person running the open server ten days to turn over the guys
IP information so I can follow up on tracing guy that made the vile
posts with my email address and other header information to make it look
like I made the posts.

Yeah I saw that Les. He used the same open server to spoof posts so they
looked like they came from you. You post from Google servers and the
impostor posted from an open sever in Italy if you check the path header
you will see this.

I don't like belonging to this club so I am starting a new club that
goes after these impostors. There might be more people than just us two
people that were abused by the same guy.

Tough decision.

I have both. As far as performance goes, I think the R7 has the edge.
The R7 has a notch filter and the 515 doesn't. The R7 has a good noise
blanker, while the 515's noise blanker is generally useless. The R7
seems to be more sensitive at lower frequencies. However, the 515 is
built like a tank and should last longer. My R7 has had 2 component
failures already, while the 515 just keeps on truckin. New receivers
come and go, yet none of them seem to have the "magic" of the R7 and
515. Maybe it's because they're both real radios instead of computers
with RF circuitry thrown in.

If I were you, I'd keep them both. Otherwise, it's a coin toss.

Sure it does. You are not recruited until both sides agree. Until then, you
are a prospect.

You do not know that, since the phone caused you to NOT be recruited
immediately. You might not have been in the desired quotas, for example, on
age, sex, ethnicity or location. You do not know.
>
> Spin as hard as you want -- it just shows how far out of touch with

I am actually writing this from Columbia, MD, where I will be spending the
week at Arbitron discussing, among other things, methodology issues with the
designer of the diary sample frame. I do this many times a year. I have even
done work for Arbitron in Mexico, training new subscribers on using the data
and understanding it.

Eduardo is a given name, not a surname. It is the name given at the time of
baptism, and the name of a saint.

Because, today, and the dictionaries I have agree, "race" is used as both a distinction of race (black, Asian, white, etc.) and group (the German Race) and has been for half a century. By that definition, discriminating against Hispanics is racist. The traditional usage would suggest "bigot" as the correct term, but that is far less used these days. So, I guess you are a racist bigot, if you want to get technical. Hell, man, you even hate Canadians.

From age 14, I lived in Latin America almost all of the last 45 years. I did high school and college mostly there, and my kids don't even speak with me in English. what would you call that when referenced to "dominant culture?"

By the way, you forgot the "Eduardo" after the "David." And the ancestors that gave the "Gleason" surname were from Galicia, where the Celts were "in residence" for quite a long time.

6122. Drake R7

Newsgroup: rec.radio.shortwave
Date: 2006-05-21 19:43:13 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <4470C2D1.242A1A53@milestones.com>
Source record: 75328

I'm wondering if anyone out there has my original Drake R7. It was serial #2751.
I still have the QC tag from it dated May 28, 1981.

I had put some R4245 knobs on it, and it had the AUX7 board installed.

If I recall correctly I had it set up with the 6, 4, 3, 2.3 and 1.8 kHz filters.

The one I have currently is #1164, with the 8, 6, 4, 3 and 2.3 kHz filters.

Something in the band switch circuitry and something driving some of
the LED segments (I forget the exact components, maybe a cap and an
IC?).

I interned in Mexico City at age 14, and the at age 17 built my first radio
station in Ecuador while still at the Colegio Americano there. Nice try.

Now you are going to move into revisionist history? So the Celts were not in
Galicia? Interesting. They still speak a version of Gaelic there.

You are the Usenet equivalent of the schoolyard bully. Not enough ethnic minorities in your part of the woods to pick on, so you had to come here?

you got that right
>Not enough ethnic
> minorities in your part of the woods to pick on, so you had to come here?

but i think you mised here.

I susect his problem is there are too many in his area both for his
taste and more importantly for him to dare tlak like he types here.

not flaming you but a bit of correction I think

Yes, he did. He thinks I'm picking on a minority or an ethnic group, when actually I'm picking on him because he's a charlatan.

However, it's in his best interest to try to portray me as picking on a minority or an ethnic group because that's the best defense he has at the moment.

6138. [OT] Mystery CW sig on LW

Newsgroup: rec.radio.shortwave
Date: 2006-05-21 20:30:45 UTC
From: Ken Bessler <kg0wx@NOSPAMyahoo.com>
Message-ID: <V54cg.27190$4H.9791@dukeread03>
Source record: 75344

I'm trying to ID this signal on 296khz. I don't think it's
an NDB. I've been hunting NDB's for years and this
signal is unlike any I've heard. There is a 4 second long
tone followed by the letters EUEINE then back to the
tone. The CW speed is also much, much faster than any
NDB I've ever heard. The signal is always on, even
when conditions are poor so I'm pretty sure it's local
to me (Wichita, KS).

Anybody care to guess what it is?

Interesting. In a town in called San Buenaventura complaining about
Hispanics.

FYI, New Orleans has Hispanics in a wide variety of flavors.

"Hispanic" is not an ethnicity... it is a collection of races (Black, Asian,
Indigenous, White) and ethnicities and nationalities loosely bound by the
heritage of or usage of the Spanish language and related culture(s).

In fact, Hispanics have replaced Blacks to a significant extent in NO. There is a belief that the city (not the metro), which was 2/3 Black, will end up less than half Black and more than 30% Hispanic.

Actually, only about 15% are likely to be illegal there. The rest are
totally legal. And whether you like them or not, they are not "spics."

I hear ya. Its almost like you have to keep both...its that hard of a decision. One thing some people don't know unless they have the SE-3 and used it; the R7A's passband tuning works with the Sherwood SE-3 Synch Detector. It does not work with the 515. This is all due to the design limitations of the 515.

How many of that 30% do you think will be illegals?

By the way, I'm not picking on them because they're Hispanic, or Mexican. I'm picking on those who have entered this country illegally.

You do comprende the word illegal, do you not?

Well Telamon,

You are one of the mother-fuckers giving me shit, for trolling this
site posting
the truth about your Goddamn cheap, over-priced, over-hyped SW radios,
that every
time a new radio comes out with a new worthless feature, you have to
run out
and buy one (plus, don't you need a, "new-in-the-box", as a backup ?);
all the SW
radios are basically the same, asshole. So, you are a racist, too -
should have
figured that much, fucker !

6166. Will This _____ Work As A Shortwave Listening (SWL) Antenna ?

Newsgroup: rec.radio.shortwave
Date: 2006-05-21 23:33:37 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148254417.111017.14990@j55g2000cwa.googlegroups.com>
Source record: 75424

Telamon,

An old Metal Coat Hanger (MCH) attached to a Receiver or
Radio's Whip Antenna will function as an Antenna of sorts.
* Maybe not a great performing Antenna but an Antenna
never the less.
* Not a very Scientific Antenna -but- a Workable Antenna It Is !
* Why use a MCH as an Antenna - When There Are Slinkys :o)

Note - Future Topic To Post :
The MCH Antenna -vice- the Slinky Antenna "Shoot-Out"
between Shaped-Bent-Wire and The-Moving-Coils . . .

My Posting here are simply 'practical' Answers to...
an every day Question : Will This _____
Work As A Shortwave Listening (SWL) Antenna ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9648

QUESTIONS - Concerning the Evolution of a Slinky as an
Antenna for Shortwave Listening (SWL) :

Q 1 - Can I connect a Slinky {Coiled Piece of Wire} to
the back of a Shortwave Receiver or to the Whip Antenna
of a 'portable' AM / FM Shortwave Radio; and will it work
as a Shortwave Listening (SWL) Antenna ?
-A- YES - The Slinky will work as a it will but not as
good as someting like a :
* Alpha Delta DX-Ultra Shortwave Antenna
http://www.universal-radio.com/catalog/sw_ant/3377.html
* Antenna Supermarket Eavesdropper Sloper
Shortwave Antenna
http://www.universal-radio.com/catalog/sw_ant/0013.html
* Par Electronics End-Fed Shortwave Listener
EF-SWL Antenna
http://www.universal-radio.com/catalog/sw_ant/2205.html
* RF Systems Electro-Magnetic Field (EMF)
'passive wire' Shortwave Listening (SWL) Antenna
http://www.universal-radio.com/catalog/sw_ant/0743.html
* RF Systems Mini-Windom Shortwave Listening Antenna
* Spi-Ro SWL-2 Shortwave Listeners Antenna
http://www.spiromfg.com/receiving.htm
* BUX Windom Shortwave Listeners Antenna
http://www.packetradio.com/windom.html
and many more "Ready-Made" Antennas for
Shortwave Listening (SWL).
-Or- You are saving up to buy a Miracle Whip Antenna

http://www.miracleantenna.com/MiracleWhip.html

Q 2 - Will the Slinky {Coiled Piece of Wire} work better 'if' I stretch-it-out 5-8 Feet and make it longer for Shortwave Listening (SWL) ?
-A- YES - The Slinky will work better as an Antenna for Shortwave Listening (SWL) when it is stretch-it-out and is longer.

Q 3 - Could I form the Slinky {Coiled Piece of Wire} around a Hula-Hoop and make the Slinky into a Loop Antenna for Shortwave Listening (SWL) ?
-A- YES - The Slinky could be used as a Loop Antenna for Shortwave Listening (SWL) with a simple Twisted-Pair of Wires or piece of 300 Ohm Twin-Lead as a feed-in-line to the Receiver's HI-Z Terminals.

Q 4 - Could I Rig a Pair-of-Slinkys {Two Coiled Pieces of Wire} into a Dipole Antenna and use them for Shortwave Listening (SWL) ?
-A- YES - A Pair-of-Slinkys could be used as a Dipole Antenna for Shortwave Listening (SWL) with a simple Twisted-Pair of Wires of piece or 300 Ohm Twin-Lead as a feed-in-line to the Receiver's HI-Z Terminals.

Q 5 - Could I Rig a single Slinky {Coiled Piece of Wire} for Shortwave Listening (SWL) into a :
* Mini-Vertical Antenna about 15-22 Feet long
* Mini-Horizontal Antenna about 15-22 Feet long
* Mini-Sloper Antenna about 15-22 Feet long
* Mini-Inverted "L" Antenna about 15-22 Feet long
* Mini {End-Fed} Inverted "V" Antenna about 15-22 Feet long
Using a Matching Transformer or Magnetic Long Wire Balun and Coax Cable feed-in-line ?
-A- YES - Slinkys can be used to make all of these five types of Antennas for Shortwave Listening (SWL) using a Matching Transformer or Magnetic Long Wire Balun and Coax Cable feed-in-line.

NOTE - When using a Slinky as a Shortwave Antenna out-side {out-doors} it is always a good idea to have a good earthen Grounding Point {Ground Rod} for the Antenna System and the Radio Equipment.

FWIW - The standard Full Size Slinky has about 100 Turns with a Diameter of 2 3/4 Inches and a Circumference of 8.64 Inches for a Total Wire Length of 72 Feet. This results in an Optimum "Stretched-Out" Length about 22.9 Feet based on Slinky's Coil Diameter and a Space between the Turns 'equal' to the Diameter.

Q 6 - Why could a Slinky be made into a one of those
Slinky Plastic Garbage Can (SPGC) Antennas ? and used
as a Shortwave Listening (SWL) Antenna ?
-A- Why Yes... Yes It Can ! :o)
http://groups.google.com/group/rec.radio.shortwave/msg/4d1fd6411001bb90

- = B U T = -
IMHO - None of these low cost and simple to make Do-It-Yourself
"Slinky Antennas" will perform as well as most of the
"Ready-Made" Antennas for Shortwave Listening (SWL) Listed
under Q 1 -IF- You have the Money to buy one and the Space
to put one up.
- For More - "Ready-Made" Antennas for Shortwave Listening
(SWL) see Shawn Axelrod's AMANDX presents "Pre-Built Antennas"
http://www.angelfire.com/mb/amandx/recant.html
WebPage with a list of Commercially produced Antennas
listed by Company.

A couple months ago, Art Bell talked about the solar maximum (of cycle 19) in the late 1950s when the sunspot count was very high. He said shortwave reception was incredible then, and he was easily receiving hams from around the world. Were any of you listening to shortwave or hams at that time? I want to know more about what it was like.

Saturday is the worst day to attend Dayton. With all hamfests, the best deals are either sold during dealer setup before the hamfest or during the first few minutes the hamfest opens. Some folks who don't intend to sell buy vendor passes to shop early. If you attend hamfests to buy and you can't be there when the doors open, you might as well stay home.

Well run hamfests do have good deals that rival or beat Ebay hands down. I usually come home from good hamfests with an item or two that made my trip worthwhile. Then there's hamfests held year after year in the same poor rut that makes you wonder why the sponsors even bother...

Once upon a time, one could talk with designers/engineers and find some
useful bargains. It was interesting and much anticipated in spite of the
pain every year to find a room. The attendees were of all ages.
A couple of years ago, my EE department thought to have a booth with an
eye to student recruitment. Head of the department has kin in Dayton and
attended when visiting. He concluded that a booth made no sense. Looking
at the pictures of this year's attendees makes it clear that he was right.
Dayton's time has come and gone. A shame.

< Snip >

This is not meant as a criticism of your antenna concept but the two
elements would tend to have the same voltage on both elements and not
generate much at the antenna output.

At least you are thinking about antenna possibilities. To bad we are so
far apart because verbal discussions about the subject can be fun when
you kick ideas around.

It would be big but I wonder if someone has attempted a short helix
antenna for short wave say about 3 turns worth; and how well it worked
for them.

I would certainly hope people can figure this out when this creep forges posts as you have done.

Until someone gets his hands on him if you see an out of character post from anyone check the headers.

I've written the owner of the open news server to put a stop to it but for all I know (at this time) I could actually be writing to the bad guy himself. If it is actually the bad guy that owns the server he can do anything with the headers. He can spoof the path and all other headers to make it indistinguishable from your post.

I have to give the guy that owns the sever a chance to solve the abuse problem. I'll find out what he is or is not willing to do about it. If it turns out he is the creep forging posts or is not willing to stop the abuse then it will be time to go up the chain.

And there you have it.

This long winded exercise of reading about "Lisa" finding a radio on
Ebay, gushing about it having bandspread tuning, then whining about it
having bandspread tuning, then wanting to sell it because "she" has
enough digital radios, then deciding to keep it because she wants to
make it like all the other digital radios is beyond silly and wearing
thin.

Actually Ebay didn't kill the Dayton Hamfest. In the 1980's it was
being handled as though it was still the 1950's and full of stuff that
had been carted between too many hamfests. Dayton is dying because the
promoters made the conscious decision to do nothing.

really it just seems like the guy (a bit different that is seems to be
a gal inthis case) that always has to the latest wizzbag radio (and
that can be be nice to be around if they also have the budget to keep
buying them) and then fools with awhile then more or discards them
(glaning around the shack at a few radios that were the very latest in
wizzband)

in that lisa hardly seem anything but slightly novel

Proving how wrong you can be. Of 27,000,000 persons from Mexico or Mexican heritage here, less than 7 million (yeah, still big) are illegal. The rest are legal, and many (half the legals) are born US citizens.

No, it is not. By the OMB definition, it is a culture that covers multiple races, nationalities and ethnicities. How are Oaxacan Zapotec Indians of the same ethnic group as Argentine Jews or Cubans of Japanese heritage or Blacks form the Dominican Republic and Guaran&#65533; Indians from Paraguay? Huh?

This is one of the beautiful things about the R7(a) and SE-3 combo that
has to be experienced to be appreciated. That alone should make your
decision for you.
Keep the Drake.
Never heard a 515, but the audio on the R7 sure isn't anything special.
Probably the only flaw in the whole rig.
Just out of curiosity, what filter bandwidths do you have in the Drake?

I remember it when people came from all over the world to the dayton
hamfest to see the new product releases. A lot of manufacturers unveiled
their latest radios and accessories there, every year. I also met the
founders of a lot of small manufacturing companies at the mini trade
show that was inside Hara Sports Arena. There was an sheik from Saudi
Arabia who flew in every year in a private jet. He was followed around
by his staff as he talked to different manufacturers and bought
multiples of anything that caught his eye, while the staff paid in cash
for the orders and arranged for anything that was in stock to be trucked
to the Dayton International Airport.

I've heard signals like that before down there. Figured I was somehow hearing "inverted CW" -- I was hearing a tone when the key was up and not when the key was down.

You tell me. I Plonk Trolls not argue with them. Flame wars are a waste
of time.

Whoever it is had forged the headers of other people so it is just
someone looking for trouble. All that was needed was to be in the wrong
place and time.

I mostly post in rec.radio.shorwave and other news groups specific to my
ISP that are not propagated outside SBC. I rarely post in a few other
computer news groups.

If RHF were to use the SBC news server instead of Google then he could
see my posts in sbcglobal.help.tech.newsgroups but you for example do
not have that option. There is nothing going on in these internal news
groups like there is in re.radio.shortwave

The guy forging posts picked me from this news group where I posted to a
thread about him doing the same to Les Locklear. That is when he made me
his next target with this post from me.
<telamon_spamshield-BF2865.10142719052006@newsclstr02.news.prodigy.com>

No flaming, no argument over something. I was just next target of a sociopath.

Now you tell who this is and why I deserve having my posts forged.

[...]

It doesn't matter if it's "group owners" under the NAB -- or outside the NAB: The real reason for IBOC is preservation of the (now utterly obsolete and unnecessary) dominance of the stations the money-men have paid for. And the only way to do that was to _prevent_ the dawn of a new, all-digital band where an even (and much larger) playing field would likely emerge.

IBOC is an inferior, interference-prone system designed primarily to ensure the dominance of the corporate broadcast media and limit or prevent the rise of new, independent voices on the radio dial.

IBOC (In-Band On-Channel) digital -- AM or FM -- is essentially a turkey, technically. It's inferior in almost every way to a dedicated digital system in a dedicated digital band.

The main reason IBOC is promoted is because a new dedicated digital band would level the playing field: the present 250-Watt AM daytimer, once ensconced in the new band, would have just as clear and clean a signal as the 50-Kw clear channel or the high-power FM -- just as good fidelity, the same coverage, and 24-hour operation. Just as your Web site is equally clear and as accessible as NBC's.

A dedicated digital band might also be scalable and allow many more channels for the listener -- hundreds, thousands perhaps. Probably enough to allow public access (in which anyone can be a broadcaster for free or nearly free) on an even greater scale than does cable television.

And that would mean more competition for the big-money men.

And it would mean that competition would now be purely on the basis of programming, not the sheer signal superiority which the money-men have paid for.

They want to preserve the _inferiority_ of their smaller competitors. IBOC does that.

They want to maintain the high economic hurdle to becoming a broadcaster. IBOC does that.

With all good wishes,

as one of the other targets I will venture a guess/possible
explanation, it icould be merely that you dared to seem to agree with
ME on something or with les based on the ways I have seen some folks
bandy his name around and that for not flaming me or les you were
deemeded worthy of flame

what is my crime? inthiere eyes I don't bother to hide some aspects of
my life they think I must ashamed of, that I must be humiated if it got
out

if this the case of why you were targeted you have My apologigies and
my sympathy

6219. (OT) : Not All Mexicans are Illegal . . .

Newsgroup: rec.radio.shortwave
Date: 2006-05-22 02:46:32 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148265992.314136.269550@u72g2000cwu.googlegroups.com>
Source record: 75476

Cuhulin, my friend not all Mexicans are Illegal surely the
ones still in Mexico are Very Legal :o)

Mexican-Americans who were born here are in-fact
American Citizens [.] They may wish to call themselves
Mexican-Americans just like : Italian-Americans, Irish-Americans,
German-Americans and even African-Americans as long as
putting the 'Mother Country' first is a statement of where
I can from and putting "American" last is a statement of
What I Am Today an "American" [.]

Here in lays the current problem in the Mexican-American community
- Those Mexican-Americans who view themselves as Mexicans who
happen to be in the USA {America} and care-not to be Americans.
These so-called Mexican-Americans are suffering from an "iL-Legal"
State of Mind and Being Mexican while not being in Mexico. These
Mexican-Americans are confused by an Immigrant Status and Political
Condition cheated by misguided Leadership that has as it's foundation
Anti-American Hatred. Their Praise of La Raza and Hatred of the
Gringo {Europeans} would be labeled as Racism and Bigotry if the
propagators were 'White Europeans'.

What is Aztlan ?

I know what I was told when I called to ask why the automatic
registration didn't go through, when the web page told me I didn't
know my own phone number. The woman read off my name, address, all
the other info, and asked if the phone number was mine. I said it
was, but I never use it for voice.

She said then that because it wasn't my primary number, I couldn't
participate. She *could* have been just saying what she was trained

to say, regardless of the reason, but given how the whole conversation
went I tend to take her statement at face value.

I certainly trust what she said over your mindless spin.

Well, then, tell them all a humorous story when you start out, about
the usenet idiot who thinks that a letter asking him to participate in
a survey, supplying him with a unique ID to get onto the web site, is
a recruitment letter -- I'm sure they'll all share a laugh with you.

DxAce has you pegged. You are a charlatan, Mr. Gleason.

I have both the 515 and the R7 (non A model). Although the 515 is built slightly better, and it does use that nice 8-pole roofing filter at the 1st I.F. I do like the R7 a little bit better.
I did do some upgrading on the R7, replacing the 1st mixer with a Mini-Circuits SRA-3MH and replacing the 2nd mixer diodes and the translator mixer diodes with matched quad sets of 1N5711 hot carrier diodes. Conversion loss from the 1st mixer is now 4.75dB vs the 6.5dB conversion loss of the original mixer. My 515 also doesn't seem to follow the original schematic of the typical 515.....instead of using a pair of U310 JFETs in the 1st mixer, a Siliconix E431 (+30dBm IP3 device) is used. This is a packaged dual JFET device.
The interesting thing is that the main board is silk screened for the E431, down to the keying notch that is on the underside of the device. Mine is an early 515, so maybe later iterations switched to the JFET pair. Either Siliconix discontinued this device or it just got too expensive. I picked up a few dozen of these devices surplus, not knowing what they were until several years later.
I would probably keep both of them.....they each have their own "cool factor".

Is that about the same percentage of Mexicans living there before Texas,
New Mexico and California were taken away from them? It sounds like a
peaceful reclamation of what they lost.

Why not learn to speak Spanish or at least merely exchange them for
citizens you already have but refuse to work for their incomes?

> It was $25/person this year, parking $8/day.

Well, that pretty well kills off the casual attendees that are essential
to bring fresh blood into the event.

And although the $25 might not put off the hardcore hamfester it does
put off a lot of the 'regular' people that are the foundation of the
event. Add $3 gallon for gas for a guy from Indiana who has a few
radios to sell and doesn't care if he makes a buck or not on the radio
but now he's out of pocket some actual cash money. Much more than
taking the family to a movie and buying popcorn!
C'est la vie.
I think a lot of these hamfest promoters figger on pricing themselves as
some sort of 'event' rather than just a big swap meet. It doesn't seem
to work that way anymore.

It's midnight at Barksdale Air Force Base. Ten fully-loaded B-52 heavy bombers rumble down the runway and ascend into the humid Louisiana sky. Their deafening roar shatters the peaceful night. Soon they will be high over their targets on the Mexican side of the border where they will unload their generous gift of 750-pound iron bombs on the unsuspecting Mexican cucaracha trying to sneak across the border under the cover of dakness.

168 illegal Mexican immigrants carefully and stealthily advance towards the border 86 miles southeast of El Paso. It is pitch black, and the desert is peacefully silent except for the crickets. Only 1 kilometer to go and they will be in the USA. Their spirits couldn't be higher. Suddenly, the night turns into hell on earth. BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM BOOM ..... The ground shakes uncontrollably. The sky turns bright red and yellow as explosions surround them. The mighty B-52s, flying too high to be seen or heard, rain their steel death down on the invading scum. The illegals run around in panic and confusion, shitting their pants and not knowing where to go or what to do. Their fear is short-lived. BOOM BOOM BOOM BOOM BOOM. Direct hit. Nothing much remains of them. Mission accomplished.

Tonight is the 5th night of Operation Alamo, the wide-scale carpet bombing of the Mexican side of the border ordered by the new American president who came out of virtually nowhere in 2008 to win a landslide election over his Republican and Democrat opponents. White America's bloodless revolution against the do-nothing, minority-coddling, illegal immigrant-coddling Republican and Democrat parties took the whole world by surprise. Finally, after 50 years, White Americans again have a government that actually represents them and is eager to do the will of the people.

While exact target planning methods are classified, we do know that the targets and bombing schedules are selected to achieve maximum surprise and results. Illegal immigration has already slowed down significantly, and some areas of extreme northern Mexico are nothing but craters. When Mexico protested, the president told them the bombing will continue until Mexico stops invading the USA.

Meanwhile, all illegal immigrants are being rounded up and deported, at gunpoint if necessary. U.S. citizens have also been empowered to make citizen's arrest of illegal aliens. The president's approval rating is 93%. The future looks rosy.

for someone who is always "cleansing" radios it is quite suspicious that he can't even dust this one.
the obvious conclusion is that he knows there is a serious issue and is trying to screw another customer.

If I only had a lead on getting him busted by the IRS or deported by immigration I would pounce on it . The world would be much better off without scum like him.

Source record: 75354

As have many of us, I have settled on the R7(A) and 515 as two of my keepers. The 515 is extraordinarily sensitive and I believe even more than the R7A. But the R7 has so many tuning options, including the amazing Passband, notch and selectivity options, that it makes DXing a breeze. I have never minded the ergonomics of the R7 that much. The addition of a RV75, which has become one of the rarest items on Ebay, improves thing a lot with the R7.

Would be interest in finding out from other 515 owners if anyone has located the master oscillator adjustment pot (if there is one) as I would like to bring my 515 smack on frequency.

I rmember being in the last years of elementary school and having a
Hallicrafters S-38E receiver. I thought I was in the "big leagues"
with this radio. I vividly remember that I heard hams using AM on 15M
and 10M during this time and there was foreign broadcast stations
appearing around 26 MHz and definitely on 16M. It was very facinating
for me at this time. Later during high school I had an NC-125 then an
NC-190. The latter was a great SWLing receiver because of the dual
calibrations on the bandspread (ham and SW bands).

Source record: 75361

If you don't want to contribute to a radio scam, then do what I did, here's the story:

Martyn Allison buys radios on ebay under the ID of gottahaveit1995. he then immediately resells it as radio-mart, that in itself is NOT a big deal. THIS IS WHAT THE BIG DEAL IS......everything he says when he sells it, is a LIE.
I sold him some radios last year when I didn't block his account from bidding on my stuff. he immediately relisted them saying that the person he bought them from had taken great care of them and had to sell them due to medical bills.....I NEVER TOLD HIM ANY OF THIS. this is highly UNETHICAL. Like a used car salesman not disclosing the true past of a car! I have seen him do this DOZENS OF TIMES and of course, that is just the tip of the iceberg.

at this point GOTTAHAVEIT1995 IS ON MY BLOCKED BIDDER LIST and if you don't want to be part of this disgusting life he leads, then I suggest you also place his account on your blocked bidder list. if you don't want to see someone buy your product under false pretenses, do it !

think about it.....are you for GOOD,,,,,or EVIL

I certainly will accept that not everyone outside research circles knows
terms of the trade. "Contact" is not "recruit." A contact is an initial
exchange with a potential recruit. A potential does not become a recruit
until both sides accept, at which point the person "is recruited" and "in
sample."
>
> http://dictionary.reference.com/search?q=recruitment
>
> 4. To enroll or seek to enroll

Absolutely. You are not enrolled untill you have gone through the
questioonnaire, including phone verification, demographic verification and
media houshold question.
>>
>> You do not know that, since the phone caused you to NOT be recruited
>> immediately. You might not have been in the desired quotas, for example,

Unless you had completed th eon line form, and the filters on it had all
come up with a "yes" you were NOT recruited.
>

The reason, per Arbitron, is to keep people from giving the letters to other
people who would call or log in and purport to be the participant, despte
being in the wrong geographic area or having some other exclusion.

It's a "contact letter" to warm up POTENTIAL recruits for the recruiting
process.

Sorry, but no.

Clinton's congress balanced the federal budget, they did not, nor will any congress in the foreseeable future, pay off the national debt.

It is true that the sitting congress and president have run the national debt up many billions (trillions?) more than it was, AND trashed the federal budget, but there was already plenty of the national debt to go around when they got here.

The number of new products released tells it all. Whats new, absolutely nothing.

The worst part is the price of all this old junk, some people think buying old junk should cost more than gold nuggets or close to new prices. Collins mania must have spread into old junk parts. Amps parts especially!

The biggest joke was RF parts like vacuum variables, "what you want $200 a piece with no warranty! Same comments apply to tubes. You might as well buy new or from one of the reputable dealers who will give your money back if its a dud.

6269. Any mods on these receivers ?

The typical 'F2' (not sporadic-E) propagation went beyond HF during the maximum of cycle-19. It was often at 40-Mhz or more. It went higher than 50-Mhz on some days. DX'ers on the east coast of the US were receiving the low VHF television channels from Europe, particularly England. This might have happened again during cycle-22 in 1989 but by then the British weren't using the low VHF spectrum for TV.
The maximum of cycle-19 also coincided with the 'International Geophysical Year' or IGY. It was a year of scientific cooperation among nations to advance our collective knowledge of the earth sciences. This included expeditions to the poles, explorations of the deep oceans, and rocket experiments to near space. I still have a commemorative postage stamp issued by the USPS for the 'IGY'.

Can anyone help me with research for my degree.

I'm looking for information on ham radio enthusiasts who suffer from manic depression (bipolar syndrome). I'm researching the effects of RF fields on electrical activity in the brain. This particular form of mental illness may be specifically at risk.

Can you put me in contact with anyone who could help me?

Thanks

Gerry

Frank and John lambast George Bush for tapdancing around the question "what is to be done with the illegal invaders that have crossed our border?" Frank explains Bush has signed the death warrant for our country, culture and economy, and explores why Bush signed this death warrant.

Frank and John explain how this issue is not about Republican or Democrat, Left or Right... it is about the American people.

Plus, good advice for the Boervolk... a loss of faith in our institutions?... Frank and John conquer South America... A terror regime of political correctness ruling our nation... reflections on talk radio... your phone calls at 718-761-9996 and much more.

>> Am I correct this Hamfest costs a lot of money to attend as well?

That was at the door. If you pre-purchased, it was $20. Is that a lot of money for what is still the largest hamfest on the planet? I was there this year, and the place got picked over quickly. I'm sure there was little left by Saturday. I brought 3 radios to put on my brother's table, and they were all sold within 2 hours for more than I would ever have gotten at any of our local radio meets. So,for me anyway, while it may not be what it was compared to previous years (what radio meet is?) I still find Dayton a lot of fun, and well worth attending. Blame eBay if you like, but the fact is that there is very little new blood coming into the hobby, and the old blood, is-well-getting older.

Sure!!

HamComm charges $10 admission, like Dayton charges $25
a head to get in. Their pricing themselves clear out of the
market! Then add in the price of gas and food and is it any
wonder why hams are staying home and ordering their
radios onlive via e-Bay or elsewhere ??

It's actually cheaper to go see a Major League Baseball
game live admission than it is to go to a stupid Hamfest.

Do the $$$ homework boys - you guys that run these ham events
are screwin yerselves faster than Barbaro broke his leg last week.

After having spent a couple mos attending local AR sponsored swap
meets, I figure the "doors open" buyers are there to score deals they
can turn around and put on ebay.

And the "they" is not always the involved ARC. A local club here got
kicked to the curb by the local community college and now have to
stage their long running monthly swap meet at the rodeo grounds in a
dirt parking lot. That killed off most of the computer vendors and
literally cut the size in half.

6317. Ebay & "The Market"

Newsgroup: rec.radio.shortwave
Date: 2006-05-22 15:34:07 UTC
From: Peter Wieck <pfjw@aol.com>
Message-ID: <1148312047.828984.28290@38g2000cwa.googlegroups.com>
Source record: 75524
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave

After reading all this, and with the recent Kutztown event in the background, as well as my three weekend finds, I am not so sure eBay has much to do with anything as to radio prices or availability. This is based on several assumptions which I will list for correction/addition/amplification:

a) the west, southwest and south in general suffer from a dearth of good radios. This has been the case for the over 20 years I have been in the hobby and remains the case today. Exceptions include Florida & Maryland... stretch to make MD a 'southern' state although it is below the Mason/Dixon line.
b) the Pacific northwest suffers from the same lack to a lesser degree.

With this in mind, eBay has always been a presence in areas where the natural crop is limited or non-existent. This group will typically have a view of radios that is wildly distorted in price, as they start with the "everything costs $15" mentality based on shipping alone.

As one moves east especially into (former) wealthier parts of it, and around older major cities (Chicago, Minneapolis, Detroit and so forth), radios become thicker and thicker until one hits the East Coast, where even the most limited multi-family garage sale will offer a few examples of *something* loosely described as being related to the hobby. Then, at Kutztown, the typical $30+shipping eBay brown bakelite radio goes in the $15-if-that range at the end-of-meet auction. And the $229-for-a-common-RCA (albeit polished to glow-in-the-dark proportions) simply does not happen.

So, it is "all according to" location and opportunity. Kutztown is a free-to-the-public event held at a major Farmers' Market/Antique Market that also has weekly tables for anyone selling. Accordingly its attendance is disproportionately large and consists of a disproportionate amount of the "general public" walking through out of curiosity and because they were 'there anyway'. This would not happen at a destination-event if only because of the lack of general publicity as much as the uninterested public would never go nor have any reason to even be proximate that they might go. And, of course, the admission fee would deter those few that did happen to be straggling nearby.

I will also state for the record that Kutztown had _at least_ thousands of radios in all states, of all types and in all price ranges, from high-end, high-tube-count consoles through lovingly restored tabletops through standard junk. The peripheral events are limited... no hotel-banquet-hall lectures, but those few were directly on-point and even of interest to non-radio people (The talk on Crystal sets, for

example).

So, from purely anecdotal evidence, it appears that those venues where the general public is not actively solicited, those venues that are 'preaching to the converted' are shrinking. Those that do solicit the general public, those that run at (apparently) a much lower key appear to be growing. The two local examples would be the DVHRC-sponsored events (Kutztown, PA) and the NJARC-sponsored events (Hazelet, NJ). Those of you that go to the NEARC events in Nashua, New Hampshire... how are they doing? I hear from some acquaintances that they are doing quite well? And I also hear that Rochester is a mere shadow of its former self? Is this true?

In any case, I remain of the general belief that eBay is not a significant factor in the hobby to those in the east. And to those in the west or out-of-range of large, older population centers, it has _always_ been a factor, neither more nor less much than now.

The thoughts of others are actively solicited!

I'd rather spend the money on batteries. The power can be out for
weeks. I already have flashlights and radios in my emergency kit, along
with a month's worth of batteries for all of them. I use batteries out
of the kit and replace them with new ones as they are needed for other
uses. I am deciding what small tools to add to the kit for this season,
in case I end up at a hurricane shelter again and find that there are no
tools, and a lot of things that don't work right.

Well, the best as its ever been in my lifetime. Just got my General
class ham ticket around '59 or '60, so I was able to use my dad's ham
station-a Heath Apache and Mohawk with a 60 foot tower and a tri-band beam.

Working DX was almost too easy... the bands were spectacular, open
almost 24 hours a day, even 10 meters. Just for an experiment, I
remember turning down the transmit power to around ten watts on 20
meters, and working KC6PE (Ponape Island) on the first call...

So from the World Harvest Radio website, I gather that WSHB has changed call letters to WHRI.

There's also WHRA in Greenbush, Maine. I wonder if that's the old WCSN, and they just changed call letters AND city of licence.

Wonder what happened to the original WHRI in Nobelsville, Indiana?

I think that most of the times I tuned in Monitor Radio as a kid, it was WSHB. I was even able to listen to it inside a hospital, while visiting my grandmother who was in for some surgery.

According to the snowbirds from the New England area, Florida is the
southern tip of new England. :(

So, you're saying that the price hasn't changed that much since I left
Ohio in the late '80s? Do you think that they get Hara Arena for free,
or all the cops and bus service for park and ride?

Mine is maybe 10 hz off, but my main problem is my PBT is off quite a
bit, in USB, I have to set it to about 2'oclock (I have the knobpot mod,
the stock fine tune detent drove me up the wall), or the audio is bad,
or there's a het. On LSB, it's even worse. I was thinking about just
trying to set it by ear, and see how close I can get.

I should just go and buy a decent freq counter and do it the right way..

BDK

good points.

The local flea markets here, always seem so barren of good stuff. So I managed to get to one 35 minutes before official opening time.

I was surpised to see the smart buyers already walking out with boxes full of all the good stuff !

The best items sell, as the spots are still being set up.

Source record: 75542

Dear Mike,

I agree with you - this person's tactics are something less than honest or even fair. However, let me play "devil's advocate" for just a moment.

Suppose he were to outbid everyone else and offer a seller a much higher price than anyone else would. Wouldn't it be in the seller's own interest to let this man buy the radio (assuming he pays properly)?

Then, what "RadioMart" does with the radio is of no consequence to the original seller. After all, haven't we all traded in a car, perhaps not revealing "all" about it (so that the dealer would give us a higher price)? Then what the used-car dealer does with that car is of no consequence to us. (And we all know about "used-car" dealers!)

Basically, what I am saying is of most importance to the persons who BUY from "Radio-Mart:" Caveat emptor. (This applies to ANYONE buying a "used" product from anyone and even applies to people buying NEW products. After all, I have NEVER seen any dealer or company stating that "while my product is good, there are others out there cheaper and better." ALL dealers embellesh the truth (to put it bluntly, they lie) about what they are selling.

"Radio-Mart" has earned a rather dubious reputation on this group as well as other ones. Let the buyer beware.

Best,

Joe

Regardless, Dayton was packed with attendees. You could barely move at times
in the indoor exhibits on Friday.
Parking lots were full, there wasn't a hotel vacancy anywhere, etc.

> It's actually cheaper to go see a Major League Baseball
> game live admission than it is to go to a stupid Hamfest.

Not for a Chicago Cubs or White Sox ticket. No way.

What would you have them do? Operate the meet at a loss?

As a rank newbie (not even licensed, yet) I more or less have to agree. Here in the San Francisco Bay Area (SFBA) where there are at least a couple local ARC swap meets per month, I see none of the stuff found on ebay in the way of classic old ham equipment. Hell, I can't even find a used morse code key to practice on. I'm gonna hafta buy a new Ameco from HRO. Not quite sure exactly why this is. Perhaps most of SFBA ppl are all digitally oriented due to Silicon Valley being the original hot-bed of digital. Whatever the reason, old Collins, Drake, Heathkit, etc, rigs are rarer than cheap gas and low real estate prices.

On the positive side of the ledger, due to the glory days of the late great SV, there's hardly a man or woman alive in Northern California that can't fly a Fluke or wield a mean Weller. I'll be flogging my own acid-free flux and have already bought my first QRP kit with my eye on another.

I was curious about the way it was run so I talked to the group that
organized the event every year. You wouldn't believe the crap they have
to wade through to run a hamfest that size, even though the money raised
is used to provide emergency communications for the area.

Yes. When we use terms like ''harsh reality'' describe someone's
relationship to a toy radio how then can we describe stuff that is
truly severe and real like impending global climate catastrophe?

He may be a lot of things, and his history here will show some sharp
exchanges when provoked, but is content is among the most 'on topic'
here, and he rarely ventures from the gentlemanly exchange.

He's hardly an arsehole.

> and of course the new ones at normal to slightly high prices.
> Disappointing.

Last year when I went on a Friday, I found numerous
Icoms, Kenwoods and the occasional Drake for sale.
My suspicion is that Friday is the day to go, because
the prices weren't too bad for, say, an R71A compared
to what you get on eBay for it (shipping included).

Of course, the best part is that you get to try the darn
thing out first before you buy it, so you'll know if you're
getting a lemon. That's probably why our favorite eBayer
isn't usally at Dayton to sell things, even though it's
not a far drive for him. I went through about 4-5
Hallicrafters SX-100's before I found one that I liked
enough to buy.

For my money, the most overpriced item was a
Hammarlund HQ-180A that was covered in rust
and crud and someone was asking $500 for it.

I have to agree. I got to Dayton last year shortly after
the opening, and there were already some R5000's
and some beautiful old Hallicrafters that already had
"sold" tags on them.

Oh Yeah - try being a vendor at hamfests
Add em up
Travel $30 to $300
Booth cost Typical $250 - Some fests charge extra for power
Hotel costs $120 to $350
Food $45

The small item vendor has to sell a ton of stuff just to break even

At one ham fest I guy offered me 1/3 price for a book
I relied "Which Chapter do you want?"

I've gone 5 of the past 6 years.
4 years ago there was a tent full of old AS/400 CPUs.
Less of that this year. Still, a lot of junk every year.
People wanting high-dollar for very-worn equipment.
That was disappointing.

What gets me is the guys selling bootleg MS software for big bucks.
Illegal as all get-out.
But tolerated, apparently, by HamVention.
They could get in big trouble.
That would be sad.

But it's not the only way that the WWW has changed Dayton.
It's changed the whole of communication.
Repeater/IP connections may be nifty, but they're not radio.

Maybe it has something to do with the number of people hit by a car
or truck, and the number of other accidents they cause when they step
out in front of a moving vehicle. I've seen quite a few wrecks going
to, and leaving large hamfests that could have been avoided by keeping
foot traffic away from the vehicular traffic.

Internet based sales have a huge advantage over in-place sales like
Dayton. Ebay and other sales sites can as we all know bring sellers
from around the world at any time of the day. It just isn't possible
to get that kind of coverage at an arena in Ohio.

To the extent that buyer and seller are honest (and most are) internet
sales work very well because money and the good to be sold have to be
moved only once.

It is for the exact same reason that in-person antique shows are having
a hard go of it.

6384. Re: Dayton HamFest killed by hams themselve

THAT is the single largest obstacle to these events. It is not simply a matter of finding a vacant bit of ground and throwing up a few signs. In this lawsuit-happy society, there is Insurance (liability, property, fire, and so forth), staffing, cleaning, trash-removal, contacting food vendors (and verifying their insurance) and much, much more. Is whatever equipment you are providing also insured? What about any electrical devices? Fences? Guide ropes? ADA compliant? Sufficient facilities? Will food be served? Are they insured? Licensed in *that* township? Board-of-Health certificates? What about the servers? Any contraband/knock-offs/unlicensed material being sold? Sales tax collected?

And so forth. Not small. My wife's church (a very small one) carries a $1,000,000 policy on any internal events held by non-church groups _AND_ they insist that these groups also carry a *specific* policy for the event.

So it is not just collecting table-fees and admission-fees.

I still think that closed-ended events for dedicated hobbyists are bad ideas anyway, but I am not unsympathetic to the complications involved.

Peter Wieck
Wyncote, PA

But in some ways, Dayton may be an exception, or at least one of a handful
of exceptions.

Dayton is big because it draws people, not just from the local area but
from far away. Costs go up as size goes up. I'm willing to accept
that some hamfests are "insider" events.

But you're right that hamfests should be used as a recruitment tool,
and certainly the smaller they get the more their survival requires
a wider swatch of the population.

The local hamfests here in Montreal do not publicize outside of
ham circles. At least, I don't see it and if I didn't know
about the ham clubs and the hamfests I'd not know that they were
happening. For most of a decade, I've at least posted to the local

buy and sell newsgroup when one of the hamfests is about to happen, and less regularly I post about the others. I'm not sellng the hamfest, but trying to get the word out.

I give the details, but also a spiel because I'm aware that people who don't know need to be informed. I make the point that visiting is a way of finding out about amateur radio, and that the hamfest can be a valuable resource for non-ham. Shortwave listeners may find things of interest, the electronic hobbyist will find things, and of course in recent years computer types may find things.

And while few will see the message, relative speaking, it may be the only time most of the readers see a mention of amateur radio in that year. The way I see it, it's not just about selling tickets to the hamfest, but it's an excuse to get amateur radio out into the world.

When I was a kid, I found out about the hobby because there was an article in a general purpose magazine. I found out that the rules were about to change to allow people under fifteen to get licenses in the local paper. But that sort of thing happens less and less. At the very least, some promotion of the hamfest is a means of letting new people see something about the hobby, and maybe pursuing it further.

And sustainability is a factor. The biggest of the local hamfests is fairly small. SOme years back, one had to cancel because they'd not sold enough tables ahead of time, the next year they came back in a much smaller space that doesn't allow for growth. Had they been promoting the fleamarket outside ham circles ahead of time, they could have attracted "fellow travellers", the SWLs and the electronic hobbyists and even the computer types, to fill the empty tables.

Dumb, dumb dumb dumb ... (Old "Dragnet" theme)

One huge factor driving illegal immigration is the sad state of the Mexican economy -- terrible problems with low wages and high unemployment rates created in part, at least, by NAFTA and by economic "globalization," courtesy of Bill Clinton and George W. Bush.

So if your imaginary US president did, in fact, bomb the Mexican side of the border, what would be one big side effect?

It would further wreck the Mexican economy, wouldn't it?

And that would leave millions of Mexicans with no good way to survive -- except by trying to cross the border into the United States. Despite all the obvious dangers.

And of course, if American employers continued to want to hire illegal immigrants -- for agricultural work, for hotel and restaurant jobs, and for low-paying factory jobs, where people are expected to put up with terrible working conditions and bad wages -- if US employers continued to want to make use of cheap illegal labor that can't fight back, and can't demand its rights for fear of being deported - the current heavy flow of immigrants would likely continue.

So bombing along the border is basically stupid. It just feeds the angry fantasies of people who are deeply upset about immigration and feel helpless to stop it any other way. It's the "Columbine" solution -- or non-solution -- to a problem that needs to be cured another way.

I'm not a conservative, but I sympathize a lot with US citizens living along the borders who want illegal immigration to stop.

But when are anti-immigrant forces in this country going to tackle the roots of the problem -- namely, greedy US employers who hire illegals, and greedy and arrogant US trade policies that help to keep Mexicans and other would-be immigrants from making a living at home?

I am a new Ham and have been to two ham fests this year put on by local clubs. Very disappointing. I thought maybe I could get some used equipment
since I had none. If I had been looking for 23 channel CBs or obsolete computer junk I would have been all set. I thought selling old 23 channel Cbs was illegal because of the power.There was a real dealer at the one so I got a new VX 150 from them.Got home and there was no paperwork in the box. Went back to get it at 11:45 AM. The thing was suppose to last till 1PM.
Everyone was already packing up all their junk.This dealer had no time to find my manual and stuff and said they would mail it.Took 2 weeks. Lucky for me I found a manuel on line. I'll still try different ham fests but if the granddaddy was a bust I don't know about the small clubs.

I thought it was kind of sick too. Why would anyone want to drop 750 lbs. bombs on the Mexicans when we have 5000 lbs. bombs that will take out a city block, and get the burrowing little bean eaters right in their tunnels?

E-bay and other on line auctions can never replace spotting a part or
piece of equipment you need that isn't worth the dealers time to list,
or would cost too much to ship. More than once I've asked about
something and was told to take it, so they didn't have to haul it home.
I've never seen an E-bay listing giving something away, and paying the
shipping to your door.

Talked to an old Tech once about 1958
(sunspots~200+) in the early
Sixties.He said that it was so good
it became boring...transcontinental
6 meter AM,plus even some Europeans
using special permission.
So they would go into the parlor and
watch transcontinental DX on TV channels
2,3,4....or just read a book.<g>

Shuuuu, don't tell everyone. That's half to reason to get a
flea market space. That way most of the time you get in
before the general public and scoop up the good deals....

You have a point there - not that I totally agree with the poster you
replied to. I've had some real bargains "handed" to me so they didn't have
to be hauled home.
Actually, each venue has its own place in life. Problem with Dayton and
other hamfests is between fuel costs and so on - there are more and more
factors involved keeping people away. Ham radio itself isn't what it used to
be. Then, some clubs who've had them - as I've heard it - had inner battles
as to how things are to be done and so on. So club politics played a part
along the line. I'm sure we could list many reasons for failures as they're
being seen. Question is, who has the "answers"? Times are changing. Things
change with time and I see it here in my own town - People DO NOT like
change. I'm sorry to see some things go too - but there's not much you can
do about some things.

It has nothing to do with liberalism or conservatism. It has to do with
American sovereignty. I'm glad you sympathize with the US citizens
living on the border, but 10% of the Mexican population is now in the
US. That's a conservative estimate.

Clearly Ebay and other internet sites won't completely replace in
person sales, be it a hamfest, garage sale or estate auction. But the
ease of bringing large numbers of buyers and sellers together via some
internet connection has had a significant impact on brick and mortar
operations. The ease of transacting a sale electronically be it for a
Kenwood 940 or a spinning wheel can't be ignored. And the sellers that
fail to react in some way will be left behind.

Maybe, the obsession with having to buy backup receivers,
"new-in-the-box", like that gentleman who bought one Eton E10 then,
"liked it some much I went back and bought another one" (what a waste
of $100), has something to do with it. He bought them "used" from RS,
but should have bought either the Sony 7600GR, or Degen 1103 (I would
have bought the Degen 1103, so I could have a, "new-in-the-box," as
backup, for the same price as the Sony, plus change)...

I have a friend who's a professional flea marketeer, he told me that
for an 8 AM opening time, he's already walking around at 6:30 AM buying
stuff- and by the time the public gets there, the stuff that's worth
$200, that was selling for $25-50, is gone- other marketeers already
bought it

then, they put it on ebay when they get home

what doesn't sell, goes back to the market 2 weeks later

constant cycle

the average joe can get lucky here and there, and find some stuff under
bushels, etc., or from someone that set up late, or someone that
finally moved off a high price

but for the most part, the VERY early bird, gets the worm

anything you see sitting at a flea market late in the day, was most likely already tried on ebay, and didn't reach reserve, or got no bids. sometimes you'll see stuff at flea markets that seems valuable, and underpriced, and no one is biting

that's cuz the marketeers already know, that particular item is hammered on ebay, too many listed, and the price is down- so they are cutting their losses and just dumping it

marketeers will tell you, they'd rather sell it cheaper at the show, than for slightly more on ebay- because of ebay and paypal fees, and packaging work involved- and nitpicking assholes like DeserTBob on EBay, who want gold for a penny and free shipping

I put the ball to a metal grinder and I could easily see an outer F layer and then the E layer. I couldn't find a D layer, but it was dark outside and there's not supposed to be a D layer at night. Neat how antenna's can be manufactured to do that.

Just passed my tech and General on Sunday so I'll be on the bands as soon as I find out my callsign and get an ionsphere for my antenna. I destroyed the old one on the grinder and I hear you need a good ionsphere to shoot good skip and hear far away stations. Reception has been really shitty lately without the ionsphere. I looked through the last 4 issues of QST and I couldn't find anyone selling ionsphere's. Where can I get one, or do I have to buy a whole new antenna?

Thanks, Jay

Thinking about this delimma, what happens, if Degen comes out with an updated version of the 1103 ? Do we throw away our current, but pristine radio, break out the backup, then purchase the updated radio, as backup ? How many do we purchase - one or two ? If the updated radios sit as backups, then we won't be able to use them, unless we drop our old Degen, or get a blemish on it, so we can throw it away. Do we then, break out the older version backup, or one of the updated radios ? But we always need to have, at least, one backup of the newer radio. This delimma goes on-and-on, as Degen comes out with updated radios (one seller on Ebay lists their 1103, as the most recent version). Then, I heard that Degen may be coming out with an 1105 - what the Hell do we do ? God, this is making me crazy !

You don't need a new one. The old one probably got stuck in your coax
by back-feed when you were grinding. Just get an RF brush and give your
coax a few swipes and the ionosphere should pop right back out!

I think Peter is pretty much right with his observations, Project sets are plentiful in the Northeast and upper mid west, and the West coast folks are really desperate! I very seldom buy on ebay, but do keep a watch on things. The only things I ever buy are large pickup only consoles that are close by. Most of the Restored stuff I sell ends up in the deep south or on the west coast, the Cost of living is so high in California that a Nice restoration at Retail WITH shipping across country is still a bargain out there.

Well, more info for you. The letter is EXPERIMENTAL to see if it increases the recruit rate, and only used in a couple of cities where folks are reticent to participate, like Denver and Portland. Second, it is not used except to increase the ability to contact people to recruit them. This per the diary manager at Arbitron in Colum bia.

The letter was used to measure response. None of the people who got the letter were used in the sample, as the letter is not accepted and approved by the MRC, the committee that does the accreditation of Arbitron. So, the statement stands: Arbitron only recruits by phone. If the test works, they will submit it for MRC approval. In any case, the actual recruitment only occurs after a person passes additional screens.

Next.

Ah, Ron....

RANT WARNING

You need to understand the essential difference between a "Flea Market" and a Hamfest or Radio Meet. Fleas are just that. Locations where mostly crap is redistributed amongst a few, and mostly Chinese Junque is sold at no-better-than- Cosco or Sam's Club prices, but somehow the appeal is the 'story' and perceived bargain vs. the actual reality. Those that do it "professionally" (NOT ALL, mind) are in many ways the cockroaches of society inhabiting the dark corners and hiding under filth to avoid paying taxes and to skim from society without paying any freight. I once was present when the State Police together with the FBI and quite a number of local police groups raided the Pennsauken (NJ) Drive-In flea-market. They focused _only_ on the 'professional' dealers, some 90% of which (a line of handcuffed mostly-men that stretched over 100 yards, shoulder-to-shoulder) were selling all/some of the above: Stolen goods (Wonder where that "Sears Craftsman" or Still-in-the-Clamshell Channel Lock or Klein or Mac or Snap-On comes from?), knock-off goods, illegal goods (baby clothes not fire-treated, recalled tools and/or appliances), mislabeled goods (made in USA... NOT), pirated goods and so forth. And the Feds were there for the Tax-Evasion stuff as well as the across-state-lines stuff. The 20% of the dealers that were in it for the weekend, cleaning out the attic and the like were entirely ignored. Very damned little of it any more has anything to do with "recycling" used goods. Yard sales and garage sales, church bazaars and such are about the last refuge for that kind of thing. But keep in mind that every time one buys something stolen or a return or a recall or a torn-cover paperback at a flea, one is quite directly taking someone's job away, usually right here in the good old USA. Who gets sued if a recalled defective Craftsman or Stanley or Klein or Channel Lock Tool sold at a fleamarket hurts someone? The "vendor" that stole it and resold it? Not hardly. And whose prices _all_ go up as a result? Ours. And is it Chinese manufacturers that go out of business due to overhead costs? Nope. But, very damned few of us think about this stuff when we see that tempting tool on the table. "We" figure we can buy it at the flea, then take it back to Sears if it breaks.... GOOD thinking.

On the other hand, there are "shows" dedicated to certain hobbies. My approach to a 'timed' show (opens X and closes Y) is to not sell _ANYTHING_ except as-marked before the show opens. I tell people that I will negotiate price one hour (1hr) after the show opens officially, but not until then. Period. And when someone askes me what is my

"dealer price" I add 20% automatically. But that is *just* me. Once upon a time, one dealer at Kutztown, very early on when it was a 1/2 day affair was all over me as I was unloading. And as this individual would easily have made three of me (no kidding, and I am 6'-3", at 220lbs) it was annoying to say the least. He was picking stuff up, pulling stuff out of boxes, turning stuff over (and leaving it) and such. All the while pattering on how ridiculous my prices were. At the time, I had sprained an ankle and was using a blackthorn stick just after sitting or driving until I loosened up. I actually had to raise it and call for witnesses before this particular jackass moved on. At the end of the day, I drove home with a full pocket and an empty vehicle. His load was still with him, literally and figuratively. I will not say that my raising a very loud stink to get him off my stuff had anything to do with that, but I would like to think so. I had a 'pot' to support the hobby for another year. It has pretty much been that way ever since. I cover my costs, and turn over my radios keeping fewer and fewer, but nicer and nicer radios, and fewer-but-very-much-nicer audio systems.

So, it is all in accordance with how one behaves, how one sees the world and how lady luck sees you. I have found as many bargains in the last 30 minutes of a flea market as getting there before set-up. Mostly I am buying for my own use and pleasure, resale is at best a tertiary concern even if that... This is a HOBBY for me, the moment I feel I am becoming predatory, buying for resale or otherwise treating it like a business, I take a deep breath and walk away. THAT IS ONLY ME. Others are free to behave as they see fit. But I want to be able to look any of my buyers in the eye years later and get a smile in return.

END RANT

URS,

The "Alpha Delta" - Delta 2 and Delta 4 Antenna Switches
are still listed at Universal Radio
http://www.universal-radio.com/catalog/switch/2415.html
http://www.universal-radio.com/catalog/switch/2415alt.gif
http://www.universal-radio.com/catalog/switch/0011.html

FWIW - I like the design lay-out and the solid build
quality {Feel} of the Alpha Delta Antenna Switches.
[Having all the Coax Connectors on one side]

Daiwa Antenna Switches are also listed at Universal Radio
http://www.universal-radio.com/catalog/switch/1864.html

List of Antenna Switches at Universal Radio
http://www.universal-radio.com/catalog/switch.html

Also check
* Amateur Electronics {Equipment} Supply (AES)
AES HAM => http://www.aesham.com/
* Ham Radio Outlet (HRO)
HRO => http://www.hamradio.com/

For the 'used' Antenna Switches : Why not check eBay
on a Weekly basis to see what might come along.
* Search eBay for [antenna + switch]
in Category : Radios : CB, Ham & Shortwave
ANTENNA SWITCH => http://tinyurl.com/nx4pz

For "Receive Only" Low-Power {No Power} Use
even a TV type Antenna Switch could work with
the right Adapters. Also some of the CB quality
Antenna Switches with SO-239 Jacks will do.

eHAM Reviews for Category : Antenna Switches
http://www.eham.net/reviews/products/2

2 - Yes - Antenna -to- MLB -to- Coax Cable
-to- MLB -to- Radio - Works !

hope this helps - iane ~ RHF

The letter had been used as an experiment in parallel tracking in hard to sample markets, as a part of a project mandated by the Arbitron Advisory Panel (a group of radio people who meet to advise Arbitron). They actually tested it in 10 markets in the Winter, 2006 survey in parallel with "real" recruits to measure differences. There are still concerns that it biases the actual recruit. If accredited, it will be used as a technique for non-ethnic audiences by the end of 2006. So far, none of the letter receivers have been part of the actual radio ratings sample.

Ottawa county is part of the Grand Rapids MSA, and is not currently receiving letters.

The 3030 could benefit with PIN diodes in the front end, but all-in-all it's a decent receiver with good selectivity filters.

The SW-2 has decent filters but I found the 6 kHz AM filter to be a bit wide. The encoder will eventually give you trouble.

The R-30C should be a decent receiver all around if they ever fixed the unstable IF and the huge amount of birdies it had.

I bought one at the Dayton Hamvention on Saturday that was supposed to be "new in the box". When I got it home and opened it up on Monday afternoon there had been battery leakage in the battery compartment. I did put batteries in it to see how it worked and it seems fine, but it is going back in the next couple of days and either they will give me a new one or I will get a refund. This is the kind of crap that seems to happen to me at when I buy things at Radio Shack...I should have known better. On the other hand, it seems like a pretty good buy at $50 and seems to work pretty well.

were we at the same Dayton?

It was my second one in five years.. $300 flight. $97 rooms at a Marriot
and $ 75 for an Avis rental.

Great time, lots of stuff to see and would have bought a lot more if I had
not flown in.

I think that the hamfests are down since the 80s and 90s but I also recall
those fests had a ton of used computer dealers, so the number may have been
artificially inflated as the way of build your own computer went away and
those guys left.

Sure there was some overpriced stuff and they did not move. But there were
some very reasonablely priced things that did.

I'll be back again in 3-5 years.

You cant touch or feel or converse as well with internet sales....nothing beats the face to face events, if they are well run. In the antique radio world, Extravaganza is one of the best, Bolingbrook is making a strong comeback from the Elgin days, Charlotte is strong and Kutztown is overflowing into the next pavilion.

All you have to do is have a good facility, be open to the general public for free or little money, and promote your show like crazy. An enforced set start time makes it more fair, as Extravaganza and Charlotte have proved. The other two should consider that...

I sold at Dayton in '96 and '97. It was sliding down then even in my opinion... I only sold about $1300 worth in two days... about half that could be considered profit. Not worth it for what was essentially 4.5 days worth of work (1 day loading, 2 days there, one day RT driving, half day unloading). I had all tube era stuff.. tube sockets, capacitors, trimmers, Ham type tubes, etc, etc. All the guys stolling by had "Rice Boxes" strapped to their belts and didnt know which end of a soldering iron to hold. One guy even held up an old RCA 811 tube to show his buddy and said "I remember when we used to use these things!" His buddy'd never seen a tube I think, and he was about 35, this being back in '96.
I had 100 pc bags of mylar and filter caps priced lower than anywhere, and I mean ANYWHERE. Still do.

This happens to me, also, at RS; they lie like Hell, and tell you it
is, "new-in-the-box",
until you get it home and find batteries in it because it was a
display, or returned item. I only shop there, when I have to; on
clearance sales, you can bet it is not, "new-in-the-box". I was lucky,
and found two discontinued, "new-in-the-box", RS radios that I use as
backups. This an interesting link, that shows how RS lies:

http://digg.com/links/Proof_that_RadioShack_tells_it_s_employee_s_to_lie_to_you.

I agree 100%. I blocked gottahaveit1995 from my bidders list a long time ago, and I also exclude Radio Mart in all of my saved searches.

I like to know the TRUE history of a radio, or at least recent history and honest assessment of its condition before I purchase it. Of course some people are going to lie anyway, but with Radio Mart you at least know up front that everything in the listing is false. It's a shame; he sometimes has what might be nice radios for sale.

It does help, thank.

Are you implying that you've actually used an Antenna -to- MLB -to- Coax
Cable -to- MLB -to- Radio setup?

you've obviously never been to our local flea markets here, Peter

I bought a pair of speakers for $10, that sold for $400 on ebay

an Old friend tried to pass off yet another tall tale:
> whinyslit_lloydie@yahoo.com wrote:

> > Get to telling us about your fake college degrees, high school dropout.
>
> Impoosible since I don't have fakes degrees I have real no r am I a hs
> dropout

I'll agree that you don't have any "fake" degrees...Because you
have NO degrees at all.

Your "degrees" are imaginary. A lie. Deceit. Like the rest of
your life.

You won't name the institutions, the disciplines in which you
allgedly were granted a degree, or when those degrees were
accomplished.

In otherwords...Not a single bit of documentary evidence that any
of your claims were even remotely true.

> you like demanding the impossible
>
> get help

YOU "get help", Mork. Stop your lying. "Get help" for your
devaint behaviour.

Today.

Steve, K4YZ

I also had a great time. This is my 43rd Dayton Hamvention in 45 years of being a ham. Yea, it's changed a bit, but still, IMHO, worth the price of admission. I found everything on my list, and at acceptable prices. Some things were indeed overpriced, but just walk away and keep looking. I'll not forget the old Johnson Speedex key (in excellent condition) that I bought from some guy in a cold drizzle for $8 a few Hamventions back. He was anxious to sell anything. Maybe the best buy I've ever made at a Ham 'tailgate' (or flea market if you like).
Of course it does help to be an hour away. No airplanes or hotel rooms does make it affordable and easy, no argument from me. If E-bay killed Dayton, wonder why all the people were there anyway. It was as crowded as usual.

I'm already looking forward to next year.

I honestly don't think $25 is that out of line. How much are boat shows, Home and Garden shows? Probably a LITTLE less but they draw from a much larger market and have significant vendor support.

I was hoping I'd see something in these groups about some new products or SOMETHING NEW...All I see is bitching.

C'mon, folks. Take things as they are. It's not going to be 1950 or 1970 or even 1990 again.

I do intend to go to the Hamvention next year...for the first time in 30 years!

I'll have to agree with this. I found what I was looking for plus an old Allied A2516 tube ham receiver practically given away because it had a blown fuse and missing cover screws. Other than that a great time seeing old friends, alot of new stuff, and the weather was perfect. I don't think Ebay can steal any of that. Maybe it wasn't the best place to find antique radios, but it's a HAMfest and old radios are not the majority of what you find there. If anyone thinks that the crowd is less because of Ebay, wrong!! Hamfest numbers have drifted downward in the past few years due to diminishing ranks in Ham Radio. Now if this were a computer show you'd see a bigger crowd. In short, you get what you get out of a Hamfest. Just because you don't find alot of give aways at the flea market doesn't mean it's a disaster. There is always plenty of other things to do. This is true for the smaller hamfests as well.

I'm not too far away, either. that makes it practical.

Perhaps those concerned about motel costs would do better to stay
in Springfield or even Columbus.

I stayed on the west side of Columbus one year [great new motels, great
restaurants], and near Hamilton another year [near to both a never ending
supply of Cincinnati chili and Jungle Jim's] -- worked out great both
times.

Doesn't matter, I'm not going to buy a, "used", new item from them,
especially, if is a display item that has been handled by hundreds of
people, or, a returned item that someone has fooled with, and may have
something wrong with it...

Just curious how these too compare as I can get either here in Austin TX.
Not interested in the Sony because It'd have to be mail ordered.

TIA

So which is it? Is "Hispanic" a race as you said in the first article, or
is it a linguistic grouping as you said in the second?

Yes. A friend who moved to this area said his Spanish wife was complaining
that there was so little Spanish culture in the area. For that matter,
years back the Argentinian wife of another friend said the same thing about
South American culture in general.

Personally, I stay away from Grundig/Eton/Tecsun, because Eton/Tecsun bought the rights to market products under the "Grundig" name, and they are now made in China, not Germany (I assume the YB400 falls under this). I have heard nothing but positive about the Kaito 1103 and Tecsun 1103 (check the reviews under Amazon and eham.net for all three). You could order the Tecsun 1103, off Ebay, for considerably less, unless you feel more comfortable picking up the Kaito 1103, in person. I bought a Grundig S350, now returned to Radio Shack, and it was the biggest piece-of-crap radio, I have ever owned...

Well, that's cute polemic, but under the laws of this nation as of the time I was born here, the 17th amendment says I'm a legal citizen. And my mother's parents immigrated legally when they came from Ireland. And although I haven't traced my genealogy back far enough yet, I'll bet that my father's ancestors entered legally as well.

Nice try. Texas left Mexico because nearly every single resident there
wanted to be separate from Mexico. The points west that you mention were
sold to the USA by Mexico, not taken. So they have nothing to legally
or morally reclaim.

I picked up two 100-piece bags of .1 uF bypass caps for fifty cents apiece
at American Science & Surplus a while back. That's more the exception
than the rule there, though, because they usually know pretty much what
items are worth.

Yea, $500 for a top-of-the-line portable SW receiver that doesn't even come with an internal ferrite-bar antenna, satellite antenna, or Digital Radio Mondale - ridiculous ! All told, up to $700 for the radio and antennas, plus $12 monthly and activation fees for satellite radio - in a few years the SW bands will be pretty much useless, too ! Count me out !

Yes, I was watching an old episode if the Andy Griffith show and if you've ever watched it you know that there's some radio gear on top of the desk next to Sheriff Taylor's, right where Barney Fife normally sits. One of them looks sort of like a Drake R-4C, but the particular episode I watched didn't offer a good shot.

Does anyone know what this gear is?

And by the way, what a classic show! Still in wide syndication forty years after it aired. Compare it to the crap that's aired nowadays and it really makes you think.

Steve

> I call bullshit. Name the dictionaries.

Oxford American, Encarta.

Encarta... not "fact of belonging to group"race 2

race [rayss]
(plural rac&#65533;es)
noun
1. group of humans: any one of the groups into which the world's
population can be divided on the basis of physical characteristics such as
skin or hair color
2. fact of belonging to a group: the fact of belonging to a group of
humans who share the same physical features such as skin color
a.. an attempt to end discrimination on grounds of race

3. humankind: humanity considered as a whole
a.. the fate of the race

4. biology strain of organism: a breed, strain, or subspecies of an
organism
5. wine wine's distinctive taste: the distinctive taste of a
particular wine, by which its grape variety or region of origin can be
identified

[Early 16th century. Via French from Italian razza , of unknown origin.]
Oxford

b. a tribe, nation or people regarded as of common stock.

Technically, it is a cultural group with only language as a common factor.

Hispanic can not be a race, as Hispanics can be of any race (Asian, Indian,
White, Black)

I recall that the radios were used as a prop and a character used it in
one or two episodes. You should get a bette look at it then. Could be a
false memory though.

I have not owned a TV since around 1980 but I have been rethinking that
as there are news channels and Discovery, History channels that I have
watched when visiting relatives.

The sitcoms and weekly TV shows are awful and I can't spending time
watching them.

The uber classic Satellit 650 was made in Portugal.

6593. Antenna -to- MLB -to- Coax Cable -to- MLB -to- Radio

Newsgroup: rec.radio.shortwave
Date: 2006-05-23 20:08:36 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148414915.934991.4860@j73g2000cwa.googlegroups.com>
Source record: 75851

URS,

Antenna -to- MLB -to- Coax Cable -to- MLB -to- Radio
[TV Antenna -to- MT -to- Coax Cable -to- MT -to- TV]
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9692
Actually this was quite common with many old TV Sets
and Roof-Top Off-the-Air Antennas.
TV Matching Transformer leads connected across the
two sides of the TV Antenna. Coax Cable from the
Antenna down to the TV Set. Matching Transformer
between the Coax Cable and TV Set. This arangement
usually gave better TV Reception then plain old 300 Ohm
Twin Lead with fewer Ghosts. - Many Old TV sets did not
have an "F" Connector Antenna Input.

Back to Shortwave Listening Antennas :
Yes - I have constructed and build a few types of
Shortwave Listening (SWL) Antenna using simple
TV type Parts and used the common TV type Matching
Transformer at the Antenna to Coax Cable connection
and at the Coax Cable to Radio connection.

TV type Parts List :
300 Ohm to 75 Ohm Matching Transformers
300 Ohm Twin Lead
75 Ohm Coax Cable
300 Ohm Terminals to 75 Ohm 1/8" Plug Matching Transformers
1/8" Plug
Hook-Up Wire
Speaker Wire
Landscaping Cable

Shortwave Listening Antennas made from TV type Parts :
* Dipole Antenna using Hook-Up Wire.
* T2FD Antenna using Twin Lead.
* Windom Antenna using Twin Lead.
* Inverted "V" Antenna using Hook-Up Wire.
* Sloper Antenna using Hook-Up Wire.
* Loop Antenna using Twin Lead.
* Fence-Top Horizontal [Flat] Random Wire Antenna
using Landscaping Cable.

For most Shortwave Receivers that have a Pair of
HI-Z 500 Ohm Terminals the 75 Ohm "F" Connector
to 300 Ohm Two Lead Matching Transformer works OK.

For most 'portable' AM / FM Shortwave Radios that
have a 1/8" Mono-Jack as the External Antenna Input.
Connecting an 1/8" Mono-Plug to the Leads of the
300 Ohm side of a 75 Ohm "F" Connector to 300 Ohm
Two Lead Matching Transformer works OK.

For a Second - Shortwave Listening (SWL) Antenna :
If you already have a good Shortwave Listening (SWL)
Antenna connected to the SO-239 Jack of your Receiver :
Then you may wish to consider a simple Windom
Antenna made completely of 300 Ohm TV type Twin Lead
or 450 Ohm Ladder Line as a second HI-Z Antenna
to use with your Receiver's HI-Z Antenna Inputs.
This type of "Windom" is an Off-Center Fed Folded Dipole.
Some people like to have the Down Lead Section
{feed-in-line} lay Flat {untwisted}; while I like mine
Twisted. Starting with a 100 Foot piece of Twin-Lead
or Ladder-Line a Windom Antenna cut for the 49m
and 31m Bands would be :
Tip-to-Tip 63.0 Feet
Long Arm Side of 38.5 Feet (1/4 WL 49m)
Short Arm Side of 24.5 Feet (1/4 WL 31m)
Vertical Down Lead of 17.1 Feet {Mounting Height}
with the rest used for feed-in-line to the Receiver.

find some wire and locate some space
- next build and antenna - iane ~ RHF

No Mike, I did not get a bad one - the S350 is a cheap plastic piece
of crap:

"Million-Dollar Looks for $100" - Analog w/digital display receivers do
not have the stability of digital phase-locked loop (PLL) receivers.

I opened up the back of the radio, before returning it to RadioShack -
it was mostly hollow inside, very cheap, low-grade plastic, and with
1960s-grade electronics. The front filter and band switches and tuning
knob are flimsy. When putting the radio back together, I was very
careful not to over-tighten/cross-thread the screws, but as soon as,
one of the screws started to tighten down, the plastic started to
crack. Because of the very cheap quality construction, the radio is
very light-out-of-the-box, until the 4 "D" size batteries are inserted.

The filters do a minimal job and only muffle the very good audio. The
RF gain control can always be set on maximum, so it only acts like a
DX/LOC switch. Even the newer model drifts off the tuned frequency,
despite a kludged fix, that only causes ergonomic problems - once a
frequency locks on, it still drifts, causing one to have to retune way
past the desired frequency, to break the lock. The S350 has significant
tuning backlash, which is partly responsible for the frequency drift.
There are images all over the SW bands, being a cheap,

single-conversion superhet. There are no station memories, so anytime the band selection changes, the radio has to be retuned to the desired frequency. The speaker grill is plastic, the digital readout is low-resolution, the antenna doesn't lock into place, and the carrying handle is cheap, smelly, imitation-leather.

Instead, I bought a Radio Shack AM/FM (for AM DXing) model 12-898 for $25; it has digital PLL tuning (prevents drifting), DX/LOC switch, hi/low tone switch, 3" speaker with metal speaker grill, internal ferrite-bar antenna, lock switch, 20 station memory, almost as sensitive as the S350, and much better quality - even the antenna locks into place.

Don't be fooled by the "Grundig" name - it used to be made in Germany, but is now made in China, by Tecsun/Eton. Check out the Tecsun/Eton brand of this radio on Amazon (same junk), and show, "lowest rating first", also, look at the reviews for Grundig G2000A. Tecsun/Eton is becoming known for marketing jazzy, pretty radios that are poor quality/performers; they bought the rights to market products, under the "Grundig" name, hoping consumers will think they are still made in Germany.

With all that being said, with the restructuring of the 50K watt clear-channel AM stations, in the 1980s, AM DXing is not what it used to be, in the 1960s and 1970s. For example, many stations out West now have to use directional antennas, that cannot be picked up on the East Coast. All the hype about the CCradio, Superadio III, and S350 being, "DX machines", is nonsense, and with the clear-channel situation, certainly not worth the extra expense. With the Radio Shack receiver, I can easily pick up WWL 870 New Orleans (1000 miles), WHO 1040 Des Moines(900 miles), WABC 770 New York, and my favorite, WLW 700 Cincinnati - same as the S350. These stations can easily be picked up with standard car radios.

For just, as little as $30 more, one could purchase the Sony ICF-SW7600GR instead, with digital PLL tuning, dual-conversion, SSB, and synchronous detection; or, for $45 + $20 S&H, off Ebay.com, one could purchase a new Degen 1103 with digital PLL tuning, dual-conversion, and SSB (the S350 has none of the above).

Source record: 75858

DE - Ethnicity = Ethnic Group
{Race May -or- May Not Be A Factor}
http://en.wikipedia.org/wiki/Ethnic
An Ethnic Group is a Human Population whose members
Identify with Each Other. Ethnic Groups are also usually
United by Common Cultural, Behavioural, Linguistic, or
Religious practices. In this sense, an Ethnic Group is
also a Cultural Community.
Hispanics as a "Group" have a common Heritage
{Roots}, composed of one or all three of these
Ethic Group Elements : Culture, Language and Religion

Hispanics {Mexican-Americans} frequently exhibit
"Endogamy" as an Ethnic Group.
http://en.wikipedia.org/wiki/Endogamy
Endogamy is the practice of marrying within a Social Group
often due to : Culture + Language + Religion

Ethnically Speaking : I Am An "Heinz 57" American [.]
[Mutli-Cultured + Mixed-Parentage + Speaks English]

and that be the end-o-me ~ RHF

Source record: 75866

DE - In-Fact the Government of Mexico Ratified
the Treaty of Guadalupe Hidalgo ~ RHF

The Treaty of Guadalupe Hidalgo was the Peace Treaty
that ended the Mexican-American War (1846-1848).
http://en.wikipedia.org/wiki/Treaty_of_Guadalupe_Hidalgo

We Stole It and Paid for It -and- They Agreed to It !
it's, It's. IT'S ! - a Done Deal [.]

Before that Spain Stole It for the Indians {Native Peoples}

Then the so-called Mexicans Stole It from the Spainards.

The modern day Mexicans are at best only 'part'
Native Peoples and in-fact True Native Peoples do
exist in Mexico to this Day : These Native Peoples
are the Only Ones with a Real Claim on the Land
of Mexico. All European and Semi-European
Ancestry Peoples should leave Mexico - Now !

Which leads to the point that the Only Ones with
a Real Claim to the American South-West are
the True Native Peoples of the South-West not a
bunch of Semi-Native Peoples from the Far South
Foreign Land of Mexico.

This same logic and rational also applies to Canada
The Native Peoples of Canada are the Only Ones
with a Real Claim on the Land of Canada. All the
European and Semi-European Ancestry Peoples
of Canada should leave Canada - Now !

Then Again using this same logic and rational
not to be Racist agains only the Europeans -
All Afro-Americans of All the Nations : The USA,
Mexico and Canada should also go back to Africa
and return the Americas to the Native Peoples
of Americas . . .

But then - Don't we all know that the Native Peoples
of the Americas came here from Asia and beyond
- Oops - Oh Never Mind !

today the way it is -is the way it is ~ RHF
.

eBay rarely enters into my search for antiques and it anything has
sharpened my abilities to find local goods.

So *you're* the guy... Bastard! I wondered why my s/w reception had
deteriorated recently. And now I know: some cretin took a power tool
and destroyed the ionosphere.

Let us all know ahead of time if you're gonna go "investigating" the
ozone layer with a hammer and chisel. That way we can stock up on
sunblock for the Summer.

6622. Cochlear Implants and SWR interference

Newsgroup: rec.radio.shortwave
Date: 2006-05-24 00:18:18 UTC
From: "bajohnson29@yahoo.com" <bajohnson29@yahoo.com>
Message-ID: <1148429898.240970.193710@j33g2000cwa.googlegroups.com>
Source record: 75880

I attended a meeting last week with Cochlear Implant recipients. One of the people there said her husband was a SWR operator and that when she gets her implant, it will interfere with 5 meters?? Does any one know anything about interference from an electrical device like a Cochlear Implant. I'm going to contact the manufacturer as well but this group probably has more expertise in that area than the company itself. Can you please help me??

Thanks.

6623. Re: Dayton HamFest killed by OBSCENE ADMISSION $$$

I wouldn't go quite THAT far BUT.... :D

> > Do the $$$ homework boys - you guys that run these ham events
> > are screwin yerselves faster than Barbaro broke his leg last week.

This not only goes for DARA, but also for the local Ham clubs as well.

Furthermore, the local clubs need to wien themselves off of using the local county fairgrounds for their hamfest site too. Problem is, where could they go besides renting out a sizable chunk of the local flea market that EVERYONE (Hams and non-Hams alike) go to?

Cheers & 73 :)

I have decided to do something that some would consider to be a little off the wall. :)

I have decided to put ALL of my Field Day Activities on my website via my cam site. It'll be LIVE and archived in Windows Media format. If possible, I also plan to run a SHOUTcast & Streamer P2P stream as well via Jeeper One Radio, my Talk/Old Time Radio station. It too will be hopefully archived and will probably run in repeat during the overnight hours on Saturday Night.

I plan to operate mainly on six meters USB and probably FM should there be an opening. If not, then I'll probably be band-hopping between 6 and 2 USB & FM with maybe a smattering of 432 USB and/or 446 FM if in the event there is NO six meter opening (Being a no-code tech, I am limited to bands 50 Mhz. and above).

It'll all officially start Saturday June 24 @ 12:00 NOON Mountain - 2:00 PM ET, 8:00 PM GMT and end Sunday June 25 @ 12:00 NOON Mountain - 2:00 PM ET, 8:00 PM GMT with breaks for sleep, meals, and times which the bands just simply are not open and idle.

The websites for everything in question are as follows....

WEBCAM - http://www.freewebtown.com/kb0oxd/webcam.html (Also simulcast on my videos page @ http://www.freewebtown.com/kb0oxd/webcam2.html)

JEEPER ONE RADIO - http://www.freewebtown.com/jeeperone/radio/ (Click on the LISTEN LIVE link)

Hopefully there'll be an opening on six. If not, well then, I guess I'll just be working the locals I suppose. :)

I'll also be logged onto EchoLink and eQSO for those informal non-FD off air ragchew chats with Hams (especially those out in the field with WiFi access). :

So again....That's Saturday June 24 @ 12:00 NOON Mountain till Sunday June 25 @ 12:00 NOON Mountain with the breaks I mentioned above. Feel free to tune in and log on. :)

Cheers & 73 :)

That is not "La raza" which is a Mexican expression of brotherhood. NCLR, of which I am a member, uses a definition of "raza" from a work of literature by Vasconcelos that refers to "the cosmic race" which is man after he sheds his prejudices.

PLL radios have their downsides. Once upon a time you could slightly
off-tune an AM radio and get brighter sound or avoid a whistle.

Okay, this was supposed to be a comparison, and I will give MHO: I owned two (2) YB400PE and I played with one G4000A. And yet, I have sold my both YB second hand... Yes, and I am happy! I now have a Degen 1103 (about a third price of a YB) and I am twice as happy! No question for me: 1103 is way a better (versatility wise, and what-not) than YB or whatever G4000A may be (I have not figured out the major difference versus YB). My advice: get a Degen 1103 and have FUN! Forget Grundig, which has been producing incredible lemons for a long, long while. BTW: I also own an S350 which indeed is miserable... and I hardly wait to get rid of.

My point: if you are looking for a very portable, sleek and performing SW receiver (general broadcast), get a DE1103.

Cheers,

Nic.

It's actually Degen that makes the 1103. They're from China too. Why
fault Eton though for selling China-produced radios?

The YB400-PE, aka the G4000A, is also larger than the 1103. The 1103
can decently fit into a jacket pocket.

cheers,

Hi Steve,
In the early episodes, the radio was a Motorola business band radio. The
whip on the squad car indicated VHF-LO (30-50MHz).
Later episodes featured an Eico CB transceiver along side an Eico 720
80-10M CW only transmitter- with a mic plugged in the front!

I have an Icom r-2 (two) and it isn't very good for shortwave. It may pick up a half dozen stations on a good night. I don't know how much better the r-5 is in comparison.

The Icom ic-r20 (twenty) may be a better bet. The Sideband reception is prety good and it goes up to 3 Ghz.

The SW2 may not use the same mechanical tuning encoder as the R8B. I
know the encoder on the SW8 is different than the R8B. I've never had
any problem with the SW8 encoder.

I have one of each. I have had the YB-400 for quite some time. The 1103 is a nice receiver for the money. But, the YB-400 is a superior radio in receive, sideband, sound, tone, sensitivity & selectivity IMO.

The 1103 is fun, and is pretty sensitive, the audio is not great, but the price is right.

One drawback to the YB-400 is the lack of a tuning dial, other than that, it's a fine radio. Out of all my portables though, I still use the Radio Shack DX-398 the most. I own a lot of them, but to me nothing equals the 398 in portables. It's also tagged as a Sangean 909, but that costs quite a bit of cash.

Last December, I bought a new Pioneer 7.1 home theater receiver. The model is the VSX-815, nothing real expensive, but a nice receiver for an apartment. It has all the features, inputs, outputs etc, to hook a lot of other gear to, like DVD players, recorder, VCR, games etc. Plenty of sound modes, and the Pioneer system of adjusting the sound for your room. I liked it.

Everything was hooked up, and operating just like I wanted. The surround was excellent, picture quality excellent on cable DVD, and VHS and I was not looking forward to re-wiring anything, because it's a big job for an old man like me. All I had to do was turn it on and adjust the volume, and sit back and enjoy.

Untill Tuesday. There was a power outage in my neighborhood, and my entire building and block lost power for about 2 hours. When everything came back online, the only thing that did not was the Pioneer, and it will not.

I'm pretty steamed. I bought the extra warranty, and I have a connection to where I purchased it, so I know they will simply replace it, but my question is, do I want another Pioneer?

I don't like de-wiring the entire harness for the two DVD players, the DVD recorder, the TV, the Playstation, the VCR, the 5 disc CD player the single disc CD player and my audio cassette recorder, plus the cable box. And I'm not looking forward to reinstalling everything.

I just bought a new scanner last thursday, so I can't throw a bunch more cash around right now, but I don't know about another Pioneer.

I have an old R-1 that I like to play with, but I would not call it a shortwave receiver.

But, it's a nice little toy to take with you or sit outside with to see what you can pick up. The R-1 is very small, so you can just stick in it your pocket and go, thats the only reason I bought it.

I have never heard anyone say to many great things about SWL on widebanders.

I use television for 3 basic functions, news, some sports and all the movie
channels cable has to offer. I love movies, but I will not go to a movie
theater. I have a fine movie collection, and I do enjoy football season.
So, I have a couple of nice TV's, other than that, regular broadcast TV is
not worth watching, IMO.

My computer has a DVD player and a big LCD display so that is what I use
to watch movie rentals or I go to the theater.

I have a DSL connection here and have been considering cable for a
broadband connection instead. I could add a TV video card and the
computer could also be the TV. Actually I have two LCD displays so I
could have the TV displayed on one and work on the other.

That's not a bad idea. The LCD display is what all the TV's are going to
now anyway.
I'll have say, the project of installing the vid-card and hooking up would
be a fun project too. I could not find any fault in that idea. Actually if
you watch movies on your LCD display now, may as well watch TV on it too.
That could prove to be a verstile hookup, with a DVD writer. Sounds like fun
to me.

I use the cable internet service, their cable TV and their digital phone
system too. It's all on one bill, a big bill, but I like it, and thats all
that matters. Everything is fast, clear and audio is wonderful.

The broadband is fast, even on my old computer. Although, I was thinking
about buying a new computer this fall. The prices at Comp USA are pretty
good. I was looking at a new Gateway with the Athlon processor. DVD writer,
all the goodies. All I'll have to buy is the PC, I already have a fine
monitor and all the peripherals

Oh, one other thing about TV/Video. I always taped my movies on VHS untill
about a year ago, I bought the Panasonic DMR-E55 DVD recorder. I love it,
and it has the new DVD Ram Tech. But here's the interesting thing. They make
some of the DVD recorders with hard drives, and you can just store movies
right on the drive in the machine. I thought that would be terrific, but
out of my price range. I just love electronics hobbies. I cant get enough,
and when I get started talking about it, I can't stop myself. So, please
bear with my protracted posts. I bought a new scanner last week, but I
don't want to get started on that, not now...But it's great :-)

Bought last week at the Shack. It's a handheld, triple trunking 1000 channel. Pro-97. I like it. Some cool features are the amber 4 line display, all the key's illuminate, and the audio is a pleasant surprise from a handheld.

The frequency coverage is exactly what I wanted in a handheld, because it covers Mil-Air, and my Pro-94 does not, so now I can listen to Mil-Air and not have to listen to Pro-2052 base unit.

The volume & squelch control are one of top of each other and that's not so great if you have big fingers.

It's easy to program, trunks like a champ and all in all, for the price, I'm happy I bought it. I use my scanner a lot around here, being so close to Wright Patt, and also to Springfield Oh, Air Guard. The scanners stay busy, when in the summer, SWL is not at it's peak.

All I remember was an EICO or SONAR CB, and a Motorola control head
for a VHF base station. Its on WGN weekdays.

I like the high tech electronics too but I don't like a lot of stuff
around and prefer an item perform more than one task if possible.

The new TV are amazing though. My brother just got a 50 inch plasma
display that looks pretty darn good. My 22 inch LCD computer monitor
looks small to me me now.

Problem is I'm not that good at multitasking. I can listen to the AM radio or short wave radio wile I do work or post on Usenet but I don't think I could watch TV at the same time.

That's very interesting. Stories have been circulating about that callsign for years. First time I've heard the details though. But it does explain a few anecdotes that do the rounds from time to time.

And I have to agree, a nine-day cycle of manic depression is not at all good. Some sufferers only have an episode every few months (or even years).

Nine days - yike !!

Ken (N8***)

The new plasma & LCD TV's are great. A buddy of mine just bought a huge Sony
HD and it was over 4 grand. Thats out of my price range.

6656. Hello, Africa! The Boervolk Elections

Newsgroup: rec.radio.shortwave
Date: 2006-05-24 08:06:16 UTC
From: NewsGuy <NewsGuy2005@gmail.com>

Source record: 75814

Hallo Afrika! Boervolk Elections/Verkiesing van Verteenwoordigers vir die Boerevolk.

Direct from Pretoria, South Africa, Dr. Lets Pretorious and Rehan Smith discuss the upcomming election for the Boerestraat, giving the history of the Boervolk and explains how a "volk" is more than a nation, with common blood and history. The upcomming election for this volk is an internationally recognized election. Dr. Pretorious also explains the difference between an Afrikaaner and a Boer.

The creation of the South African Republic in 1964 was not a Boer Republic, but a White Republic which marginalized the Boers. The Boers were further marginalized after the elections in 1994 that saw the Communist-run ANC take power. The Boervolk have never had any offical representation in either case, and the upcomming elections are part of an effort for the Boervolk to have autonomy for the first time in over a century.

Dr. Pretorious also discusses last week's riots in Cape Town by black security guards who have been on strike for the past two months, and updates on the progress of the Mayuba Declaration.

Why? there has certainly not been a groundswell of new listenership for SW.
One of the facts we deal with is the declining number of stations and
services.

No, it is NOT. Not EVER. It is usually referred to as the "council" or the "concilio" or the NCLR. "La raza" alone refers to the bond of blue collar, mostly immigrant Mexicans and Mexican Americans in the US and is not an organization or a group with a structure or form. It is just a term among equals. As an example, several US Spanish radio stations are called "La Raza" because they program to that audience and wish to sound part of it.

I have the Palstar R30CC .
The tuning knob was changed by Palstar to a new type with no "wobble"
and now
it's smooth as silk. You might consider getting it from palster
directly. Under $10 shipped and while
you are talkig to themask about the Collins filter they put in the CC
model

Hope this helps

Charlie

> > TIA

Finally, someone agrees with me about the miserable S350 and Grundig,
in general !
Cheers, Nic ! To the person who stated that PLL has its downsides -
well, it sure beats having to retune an analog receiver, every few
minutes. If one has to retune off the desired frequency by a Khz, or
two, wouldn't that be due to selective fading ? I would think one
would want to stay on the exact broadcast frequency with digital PLL,
and use sync. det. with selective side band, if available. Too bad the
G4000A is analog w/digital readout - wouldn't want to deal with another
S350 look-a-like, again...

If I'm selling and he's buyin for the right price

So be it...

If you idiots are so upset by Marty you do need to get a life....There are thousands of people that have bought his stuff that swear by it and him. You guys are just a couple of pricks that are pissed off because he's a better salesman than you are....For christs fucking sake you have been screwed all your life by anyone and everyone thats selling you anything at all be it new or used or from internet or a local store....your paying way the hell too much for everything you buy including food...gasoline and rent or house payments and taxes......your just not smart enough to figure out everyone else is fucking you.

Come on girls....play nice...bend over and hand Marty the vaseline...He sure as hell aint the first "DICK" in line after your hard earned cash.
After all your handing it to everyone else in the world and your not bitching about them !

Mike you got major fucking problems man.....you were a good poster here for a long time then you became obsessed about Marty....what the hell happened?...He turn you down for a date or something? Your bullshit comments are falling on the same ears they did months ago...weeks ago and days ago.....nobody gives a shit what you have to say anymore. Same old boring temper tantrum drivel.

Last but not least....Mike your really one to talk about selling "MINT" radios!

They need the little guys in white coats from the local friendly asylum to come for a visit and take them away. It's obvious that Scheissman is a mentally unstable individual. Not to mention one who lacks basic civility in any case. If one psychoanalyzed Roger, you would find the mental processes of a teenage boy rather than a 50 year old. It's all to obvious when all he can do is to pop off his mouth and make inane and often stupid comments on a daily basis. Even the town drunk has more sense than he.

sadly they can't take him away by force he must be a danger to himself
or others, and while you could makea case that he (a robeson for that
and other are a danger to those they slander on here the authories
don't takes internet slander very seriously

I rest this case. You don't seem to be able to say anything else. Even if I
were Canadian, you could just add one or two words, and the response would
be the same.

But you're not Canadian, you're a fake Hispanic.

Run along now boy, and try to get your panties untied.

How do you know? You convinced me that there are no surveys of short
wave listenership so how do you arrive to this conclusion.

Some international broadcasters are cutting back. The BBC listening is
not convenient any more but there is still much to listen too. Bands are
still packed with stations when the propagation is good.

Hello Sad:
All of your points are valid. This has been going on for a long time,
not only here on usenet on the air as well.

The gay freak not only attacks hams but also insults our fellow radio
hobbiest over in the CB & shortwave groups as well. No one could
possibly have known that Mark was a homosexual if he didn't brag about
it. Now the sick freak has even involved his elderly father in the
mess.

Don't worry about it,Sad. This too will pass. With his queer lifestyle
it won't be very long 'till the HIV sets in.

73,

Pretty easy to add backlighting to the HF-150. Some danger (cracking
display) and machining required but well worth the effort:

All radio ratings in the areas I am familiar with measure any listening to
radio, with no distinction as to band. And most permit reviewing respondent
level data (meaning you can see individual listening to stations that have
not enough listeners to statistically "show up" in the ratings rankers).
Whether it is Karachi or Brisban or Quito or the US or other places I have
seen ratings, I have never seen any SW station register, going back to the
60's. Of course, the ratings are don in cities, not rural areas, so I know
there are exceptions.
>

But it is still not broadly listened to, and local services like the Latin American stations serving regions or countries, are fading fast, making SW even less interesting.

LMFAO, you are a member (why, I don't know, since you are not of 'La Raza' nor are you Hispanic). And if you don't think NCLR isn't referred to at times simply as La Raza (by both members and non-members) you're fooling yourself (but then again, that seems to be a regular occurrence on your part).

I was listening to a G.E.AM/FM/Clock radio at the Goodwill store.JT and Dave (www.supertalkms.com) were doing one of their Alabama Dumb A.. news thingys.A woman at work got wind that another woman was at her house with her hubby.She jumped in her car and went home and she caught that other woman in the ''act'' with her hubby.She grabbed a can of Raid and went upside that other womans head with that can of Raid.(all of them wimmins in the Goodwill store were listening to that G.E.radio) Who needs Clear Channel when we have JT and Dave reading Alabama Dumb A.. news on the radio?

That BellSouth woman who lives next door to me went fishing last Friday morning.She didn't show back up over there untill yesterday morning at about 9:00 AM.(Hooo weeee,did she look raunchy!,she caught some fish though,including a mall Shark) About half an hour later,she had her BellSouth uniform on,had to get to work.

Last night,I was at her back screen door,she started hinting around at me that she needs somebody to help her get her camper (1976 Dodge chassis mount camper) to Grand Gulf (Grand Gulf,Mississippi) so she can use it when she goes fishing.I flat out told her like it is,,,, I just am not up to making any long distance trips like that.She has a cousin guy,she can get him to help her get that camper to Grand Gulf.That's why I can't drive to any Ham Fest thingys.(unless they are within twenty miles of me) I just can't go.

DE,

The direct {simple} Translated of 'La Raza' means "The Race"
Now the implication of "La Raza" to many Mexican-Americans
may be 'Brotherhood' {Ethinic Solidarity = Cutural Unity} : But
THE CAUSE of "La Raza" to the Radical Political Leaders of
the "La Raza" Movement is Racial Dominance of the Mexican
{Meixican-American Culture} Ethnic Peoples over "The Gringos'
{the American Anglo-Europeans} and all 'other' Americanos
including African-Americans and Asian-American and YES !
even the original Native Americans of America. Consider the
Second-Class Social Status of "Los Indios" in Mexico.

DE - Truth "Brotherhood" is about The-Brotherhood-of-Man
and not about the Ethnic, Cultural or Racial Dominance of
one Group over all others. "La Raza" is not about the
Unity-of-Mankind it is about Domination and Subjugation
of All Those Peoples Who Are Not "La Raza".

Is La Raza Racist ?

I finally have an office where I can have a radio. Unfortunately it is on the bottom floor - more or less a basement and has no window. I am getting a CCRadio Plus (yes I have read the pros and cons but I got a good deal relatively speaking to the list price, and have a 30-day trial). My opinion is that I may need some sort of other antenna especially for AM and maybe FM too for that matter due to the possibly poor building location, plus it is a small town so the best stations are at least 50 - 100 miles. I know about the selct-a-tenna etc. Crane sells but am not eager to pony up more $ should I need an external antenna. Is there anything that will look suitable for office use that I can add to the external antenna jack on the Crane if I need it that won't set me back a lot more cash? Thanks.

Well, they were bought rather than conquered OR taken over by the residents,
but the fact is that Mexico doesn't look to have been the type of nation
that would have turned down a good fight. My look at history suggests to
me that they took the money, knowing the residents would revolt and seek
statehood anyway.

The radio has a built-in 8-inch ferrite bar antenna, so simply
rotating the radio should be sufficient for bringing in most stations.
Otherwise, the manual recommends a 50 foot wire on the jack as an
external AM antenna. You could try that as a cheapo option.

I have the Select-a-tenna device, and it works extremely well on weak
AM stations, "if" they are in the clear, frequency-wise.

There's no jack for an external FM antenna, so short of coupling
something to the built-in whip, your options are limited.

It's a good radio, but don't expect miracles.

That's the general area of the DGPS beacon stations, though to my knowledge
none of them sends any CW, only the MSK tweedling sound heard when a BFO
is used. Also, I believe they're all on odd frequencies like 297 KHz.

Can someone please explain the major differences between simplex, half duplex, full duplex, etc. ?

What is there inherent in the theory that prevents two way conversation, like on a phone line, in the simplex mode (such as in maritime VHF/fm ship to shore conversations) ?

Thanks,
Bob

Absolutely - in an emergency, it is not only the employer who must be able to communicate with the worker, it is also (1) police (2) fire (3) medical personnel (4) practically everyone. And the best way to communicate with the basic populace is you guessed it - speaka da language of the basic populace.

In any case, it just feels and works better if you can fit in properly.

There is nothing inherent in the theory that prevents this. It's just
part of the communication system design.

5/24 Followup:

I had to buy a bulk quantity of push/pull panel fasteners even though
I only needed one for my radio. The female sockets are identical to
Zenith OEM in fit and appearance.

The male portion of the pin has a slightly smaller head but works
perfect. (you can also use an original male pin in the new female
socket).

If anyone needs these email davefr at gmail.com. I'll be glad to
supply some of my surplus to others that are in need.
$3.00/ea or 2 for $5.00. (add $1 for freight for US)

These are them:

Greg,

It is helpful for hearing band openings or if you get an antenna
adapter to connect a longer antenna to it but then it becomes a
non-portable radio!

I found that if I hear more than two or three stations in a band, then
I get my ICF-7600 out and tune the rest of the band (and many more
stations) with the Sony. So use it to spot bandopenings and then go
to your "good" set to hear the rest of them!

Warren

This would require a lot more hardware. Modern transceivers share much of
the circuitry- so it cannot be used simultaneously for TX and RX.
From a logistics standpoint you would obviously need 2 channels of
sufficient separation to allow reasonable filters to isolate the TX from the
RX- and likely separate antennas- although a single antenna may be used if
more complex filters are incorporated.
All in all, a lot more complexity and $$ for little benefit.

DE,

The Radio Life - It is a Generational Thing !
Every Two Decades a Generation of Radio Listeners
and Non-Radio-Listeners has come and gone . . .

After World War II things started to change . . .
for Radio in the American Home and as a
Form of Entertainment for the American Family.

At one time a Radio AM and later FM was the sole
form of Electronic Entertainment in most American
Homes excluding a Phonograph {Record} Player.
And most homes had a Radio in the Living Room
and Kitchen. Plus Radios were in every Car.

In the 1950s and 1960s the TV became the main
source of Home Entertainment in the Front Room
with a Radio still in the Kitchen. Clock Radios
moved into the Bedroom. Radios were in Cars.

In the 1970s and 1980s the TV / VCR / Cable
TV was the main source of Home Entertainment
in the Family Room with TV now in the Kitchen.
TV had also moved into the Bedroom. Radios
were in Cars.

In the 1990s and 2000 the TV / DVD / VCR /
Cable TV / Satellite TV is now the main source
of Home Entertainment in Every Room in the
House. Radios DVDs and Satellite Radios were
in Cars.

EVERY TWENTY YEARS A NEW GENERATION
of Home Entertainment Seekers has their own
Life Experience of what Home Entertainment IS.

* For the Children of the 1970s TV etc is their
common everyday standard of What Home
Entertainment IS - And Radio was something
you had to listen to while you were in a Car.

* For the Children of the 1990s a Home PC and
the Internet plus TV etc is their up-graded everyday
standard of What Home Entertainment IS - And
Radio and CDs were something you had to listen
to while you were in a Car.

Where the Child of the 1950s Experienced and
Knew Radio as a Part of Their Daily Life - - -
The Child of the 2000s has Not Experience Radio
in, of, and by-itself; and Knows Not Radio as the
Center of Their Home Entertainment Life.

it's about radio - stay tuned ! ~ RHF

I own a Pioneer Onkyo AM/FM Strereo Radio.(I don't think they are the best though) I bought it for $5.00 plus $3.00 each for the two Pioneer speakers at a Goodwill store last year.A few months ago,I took the cabinet off to see what was making that rattling around noise in there.(It was two dimes) I haven't gotten around yet to seeing if the radio works.Because I have gotten soooooo fat and lazy and I don't really care if the radio works or not.

WHRA is indeed the old WCSN, with a change in callsign and license
location. The original WHRI site in Nobelsville, IN has been
de-activated. One of the original 100 kw transmitters in supposed to be
re-located at WHRA, and the other is to be moved to Cypress Creek.

Robert11 wrote:
> Can someone please explain the major differences between simplex, half
> duplex, full duplex, etc. ?

simplex: both stations transmit on the same frequency. Only one can
transmit at a time, or they'll interfere with each other.

half duplex: one station transmits on one frequency, the other on a
different frequency. Due to equipment design only one can transmit at a
time. Commonly used over repeaters, full duplex devices that
rebroadcast a signal on a different frequency.

full duplex: stations transmit on different frequencies and both can
transmit at the same time. Analog cell phones are a good example, as
are cordless ones.

> What is there inherent in the theory that prevents two way conversation,
> like on a phone line, in the simplex mode (such as in maritime VHF/fm ship
> to shore conversations) ?

both ends are transmitting on the same frequency, so if they both talked
simultaneously they'd interfere with each other. (and your own
transmitted signal would overwhelm the much weaker signal from the other
guy)

Except in Denver, it is. All the time.

But then, you say that a letter soliciting participation in Arbitron
first doesn't exist, then doesn't qualify as a recruitment effort,
THEN is experimental in only two markets, despite other people getting
them outside those markets.

You claim tht "HD" AM is great, despite many reports by actual
engineers who say otherwise.

You claim that no listeners exist outside your little market slices,
despite the many who personally explain that they listen.

Your claims have no weight at this point. Perhaps the Flat Earth
Society can use your services -- I think you'd fit right in.

I had excellent results using copper alarm tape from Rat Shack to use
as an antenna. Even soldering wire to it (not while it's on the
window!) turned out to be pretty easy. Put the tape along the edge of
a window but not up against the frame itself -- if you have window
shades, the top of the window may be your best bet.

"Raza" in Spanish means much more than "race" and inacludes things like the
English "breed" as in cattle, dogs, horses, and many others. In the
Southwest, it means "the people" (equivalent of "pueblo" in other Hispanic
areas) or the working class of Mexican immigrants. It s ageneric term,
applied to even names of radio stations appealing to this greoup, like KLX,
La raza, in LA. You can even say, "Juan es raza" meaning that Johnny is one
of the common folks.

The NCLR is never referred to as just "La Raza" which is a generic term for working people.

Some equipment has processors inside that get scrambled. Find out if it
has a power on reset or clear. It usually requires you hold a button
down some number of seconds when you turn it on.

No, it is not. In Denver, if you hear "la raza" you are hearing a common
term for working class Mexican immigrants. NCLR is not well known in the
immigrant community... but the term "la raza" is very common. A gouy going
into a bar might say to friends he finds, "Quih�bole raza" which means,
"wazzup, bro" or you might se a "Viva La Raza" sticker, meaning "Up with the
people" or "Up with the common folks."
>
> But then, you say that a letter soliciting participation in Arbitron
> first doesn't exist, then doesn't qualify as a recruitment effort,
> THEN is experimental in only two markets, despite other people getting
> them outside those markets.

The letter has been used in tests in several markets, but not applied to the
survey, just a pilot test group. It will be used later this year in areas
where response rates are low to make actual recruiting easier, per Dr. Ed
Cohen, the designer of the Arbitron swample methodology with who I had lunch
yesterday.

Again: the letter is not pat of the survey methdology. The letter is not a
recruit... it is a warm up to encourage people to take part in the actual
recruit process of which the letter is not part. Again, per Arbitron, the
letter is not a recruiting letter. It is a warm up to make people more
likely to respond to the actual recruit process . Less than 0.9% log on to
the website or call back... so it is really a way to make the home more
receptive when a call comes in.

>
> You claim tht "HD" AM is great, despite many reports by actual
> engineers who say otherwise.

Since we have several dozen working and working very well, and I can name
the stations and engineers, I will wait for your list of engineers who have
actually worked in HD installs and have other opinions. I know nobody who
actually has an HD install who is not pleased.
>

> You claim that no listeners exist outside your little market slices,

However, audience measurement, in every US county and every US metro shows an enormously small number of people actually do this, despite your meaningless anecdotal evidence.
>
> Your claims have no weight at this point. Perhaps the Flat Earth
> Society can use your services -- I think you'd fit right in.

I actually work in radio, and with multiple successful stations. From your posts, you don't really understand how the business of radio works.

"La raza" is an expression for working class Mexicans in the US. It means
"brotherhood" or "the common people" or just "the people." When said as
"raza" or "la raza" it does not refer to the NCLR.

It doesn't. I checked the receiver, and the book, and there's no reset. The only reset is to set the receiver back to factory settings, but it has to be powered on to do that, and it will not power on.

My brother seems to think it's a fuse, but I dont want to take the top off. It's going back, in the afternoon, and they are going to give me another one. I hope it works out, because I really like this model, for my apt size, the sound, speration and audio special effects on the "advanced" 7.1 settings are superb.

The sound is qulaity is great. It's my 4th Home Theater receiver since they have been making them, and by far the best. So, I'm anxious to get it all hooked back up, to enjoy weekend movies. The movies channles on most weekends premier some good ones. Last weekend, I enjoyed the new War of the Worlds, The new Batman and Stealth. I liked them all. I enjoy cheesy B style action movies too. When they fire guns, the sound goes across the room to the back and side speakers. Then, like helicopters or jet aircraft start at the front and zoom to the back. What can I say, I love it...:-)

My ex-wife told me I would never grow up, and I think she may have been right.

I had a similar experience with my Zephyr, microwave, and (hot damn!...back on topic...) my I.C.E. active splitter, and one of my shortwave radios. There was only a reset to return to defaults on the radio, and the radio had to power up, which wouldn't do. This after a power outage. The microwave had no reset.

There is often a surge, usually a back emf somewhere in the building, that follows a catastrophic power failure. Or the surge may be related to, or part of, the power failure itself. This can produce some nasty impact on sensitive gear.

In the case of my ISDN tranciever, a board had to be replaced. The I.C.E. splitter went back to the factory for refurbishment. In the case of the microwave and the SW receiver, they both came back after being off line and unplugged for 24 hours. The microwave continued to show symptoms, and required a microprocessor replacement. The SW is still rocking today.

As a result, all my hardware, including all my radios, and ancillary gear, are now on surge protectors, as are my computers. And despite several power failures since, and my own generator start ups, no further incidents have been experienced.

I've also noted a slight reduction in noise in the radio room.

Most home theatre receiver manufacturers recommend at least rudimentary surge protection to keep microprocessors from being fried.

My suggestion would be to get a good one. I use the Tripp Lite Isobar series in the office and on all my electronic gear. Not only is the protection good, but Tripp Lite offers a substantial equipment protection guarantee (though there are substantial hoops to jump through to collect), and they design the stips with real world users in mind. Wall warts do not block adjacent outlets.

Not cheap. Worth the investment.

If this is a steel frame office building, your reception in the AM band and lower frequency SW bands will be very poor. You'll need to sneak a wire outside and up toward the roof.

Even FM reception in a basement will be limited to local stations. You gotta get something up on the roof.

HD uses spectrum that is not, in today's environment, generating significant listening (fringe signal listening in other words) and uses it to enhance radio stations so they may better compete in a world with alternate delivery paths and an obsession with digital sources. It is, in effect, a no-brainier trade of a few cents for many potential dollars.

FWIW Just read the only difference is the G4000A Has a new snap on case
but otherwise the same as the YB400PE.

Also thanks for all the replys regarding the 1103. I think I'll go that
route as I like the smaller size compared to the YB, and more memories.
From the pics I saw its' backlight has a warm orange glow to it (sorta
retro) and I also like that.

And I keep telling you, Brenda, that the radios will eventually improve
and come down in price.

I showed you that new Radiosophy model. Much improved over the
BA-Recepter HD radio.

Things will get cooking once they figure out how to squeeze all the
necessary electronics into a radio the size of a cigarette pack.

It's funny. My last name is Weil. And yet I'm considered "hispanic."

Why? Well...let's see. My mother - surname Salazar was married to a German guy named Weil.

She divorced him five years later....we left Germany for the USA. I was raised - as a first-generation immigrant American - in a Spanish speaking household (with bits of German and English thrown in).

I learned to speak Spanish. REAL Spanish, not this Spanglish stuff the kids and grownups do now.

And yet, I'm a pale-face. Hey guess what. Colombia has a great big majority of people who are white. Not all of us are brown/black with ultra-curly hair.

Just like any other nationality, the racial spectrum in Latin America is varied. We even have "oriental-looking" people.

EFR,

Yes Copper {Foil} Alarm Tape can be put to use as
Loop Antenna around the Window about an Inch or
two away from the Metal Frame of the Window.

If the Loop does not work 'cut' the Tape in the middle
of the Loop and try it as a Folded {Bent} Dipole. The
Dipole-on-the-Window usually works better for FM Radio.

Also if the Copper {Foil} Tape is too much of a Eye
Sore - Then try very thin Magnet Wire with a few
pieces of Scotch {Clear} Tape to hold it in-place on
the Window. The Magnet Wire on the Window
usually allows for several turns about and Inch
apart either as a Loop Antenna or as a bent spiral
Random Wire Antenna.

just my two cents worth - iane ~ RHF

Bob [K5QWG],

Yes the Select-A-Tenna placed near a Window or
Out-Side {Exterior} Wall where the AM/MW Radio
Reception is good can be one way of 'importing a
Signal from a remote location to a Desk inside an
Office.

Use Speaker Wire {Twisted} with an 1/8" Mono-Plug
on one end to plug into the Select-A-Tenna and
connect the two Wires on the other end to the
Terminals of the Radio.

hope this helps - iane ~ RHF

"Raza" does not mean "Mexicnas." It means blue collar Mexicans, mostly in the USA. A middle class Mexican or Mexican American will not be "raza" and will be, on occasion, offended if called "raza" because it is demenaning to most better educated and cultured pople.

"Raza" when applied to one person means "buddy" or "bro" and to a group, "brotherhood" or "all of the folks like me."

An LA radio station's morning personality had billboards that said, "El Cucuy es raza" meaning "Cucuy (the guy's nickname) is one of the common people."

Most have none. The "Aztlan" movement, limited to a few thousand, wants to build a Chicano nation divorced form both Mexico and the US. Chicanos, though, are not Mexican.

Something is only interference if it interferes which listening to something
else. Since there is only a minuscule amount of interest in listening to
distant signals outside their primary coverage areas, for most people there
is no interference at all.

I'm going to wait until a true pocket-portable unit comes out....maybe
at an attractive price of say US$100.00 max? Hopefully one that uses
standard AA batts and not some proprietary rechargeable thing like
cell-phones.

And a nice small table-top unit about the size of the Recepter HD, but
at a $100 price - along the lines of the Kloss Tivoli #1.

By then we'll see if this IBOC system will be the future of terrestial
radio.

And THEN I will pounce. And I'm sure many others will, too.

Eventually, consumers won't have a choice. Every new radio will be an
IBOC receiver.

They are bombs only when in the US building codes allow wood frame
construction on the coast. I have been through hurricanes that gusted at
over 200 mph in Puerto Rico, where construction is reinforced concrete,
right down to the roof, on residences other than shacks, and they go through
those storms unscathed. Most damage is limited to fallen trees, signage, and
stuff left lying around.

If you don't have shingles, none can be blown off.

The powerline fuse is normally on the back on the radio. Release the
fuse holder; visually inspect the fuse; if the metal strand is broken,
that's your problem.

Your manual should show you exactly where the fuse is.

No, there was no fuse on the back of the receiver. I just got back home with
the replacement, so now I have to re-wire all the other equipment. But, I
appreciate all the feedback. Thanks.

We generally stay at the Holiday Inn at one of the Sidney exits. $69 Thursday night (business rates), $59 Friday and Saturday nights. Can always get it, it's outside the sphere of influence of the Hamvention. 40 miles or so to Hara, but that goes by real quick. Sits right beside a Bob Evans restaurant, and across the street from a Waffle House, so breakfast is guaranteed to be good, which is all you need. Dinner can be taken anywhere near the Hamvention, then just drive back north. If you don't have an 8 mpg truck, its just fine.

I disagree. Take a look at the Tivoli Model 1 - a sample of which I'm a proud owner.

Would you have seen a small radio like that have the kind of sound quality that it does? That's been a big improvement.

Years ago, to get hi-fi sound, you would have needed a console with a 12" or 15" speaker. Or a table-top with at least an 8" speaker.

To squeeze that kind of quality out of a 3" driver back then....I don't know if it was possible.

Then there's the FM tuner section - compare it with one of those drifty, deaf Sarkes-Tarzian or Granco FM units from the 60s? Not even close.

Does anyone here monitor 6 meters? Has it been op lately? I'd been keeping an eye on this (http://dx.dxers.info/) spot chart for activity and lately it looks pretty active. Just curious - I don't have 6 meter xmit or receive capability but want it.

- Matt

Yeah, right. That is why my kids all speak with me in Spanish, I read in Spanish, think in Spanish and spend 90% of my time with Hispanics.

As usual... the example being your rabid hatred of all things Canadian... you just enjoy spouting hatred to get a reaction. And like the good troll you are, you get reaction from nearly all of us here. I suppose "don't feed the troll" is applicable, too. You come with just enough "real" DX information, most of it probably lifted from Hauser or DX reflectors, to seem credible. You may be an OK DXer, but as a human being, there are shortcomings.

Hey? How about the new Canadian-Made ICOM R-75 that beats the Drakes all to hell and back? (The preceding was high protein troll food. Gorge!)

If even ONE person is trying to listen to those signals (and a lot more than
your ratings tell you ARE doing so), then it's interference.

I for one, and obviously many others in this forum, resent being minimized
to an 'insignificant number'. You'll find out that we have a lot more
economic power than you think we do.

Source record: 76002

I think I heard they (BCQ) were going to wind for some of their power.
I wonder if a wind mill ever blew down in a storm.

Coming back from Rochester NY on Monday and wife says, "what in the
heck is that?" It was a tracktor trailer with a giant windmill blade.
Sure enough a couple more of em just behind it.

windmill trivia - the windmill rotor doesn't have to spin at
synchronous speed with the power line. An inverter can be designed so
that it takes the windmill output frequency and converts it up to the
power line frequency. If rotor is at 30Hz then inverter is at 30Hz to
put 60Hz onto the line.

regards,
NEO

Windmill Trivia.
Smokey Yunick once put up a windmill generator at his garage (Best Damn Garage In Town!) in Daytona,Florida.The Stupid Daytona city A..holes made him take it down!

More Windmill Trivia,,,,,,
There is at least one windmill generator that I know of,(I took a couple of pictures of it last year at Celtic Fest and I snail mailed those pictures,along with some other pictures to that married Irish woman wayyyyy over yonder across the big pond) wayyyyyy up on a tallllll steel tower here in Jackson.

Stick a big a.. windmill generator up on your land area and watch the Stinking city nail you!

A "burrito" is American, not Mexican.

I know some, but very few. "Raza" is a blue collar term... not one of distinction. I am not sure I know any US born Hispanics who call themselves "raza".

However, I know most member of the NCLR are born here... and educated, etc. But that is a totally different meaning of the word.

> If even ONE person is trying to listen to those signals (and a lot more
> than your ratings tell you ARE doing so), then it's interference.

As I said, the trade off between the vey minimal if not non-existent listening to fringe signals is a fair trade for making all of radio viable as consumers want a digital product. The more listeners get accustomed to superior delivery and quality, the less they will listen to less-than-perfect fringe signals.

And the ratings are extremely accurate in measuring who gets listened to where. The fact is, very few listeners tune in distant stations. And, unless radio takes some positive steps, the stations will cease to exist... and then there will be no interference at all, which might make you happy.

In the early 30's there was a great furror reported in RaDex by listeners who were appaled that stations would operate 24 hours a day, thus preventing them from hearing farther away signals. They also wrote the FCc to complain that putting multiple signals on one frequency prevented them form hearing co-channel stations they wished to hear.
>
> I for one, and obviously many others in this forum, resent being minimized
> to an 'insignificant number'. You'll find out that we have a lot more
> economic power than you think we do.

You are so few as to be unmeasurable. Since radio... especially nearly 100% of AM radio... is advertiser supported, the issue is whether a tiny number of out of market listeners can be used to charge more to advertisers. First, advertisers do not buy out of market signals to reach other markets. Second, the ad budgets are by market, so out of market coverage is of no value. And, third. the numbers are so small they would not make a $1 difference in pricing.

Tell an LA station that it should spend time trying to get more money out of an advertiser for its listeners in Riverside when they are pitching $2000 dollar spots and you can buy a local riverside station with more audience for $25 to $50 a spot. Or tell one of 50 stations in Albuquerque that it

should be getting a few dollars more for coverage in Roswell when the local market is so over-radioed that upping rates a dollar or two would cost hundreds of thousands in business.

And, it does not make any difference if you are all millionaires. You can not be quantified and thus can not be marketed in a business that works on quantification.

6906. New - Low Impedance AM {Medium Wave} VLF LF Loop Antenna design by W1VLF

Newsgroup: rec.radio.shortwave
Date: 2006-05-26 02:44:33 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148611473.046962.179980@i40g2000cwc.googlegroups.com>
Source record: 76014

Steve,

New - Low Impedance AM {Medium Wave} VLF LF
Loop Antenna design by W1VLF
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9756

Actually - I have looked at this new Loop Antenna
that was designed by W1VLF and find it interesting.
http://cgi.ebay.com/_W0QQitemZ9729415901
http://cgi.ebay.com/NEW-Low-impedance-AM-VLF-LF-loop-No-tuning-low-noiz_W0QQitemZ9729415901

W1VLF Says - - - Hello Folks,
Here it is!! Buried deep in the hills of Harwinton Connecticut
the W1VLF Antenna Research Facility has developed a new
Low Impedance Loop Antenna.

This Loop Antenna is Round for those of you who prefer
that Shape and to the Stodgy Square.

The Round Shape Loop Antenna allows me to eliminate 7
of the 8 Solder Connections which Lowers the Impedance.

The Flat Solid Copper Strap is 4" Wide and has about 3
Times the Surface Area of the Square Loop Antenna.
The Copper Strap is 0.064" Thick which is plenty Strong
to hold its Shape.

The Diameter of this Loop Antenna 18" which is significantly
Smaller than the former Square Loop Antenna design.

HOWEVER

The Improvements in the Materials used in Construction,
and lack of Solder Joints make this Loop Antenna very
efficient.

Many Hours were spent on Testing Signal Levels on
Frequencies from 24 KHz to 1700 KHz. Signal Levels
are only 1 to 1.5 DB down from the much Larger Square
Loop Antenna.

The Copper has been Brushed, and then Coated with
Several Coats of Lacquer and looks beautiful!!

The Loop Antenna is 'lower profile' than the Square
Loop Antenna and should blend nicely where covert

operations are needed.

For 'lower profile applications' the Copper would be
not be Coated and left to form its own Patina.

This Loop Antenna comes with the standard recessed
UHF Female Coax Connector {SO-239} , that is protected
from the elements by the Detachable Mast. The pictured
Wooden Base is for Show {Demonstration Purposes Only}
and not included in this Auction Sale.

The Amplifier for this new Round Loop Antenna remains
the same; except it has been Labled more Professionally.
{please forgive the old pictures}

Ask me about the new Active Antenna in the Skunk Works
{under Design and Development} even as we speak!!

Questions, Comments, Please let me know

7415 up and running at 0340 check.

This via DXLD:

Thursday, May 25, 2006, 8:00PM EDT -- WBCQ 7.415 MHz is offline due to
a transmitter problem. Programming scheduled for 7.415 MHz shall air
on WBCQ 5.110 MHz as appropriate. We apologize for the inconvenience.

Larry Will

So perhaps there were other problems as well as a power outage.

Only if it is understandable.

> I was offering an example of how someone not born of a culture could
> subsequently be classified as acculturated by their acquired tastes as
> you claim to have been.

It is hard to follow syntax when you say such things as the clumsy "mestizo
del Americano Ind gena" and such. "Soy mestizo, mezcla de indio
norteamericano con francocanadiense" makes sense, not what you wrote, which
is Babbelfish quality.

> ...and yes a burrito is a chicano creation sold primarily in America,
> but almost exclusively at "Mexican" eateries.

Actually, it appears, much like Chile con Carne, to be an American (and not
"Mexican American") creation inspired in Mexican cuisine.

As a second follow up, more seriously: he came to the US illegally. He worked as a cement and mortar carrier in construction in Fresno. Moving to LA, he continued to work construction, and became an unpaid sidekick to a morning show on KTNQ in LA, contributing character voices of central Americans (he is Hondure&#65533;o). He was finally hired by Jos&#65533; Liberman of KWIZ in the 80's, and Liberman paid to do the legalization of his residency. It took him over 20 years to get where he is now, working free for the first 4 or 5.

Whether he has money now, he is definitely of the people. On the other hand, trying to pretend that a Honduran is "raza" failed, even with a $1 million dollar ad campaign. Ten words out of his mouth, and it is obvious he is not and can not be raza.

In the recruiting call, they "ask" about your favorite stations to "warm you up" to survey taking, to show how easy and "fun" it is. They actually do not record ANY of this... it is just a preamble to get you to accept participating in the survey, which is written in a booklet and takes a week.

Oh, Arbitron has not been in Beltsville for about 25 years. It moved to Laurel in the late 70's, and then to Columbia over 15 years ago.

> Not that I care about its programming, but that it's such a tricky catch
> in San Diego right next to KFMB (760). I have to use sync-detect.
> I also wonder what weight my opinion carries to the surveyors when I

Since what you say verbally is not recorded, all they are doing is letting you get into thw swing of things. Even if they recorded it, someone else would edit the data and use a lookup tool to determine the validity of the data.

> FWIW: Commercial stations all suck
> and the bands would be better off without them.

Which is why 94& of all people 12 or older listen to radio each week, and the average person spends around 20 weekly hours doing just that.

> Our two current FM pirates, FRSD (96.9)
> and RadioActive (106.9)
> are the best San Diego has to offer.

The folks at 106.5 are aware of RadioActive and have triangulated it and presented a complaint to the FCC with the full data.

A. It is "Boricua" and it means "puertorrique�o" and is not a dialect or accent.
B. There is no similarity at all to to the Honduran Spanish accent.
C. There is only one Spanish.
D. There is no Central American accent. A Panamanian accent is as different from a Guatemalan one as the English of Mobile, AL is from that of Leeds, England.

Anecdote. I was consultant to the station that had El Cucuy many years ago, while working at stations in Puerto Rico. I got cassettes of the show to critique. I would play them in my office, where my staff would come and go, shaking their heads, saying, "what is that? I can't understand a word." It was, of course, the Honduran Ren�n Almendarez Coello, El Cucuy, and the Boricuas could not understand him.

6927. Your AM/MW Radio plus AM/MW Loop Antenna - Three Ways to Use Them Together

Newsgroup: rec.radio.shortwave
Date: 2006-05-26 07:19:28 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148627968.673535.142770@y43g2000cwc.googlegroups.com>
Source record: 76035

Bob [K5QWG],

Your AM/MW Radio plus AM/MW Loop Antenna
- Three Ways to Use Them Together
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9766

1 - YES - You are right the Select-A-Tenna can be used beside the
AM/MW Radio for improved reception; and often doing just that works OK.

READ - AM/MW DXing = Your Radio + Lazy Susan + Select-A-Tenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1787
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1811

READ - About the 'alternative' to the common Loop Antenna
The Long "LoopStick" Antenna for AM/MW/BCB DXing
-by- Bill Bowden
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/3075
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/3100

2 - Sometimes inside and Office Building it is necessary
to run a Wire to an Out-Side Area or Window to
'import' a Signal to the Office Space {Desk} which is
the Listening Area for the Radio. The Select-A-Tenna
is then used as a AM/MW Tuner-Coupler for the
External Wire Antenna. -Example-
http://www.ccrane.com/antennas/am-antennas/select-a-tenna-model-m.aspx

READ - Using a AM/MW Loop Antenna as a Tuner-Coupler
with your GE Superadio / CCRadio+ / Grundig S350
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2272
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1150

READ - For Improved AM/MW DXing - Think Loop Antenna
as a Coupler Tuner
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2240

3 - Other times when a single AM/MW Radio Station
is the Target-of-Interest of the Radio Listener and
Interior AM/MW Radio reception is difficult. The
Select-A-Tenna can be located near a Window or
Exterior Wall and a feed-in-line {Twisted Speaker
Wire} can be used to 'import' the selected AM/MW
Radio Station's Signal into the Radio via the Radio's
AM/MW Antenna Input Terminals or Jack. -Example-
http://www.ccrane.com/antennas/am-antennas/select-a-tenna-hardwire-model.aspx

Art [N2AH],

I would agree the deeper that you get into the Core
{Interior} of a Steel Frame Office Building the more
difficult it is to get a Strong Clean Signal for all kinds
of Radio Reception. Getting a piece of Wire Out-Side
and Up-in-the-Air {On-the-Roof} is on of the better
solutions to correcting this problem and usually
easier then gettting promoted to a job with a Corner
Office Window :o)

6930. The Right Perspective - Tonight 10pm EST

Newsgroup: rec.radio.shortwave
Date: 2006-05-26 07:37:12 UTC
From: NewsGuy <NewsGuy2005@gmail.com>
Message-ID: <1148629032.881348.42210@38g2000cwa.googlegroups.com>
Source record: 76038

"The Right Perspective," with Frank from Queens and John of Staten Island, airs tonight 10pm EST over shortwave WWCR 3.215 Mhz and over the Internet at www.therightperspective.com

Dubbed "New York's Most Dangerous Callers to Talk Radio" by no other than Bill Clintion himself, Frank and John never fail to deliver explosive conservative talk radio in a style that had listeners calling into shows such as Bob Grant to ask if they had been on the air yet.

Frank delievers assailing commentary on explosive issues of the day such as illegal immigration, historical revisionism and the rise of Socialism, with brash commentary and unapologetic solutions culled from a life experience, decades of following and debating politcs, and his degrees in History. One part of their show, "Hello, Africa!," developed from a segment into a full-fledged show-within-a-show, where they shed light on the Dark Continent and have interviewed such controversial guests as Dr. Lets Pretorious, Eugene Terreblanche and Henry Pinkham.

Frank and John's unapologetic stance means you will never find them fence sitting or making nice-nice with Leftist Poverty Pimps the way Bill O'Riley does with Al Sharpton. Many of Frank's key points and phrases wind up being echoed the following weeks on such shows as Sean Hannity, Michael Savage, and even Rush Limbaugh.

Hear what the other conservative talk radio hosts will be saying next week tonight at 10pm EST at www.therightperspective.com

Since we are at the minimum of the current solar cycle, any openings on 6-meters (50-Mhz) will come from either sporadic-E or possibly auroral and meteor propagation. These modes are much harder to predict than the typical F2 propagation on 6-m, which is associated with a high solar flux at the maximum of the solar cycle. The sun is just not putting out enough energy now to sufficiciently ionize the F2 layer to support 6-m. Hopefully, F2 propagation on 6-m will return in a few years. One of the best ways to keep track of 6-m propagation is to monitor the world wide network of beacons on that band. Here's a list of them.

http://www.keele.ac.uk/depts/por/50.htm

There are also progagation groups such as the following. Click on the map menu box for 6-m USA. You can join their e-mail list to get propagation updates.

My son in law, a very fine young man, who loved my daughter with all his heart, was working at his job yesterday. He was an independent contractor and refurbished old homes for re-sale, was successful and he loved what he done for a living.

Him and my other son in law were on a joint business venture, and my son in law went to the house they were doing and found my 34 year old son in law dead from a heart attack. This young man was to me, was the son I never had. I loved this young man like he was my own. Him and my daughter were going to look at a new home to buy today, and instead my daughter, my baby girl, will be making his funeral arrangments. When I was talking to my daughter on the phone, the other line was ringing from the people who wanted his organs for donation.

My daughters life did a complete 180, from happiness to abject tradgedy.

I have seen death many times in my years, in the war, when I lost my parents and all my other relatives, but this is the most tragic.

I wanted to tell this group that I have enjoyed talking about radios, electronics and also reading some of the radio posts, but I dont think I will be around anymore. I think I have lost interest in everything.

I'm an old guy, and I only wish it had been me laying dead there instead of my son in law with such a bright future ahead for him and my little girl.

God bless you all, and thanks for the kindness you extended me here.

I get approx 27 mpg with my Subaru WRX and there's 3 of us to share the gas if I were all that uptight about the gas, which I'm not. I don't lose any sleep, I just go to bed before Jay Leno instead of after. And that's a pretty low rate for Hamvention weekend. Anyway, its only $8.88 for gas per day, which is just dirt cheap. Find a motel like Holiday (pool, hi speed access) that is closer for the $8.88. Unlikely.

As for the driving, I drove 550 miles to get there, and 550 back, so 40 is just not noticable...

An interesting link. I've heard numerous business commentators remarks that both Sirius and XM are in real trouble. Part of the problem is that they're poorly run companies, part is that people are beginning to realize that the technology is obsolete, and part is that the programming is still extremely "commercial", despite lacking commercials. Too bad, I guess. They should have known better.

OK.........

I have a Sony 2010 in my bedroom.
It sits upon an old 50's style blonde wood end table
next to my bed. I also have a Drake SW8.
It's RX is working very well with just
the wire antenna. I use it to listen to Alex Jones
and Joyce Riely (the world's angriest nurse) while
I masturbate to internet pictures of Brazilian transexual
he/she's who get off by pi--ing on each other or facesitting.

Here: http://vhs.mfxvideo.com/site/moviedetails.asp?id=1759

and here: http://vhs.mfxvideo.com/site/moviedetails.asp?id=1764

(now don't give me any of your bullshi+ dammit! This post was on
topic as I mentioned shortwave, Alex Jones and wire antennas.)

Puerto Ricans do not use "vos" at all. You are full of it.

Sounds almost akin to chop-suey (basically a slop made out of leftovers
that was concoted in an American restaurant).

Whoever came up with burritos and meat & chili, thank you! I don't
care. It's got meat, beans, and a side of rice.

How can you go wrong?????

Thanks David, now you got my mouth watering. :-D

6961. IBOC at night and the local/regiona AMs

Newsgroup: rec.radio.shortwave
Date: 2006-05-26 14:51:38 UTC
From: Stephanie Weil <stephanienyc@gmail.com>
Message-ID: <1148655098.431031.280050@i40g2000cwc.googlegroups.com>
Source record: 76069

I'm actually wondering how this is going to turn out.

Imagine two transmitters: WWRU-AM 1660 in Carlstadt, and WTTM 1680 out of Cherry Hill.

One serves the New York metro, the other serves the Trenton metro. They're currently running regular AM. In certain parts of New Jersey, the signals overlap. Both are owned by MRBI (Multicultural Radio).

I just wonder by how much their night-time range will be decreased should these co-owned stations fire up IBOC at night. Surely that's going to be some real hissy territory and there's going to be some really pissed off analog listeners.

I remember other MRBI-owned stations in the NYC metro testing out IBOC during the day - AM 1480 WZRC/New York and AM 93 WPAT/Paterson both tried it. If I recall, it didn't last long. They're back to standard analog-only AM.

http://tinyurl.com/jdchp

I just got this loop antenna in the mail a couple of days ago. I haven't tried it at the office yet, but it works well at boosting weak AM stations in the early evening.

I'm in southern Manitoba and usually listen to KFAB 1110 Omaha Nebraska at night (just for a laugh). In the winter the station usually comes in clear, but in the summer it's hit and miss. This loop antenna was able to boost a barely audible signal to a listenable level. It's probably just the same as a select a tenna or the Terk 1000 , and it works between 515 to 1920 kHz. My results with the TG-33 antenna didn't even come close.

The seller marked it as a gift, so no customs or sales tax :)

Maybe I will buy one of those Tivoli Radios.I have read some good things about them before.There just might be a store here in Jackson that does sell those radios.Didn't Mr.Kloss have something to do with designing those radios? In that case,they must be good radios.

What is really funny is when a Mexican American who has grown up in the US goes to Mexico... someplace in the hinterlands... and finds that they have no burritos and think you are asking for a cooked baby quadruped. Or the Tejano who finds that Chili is more prevalent at Wendy's (sans the side of fingers) than in Mexico.

BA recepter,is that a Tivoli Radio? I am open to ideas concerning Tivoli Radios.Might even make JT and Dave on FM 97.3 www.supertalkms.com sound good.(Paul Gallo on the radio,well,I guess there isn't just much help for him.Somebody once phoned in and told Paul he looks just like one of those Italian mobsters)

And FM 96.3 www.us963.com and that other Country Music Radio Station,FM 109.3 (they call it 103 FM.Seeee how cagey we are around here?)

When Salem bought WIND 560 from us., the turned HD off. this was because they were concerned about the loss of ulltra fringe coverage to the 540 they own in the Milwaukee market. Since the 540 lives, apparently, from preaching and teaching paid programs, every listener with a donation insures renewal of the programs, so they were protecting a (rather tenuous) revenue stream.

At some point, religious stations will find that, as HD radios (hopefully) arrive at the right price points, the texting ability will enhance the programming. Constant scrolling of the mail address or web address of the sponsor will enhance donations. Preachers can even scroll chapter and verse of Scripture! The mind boggles!

Yes he did. Was the last radio tuner he designed before he died.
Those things are sold all over the place - in any high-end hi-fi store.
And even online.

The sort of radio that audience (little old ladies on a pension) can
afford probably won't have that feature available. Some bitty little
plastic lump with a tiny display and buttons so small that they can't
be programmed by anybody over 9 years old.

Ergonomicly designed radios seem to be a high end niche.

That's an interesting point. The text data seems far more robust than
the audio; I've received 'text IDs' from AM-IBOC stations 800 miles
away, while digital audio from an 18-mile-distant station is difficult.
Maybe AM-IBOC will prove useful as a text-broadcasting scheme?

It has certainly succeeded as a QRM scheme.

> commercials. Too bad, I guess. They should have known better.

XM and Sirius are both speculative stocks. Both companies have high
startup costs launching those satellites and current operating costs so
the EPS is still negative for both.

They both need a large numbers of subscribers to be profitable. Their
subscription base keeps growing but they are not there yet. Radios
installed by the auto manufactures are their best bet for this to happen.

<http://finance.yahoo.com/q/ae?s=SIRI>

<http://finance.yahoo.com/q/ae?s=XMSR>

The last two years have had good news for both companies with auto
companies committing to putting the receivers in their cars and a lot
of press for on the air talent that was signed up but it looks like
that news has run its course and the stock price is dropping. Looks
like Sirius has been selling off since last Sept. and XM since last
Jan. I have not looked at them that closely but their subscription base
is growing and the operating costs should not be going up so at some
point they should be profitable.

If either company comes up with more positive press like more new talent
being signed up to boost subscriptions then you can expect the price to
go back up.

I'll stick with terrestrial radio and when there is nothing I want to
hear on it I put in a CD of music.

A better plan of frequencies to use IBOC on needs to be implemented
than just having stations start turning it on across the band day or
night.

I think more people are going to be pissed off about losing their long
distance reception than you think. Just because such listening does not
show up in the surveys and so has nothing to do with a stations revenue

stream does not mean that there can not be a listener lash back when the general population can't hear stations other than local ones evenings.

Because this change will affect many people and the equipment used at some point there has to be a more orderly transition of some sort. This is apparent from current night time interference complaints.

Like any new technology as the number of manufactured units goes up the price will go down.

The text ability could be a new revenue stream. Might end up being used for commercials.

Hello and thank you for reading my question!

I own a fine Icom R-70 and changed first the AM-Filter into a better
4KHz Filter.
But I had read, that there are modifications possible for getting
better sensitivity in Mediumwave and switching the AM-Filter and the
narrower SSB-Filter.

I searched a lot in the Internet, but did´nt find them.
So please be so kind and write me how to do this.

Best wishes,

Herbert, OE5BFM

How is XLNC-1 in Tijuana a "jammer station"?

Was kind of amazing. I never would have expected a classical music
station in Tee-Jay.

But then again, there is much more to Tijuana than that tourist trap on
Revolucion Ave. :)

Very sorry for the loss of your daughter's husband.

You did not mention if your daughter and son-in law had children.
Children can be a mixed blessing at times like these. You know first
hand the child's pain when loosing a parent. On the other hand
children can be the best reason in the world to go on living for the
remaining spouse.

Many people turn to their faith to lean on at times like these.

Come back when you feel up to it.

So sorry.
Bob

I am so sorry to hear of your loss. I cannot even imagine how I would feel if I lost my son, but I am sure it would hurt beyond anything I've experienced.

You and your daughter have my prayers for a relatively fast return to some sense of normal, even if the grief takes a bit longer - and hopes that someday you'll be left with loving memories and no more than a whisper of melancholy. May time heal your heart's wounds.

Peace to you ~
Bruce Jensen

Threre's a note on the DXLD Yahoo Group that 7415 is down due to a
transmitter problem and
that programming normally on that frequency
is being carried on 5110. I'm away from a radio
so I cannot verify that as I type this.

7053. Re: Kaito 1103 VS Grundig Eton YB400?

Newsgroup: rec.radio.shortwave
Date: 2006-05-27 00:46:44 UTC
From: Will <wgmartin99@yahoo.com>
Message-ID: <1148690804.899309.245100@j33g2000cwa.googlegroups.com>
Source record: 76460

I have both. The YB400 has decent sound but is
much less sensitive off the whip than the 1103.
Note that the YB400 is discontinued; I was able
to buy some more of them for about $50-$60 each
as closeouts to give as presents. That makes the
price about the same as the Degen 1103 direct
from China and a bit less than the Kaito 1103 in
the US. If physical size matters, the 1103 is much
smaller (as noted in another posting) and thus
handier, but the ergonomics (volume setting and
tuning and memory selection) are unique and
some may find them hard to get used to. The
YB400 has far fewer memories, but then I've
never filled in all the memories on my 1103. I
find it easier to recall frequencies themselves
than to recall what memory channel is what.

Audio quality is noted as being better on the
YB400 than just about any other smallish
portable; there's been a lot of discussion about
audio distortion in the 1103 on the 1103 Yahoo
group. I note some fuzziness in my 1103's
sound but it isn't enough to do anything about.

The 1103 is really good in getting weak FM stations;
the YB400 is decent, but not great. I have never
compared them on AM BCB (Medium Wave) DXing.

So I'd say: if sensitivity and picking up weak
signals is most important, get the 1103. If
listening to relatively strong signals for program
content and enjoyability is more important, go
with the YB400.

Or get both -- one can never have too many
radios! :-)

Radio Buff {SC},

Truth-in-Posting - I put an (OT) : at the start of the Subject Line
and the Subject Line clearly describes what the Thread had
evolved into :
"The Mystery of the Burrito - Unwrap the Riddle of . . ."
which was from my original post about :
"Every 50 KW Clear Channel In The USA With A Difference"

FWIW - When the Thread 'evolves' Change the Subject Line
of the Thread so that the current Topic of discussion is
understood; and that various separate strings within the
Thread can be followed independently by all Readers and
Posters of the Thread.

Especially - "IF" - The Thread goes Off-Topic and the
Focus of the Thread has change put an "(OT) :" at
the start of the Subject Line and Re-Title the Thread.

when all else fails - turn on the radio
and just listen . . . ~ RHF

I know of no station with calls XLNC, but if you refer to the classical FM
in Tijuana, it is XHLNC.

XHLNC is legally operating.

LA grandfathered Class B stations are only protected as far as the standard
B allocation, not the grandfathered additional coverage. So, since KPFK is
due no protection in SD County, XHLNC is a legitimate allocation of the SCT.
XHLNC did not "pick" the channel. The SCT allocated it, and Californula
applied and won it. It was a legal, notified allocation accepted by the FCC

Coastal ducting affects all LA stations, not just KPFK. During inversion
layer peaks, some Mt Wilson signals have been know not to place any signal
over the LA basin, while Tijuana ones come in very clearly. The FCC can not,
as yet, regulate weather.

XHLNC is an exception today, although Mexico at one time had classical
stations in nearly every larger city.

There are still 87 stations listed on the web site. Are you saying
that AAR is sloppy about removing stations from the list if they drop
the programing?

7067. IBOC - Redefining AM Radio Service As We Know It

Newsgroup: rec.radio.shortwave
Date: 2006-05-27 02:59:14 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148698754.623066.132990@u72g2000cwu.googlegroups.com>
Source record: 76474

For One and All,

IBOC - Redefining AM Radio As We Know It :

To properly implement IBOC in the AM Radio Band
both Day and Night would require that AM Radio
Station Service in the USA be reclassified as a
"Local Voice Media Service".

Reduced - The Power of all Major Market AM Radio
Stations down to 25 KW Day and 10 KW Night

Fix - Regional AM Radio Stations at 10 KW Day
and 5 KW Nights

Allow - Local AM Radio Stations to be rated at
2.5 KW Day and 1 KW Nights.

Low Power - Educational, Community and Translator
AM Radio Stations limited to 250 Watts Day and
100 Watts Night.

ok - so it's another stupid idea ~ RHF

I said, "about 70 stations" to indicate the network was still going. If it
is 87, all the more reason to call the liar who said it was dead.

> "Local Voice Media Service".

Which, for all practical purposes, it is. Night listening to AM is less than 2% of the population to start with. Night listening beyond the groundwave contour is restricted to a handful of stations as most US AMs have vastly reduced night coverage compared ot day coverage. So, there are very few listening to AM at night and very few stations capable of getting a skywave outside the local coverage area that is consistently listenable.

The FCC has considered stations to be exclusively local for nearly 5 decades.
>
> Reduced - The Power of all Major Market AM Radio
> Stations down to 25 KW Day and 10 KW Night

Wrong. In many larger cities, 50 kw is a minimu on anything but the lowest frequencies to cover the market and overcome the interference level of computers, dimmers, flourescents, and all manner of other man made interference.

Your idea neglects the fact that different parts of the AM band have different coverage for the same power: 50 kw on 1600 covers less than 1 kw on 540. And it neglects the fact that different parts of the US have vastly different ground conductivity. 500 watts in Iowa covers better than 50 kw on Long Island.
>
> Fix - Regional AM Radio Stations at 10 KW Day
> and 5 KW Nights

In LA, all but one 5 kw station (KLAC) does not cover the entire market day or night.
>
> Allow - Local AM Radio Stations to be rated at
> 2.5 KW Day and 1 KW Nights.

Not enough to cover much of anything at the high end of the dial.
>

> Low Power - Educational, Community and Translator
> AM Radio Stations limited to 250 Watts Day and
> 100 Watts Night.

100 watts today is not usable 2 miles from the transmitter in, let's say,
Florida, above 1200 on the dial.
>
> ok - so it's another stupid idea ~ RHF

Agreed.

Telamon,

The old Road Trip where you could may be travel 75 to 150 Miles
while 'listening' to the same AM Radio Station will be a thing of
the past with IBOC.

Every 35-50 Miles will require a the selection of a new AM Radio
Station and tuning in the locals as you go.

XM and Sirius Satellite Radio will be the biggest benefactors of
new Radio Listeners with IBOC on the AM Band. IBOC should
greatly benefit local AM Radio Stations and actually cut into the
Coverage Area of the old time 50KW Clear Channels due to all
the Adjacent Channel Noise that IBOC will generate across the
Band.

iboc-ing you on down the road jack ~ RHF

7075. Re: Grove's Flex-tenna

Newsgroup: rec.radio.shortwave
Date: 2006-05-27 08:25:43 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148718343.054936.114830@y43g2000cwc.googlegroups.com>
Source record: 76482

For One and All,

The Grove "Flex-Tenna" HVU Shortwave Listening
(SWL) Antenna [ANT45]
http://www.grove-ent.com/grovehvu.html
? HUV for :
H-igh Frequency (HF)
V-ery High Frequency (VHF)
U-ltra High Frequency (UHF)
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9793

WHAT THE "FLEX-TENNA" HVU ANTENNA IS :
Here is my visual inspection of the Grove Flex-Tenna
HVU Antenna appears to be a Female Threaded "F"
Connector with Two Wires connected to the connector :
* One Wire to the Center-Pin
* The 'other' Wire to the Outer Threads
* Covered by some Shrink Tubing
The Two Wires are actually a Pair of Speaker
Wires One Silver and the other Copper and the
Insulation is Clear. The Two Wires are still
Joined together as a Running Pair. The Total
Length of the Wires is 24 Feet and the 'other'
Wire is about 4-5 Feet shorter then the Longer
Center-Pin Wire. The Longer Wire has a Loop
Terminal at its far-end for Rigging - if needed.

The Flex-Tenna HVU Antenna by Grove is simple
enought to build yourself; and low cost enough to
buy 'ready-made' from Grove - Your Choice !

The use of a a Female Threaded "F" Connector
as the Wire Antenna Element's 'connector' means
that a 75 Ohm Coax Cable can be used as the
feed-in-line from the Antenna to the Radio.

The Flex-Tenna HVU is designed to be used
Indoors, Outside or In-the-Attic by Apartment
or Condo Owners or by others who can not
have an outside Shortwave Listening (SWL)
Antenna. The Flex-Tenna HVU can also easily
be used for Travel, Camping and Field Days.

Grove "Flex-Tenna" HVU Antenna Claims :
http://www.grove-ent.com/grovehvu.html
* The 24-foot Model HVU Flex-Tenna□ is a thin

and inconspicuous, Flexible-Wire Antenna.
* Designed to provide continuous 10 kHz to 2500
MHz Reception on Shortwave Receivers, Wide
Frequency Coverage Receivers and Scanners
with only one antenna connector.
* Since it's a narrow length of clear-insulated cable,
it is an excellent choice for low-visibility installations.
* Only 1/4" wide and clear-vinyl insulated for low visibility.
* The Flex-Tenna□ is conveniently rolled up for
easy transport and is an ideal monitoring antenna
for camping, motels, emergency deployment, and
fixed installations.
* Its vinyl-protected wire elements allow the Flex-Tenna
to be casually hung from a tree branch or under the
roofline outdoors, across ceiling molding, upper window
casing, doorway, or attic roof truss indoors.
* No ground or radials are required.
* An "F" Connector is provided for convenient attachment
to low-loss 75 Ohm TV type Coaxial Cable.
* For Receivers with separate Antenna Connectors for
HF and VHF/UHF, a splitter may be used effectively
with appropriate interconnect cables and connectors.

> better quality (people rave about it on Amazon and eham.net). No more
> Grundig/Eton/Tecsun in my life !

I recently purchased the eton s350 online in the UK from a trader for £69.99... The set was purchased particularly for use on the MW am band and performs very well on this band using its own internal ferrite rod antenna.

In my opinion the switchable LPF and wide/narrow am settings are a very useful bonus, particularly on the 90m and 60m bands which are impossible to resolve on other radios because of local qrm. ie: TV line base interference, Tetra, cell phones and domestic appliances.

Overall I am delighted with my purchase and hope to get many happy hours of listening from it in my retirement (age 66)

I live in a 1st floor flat (US 2nd floor) in the city of Swansea SW Wales UK.

Best 73s to all SWLs and operators from,

Ian, Swansea UK.

IBOC will be just another failed attempt to "save" AM radio. AM radio died decades ago as a viable medium.
In 1985 I was in the industry and at that time CQUAM AM Stereo was gonna save AM Radio. It didn't and IBOC won't.

In about five years we'll be listening to WIFI on our walkmans and car radio's.

Thanks for the info again and yeah so this really clinches it for me. I
want better sensitivity if that's what the 1103 provides. I don't care
about audio quality so much as I usually listen with headphones, or
through my home stereo. And with shortwave if the sound is good for
voice that's the main thing. I'm not in a position to buy both.

Well, the Tivoli Model One should have been a real flashback, modeled to look like a 2/3 scale Model 21 -- the driver is only a fraction of an inch smaller in diameter, but the Model 21 has a real acoustic suspension speaker and (gasp!) high-fidelity from *transistors!*

My point, of course, is while the Tivoli is a fine radio, it's more a modern reprise on Kloss' idea of a low-cost, high fidelity radio for anywhere in the house.

Unfortunately, I've read some rumblings about its durability -- we'll see how mine is performing in 2045.

Most listening is NOT to AM anymore. Why not accept tha tthis may be an
opportunity to make AM move viable for the future?

> Every 35-50 Miles will require a the selection of a new AM Radio

Since none of the clear channel stations (with all caps, it is a company,
not a class) really cares about covedring much else than the local metro
area and immediate fringe area, this will not affect anyone. Probably 95% of
the revenue of these, and all AMs, is generated in the daylight hours and
inside the primary groundwave contour.

I see. then why are two of the top 3 billing stations in San Francisco AM?
In fact, a quarter of the top 100 billing stations in the USA are AM.

> In 1985 I was in the industry and at that time CQUAM AM Stereo was gonna
> save AM Radio. It didn't and IBOC won't.

AM swtereo was supposed to launch in 1978. A nasty old man, Leonard Kahn,
sued to try to get his system approved, and it was 1983 before a decision
was made. By that time, AM had gone form 60% of all listening to 40%, and
there was no chance to revive it. Plus, the early C Quam was not a
particularly good system, especially in cars.

> Rush Limbaugh and ethnic saved AM.

Urban legend.

Rush did not start generating big numbers until the early 90's. What saved AM was a combination of factors....

1. Repeal of the Fairness Doctrine, allowing more agressive talk radio.
2. Several big companies, like Jacor, Clear Channel, ABC and Infinity supported news and talk on AM.
3. Most FMs, after programming deregulation in the 80's, dropped most news and content for music and entertainment. This allowed AMs to be unique in offering news and content.

By the late 70's, the big Black stations were on FM. So this sector did not help AM. And Spanish language stations started moving to FM in the very early 90's, to the point that, as an example, today there are less than 2 shares of Spanish listening on AM in LA and 27 shares on FM. Hispanics don't use AM much at all, unless ther eis no alternative.

Religious broadcasting did help make marginal AMs viable, though.

The real issue is that a huge percentage of urban located AMs do not cover the entire market. Some were licensed before the suburban growth of the US after W.W. II, and others are just bad facilites. In washington DC, there is not one station that fully covers the entire metro on AM, for example.

Interestingly the AMs with good signals have always been successful.

Just to be complete, IBOC isn't necessary to send radio text. FMers have
been able to send text in a limited form with RDS. It's kinda nifty, but
RDS text hasn't set the world on fire.

It is necessary to send on AM, though. And RDS was created to do something
which is almost unknown in the US... skip from transmitter to transmitter of
national simulcast networks.

It is 87 stations. They still feature celebrity commentators like Al
Franken and Jerry Springer, and commentator Randi Rhodes is becoming
quite the celebrity, herself, appearing on C-Span, Larry King, MSNBC
and other channels where she generally slaughters whatever right wing
meat they serve up to her.

And Bush is, what, still 29% in the polls?

Where will these new found listeners come from? I've gotten the impression
just about nobody is listening to the radio during the night.

Right, but RDS would make a good low cost starting point for an expanded FM
text service. And we'd have it, if somebody thought there was real money in
it.

You forgot American Youth, the requirement that non-whites wear distinctive patches, and the internment camps. I suppose in a pinch we could use Abu Grahib and Guantanimo Bay, so the last's covered. Of course Abu Grahib has a slight difficulty in being halfway around the world; at least Cuba's nearby. (We might have to negotiate with a certain Castro dictator first, but we're reasonably good at that; we supported the Shah and Saddam, after all, among others.)

There's the minor problem that we'd have to probably hire about 10 million cops to properly round up those citizens. Assuming a cop makes $25K/year, that's an expenditure of $250B/year. Cheaper than Iraq -- but not by much.

Sieg Heil, fellow citizens. :-) Oh...did I mention we'd all have to have a national, unforgeable identity card? (Plus at least 10 million card verifiers, some stolen, some modified? Cell phone tech might help here, though.)

Side note: there are probably simpler ways of killing illegal immigrants from undetectable bombers, than by using iron bombs. I might suggest a heavy gamma-ray source from a stable helicopter platform, similar to what news reporters use for nice, stable pictures today. This "GRASER", however, would probably be far too mysterious for the casual public -- invisible death-at-a-distance, especially at night (FLIR). However, done right, it would be *very* spooky, especially if the community doesn't understand the details about radiation poisoning ("Honey, why is my hair

falling out?").

Note that 1 kiloWatt CW gamma ray GRASER exposure for a 200 kg man = 5 sieverts per second,and that LD_50 for radiation is 4.5 sieverts). Not quite strong enough (try holding a beam on a moving target for 1 second) but maybe 10 kW will do it. A technical challenge, to be sure, and it's probably simpler just to use a high-powered sniper rifle -- except for the noise, unless the bullet's supersonic (in which case the sniper gets exactly one shot).

One might also contemplate napalm jelly, that horrible outgrowth of the Vietnam war primarily designed, AFAIK, to kill people. After all, that's the objective -- to stop one's adversary, in this case a very lightly armed, rather disorganized infantry force (if one can call it even that, though they do employ troop carriers of a sort, more commonly known as "coyotes", sometimes leaving the illegals to die in the hot Arizona sun if spooked).

Land mines might be an interesting touch, in critical areas. I'd have to study the border; there's a fair number of issues.

Nice, flashy bombs do have a psychological effect, especially if one decides to call in a news chopper with aforementioned stable helicopter platform, this time loaded with its more conventional camera unit, for live pictures of the operation, on Mexican TV.

Any of these will also probably get us roundly condemned at the next UN meeting, but we could pull a China and say "don't get all worked up into a lather about our internal affairs". (Hey, it works for China.)

America, home of the free, land of the brave. Give me your tired, your poor, your huddled masses yearning to breathe free -- we lift our bombers and kill them all.

Doesn't quite work for me but no doubt someone in Madison Avenue (or the modern equivalent thereof) can work out the nastier bugs in the above poetry; they're good at selling things, after all.

Or maybe we're just as good at deluding ourselves.

Hi:
While learning about shortwave reception and broadcasters, I also built up some knowledge of portable shortwave radios. I put some of my opinions on portable receivers together into a buying guide.

I discuss radios in 6 price ranges (in US dollars): $30-50, $50-70, $80-100, $120-150, $200-250, $500-600.

http://tinyurl.com/na5jt
or
http://tinyurl.com/na5jt

This was written in part for family and friends who might end up purchasing radios. Comments are welcome on the blogger site, and I know many of you have opinions that differ from mine. I'm happy to listen!

Actually, I am a programmer and a pretty good one. I am in favor of
anything that extends the life of AM radio or terrestrial radio in general.
The consumer, too, should be in favor of this as commercial-based radio is
free, and every other option has ongoing delivery charges.

AM underindexes FM at night. In other words, a higher percentage of night listening is to FM than in the daytime. Part of this is the night interference on most AM channels,a nd the additional interference coming from home electronics. HD at night would give AM the ability to compete better at night by those stations with decent signals, which leaves out about 75% of all AMs anyway.

In Band On Channel digital AM and FM, where a digital audio signal is transmitted on the same frequency as the analog one, receivable on a radio equipped to receive the IBOC signal. IBOC was the develpmental name. Google HD radio and iBiquity, the developer, to read more. There are aboutr 1200 HD staitons on the air already, covering most of the population of the US (nearly 80%)

Nobody wants to fight for RDS as it has no competitive advantage and is not applicable to AM. As I said, it was developed for European simulcasts to allow automatic signal seeking, which is not an issue in the USA.

So, radio text needs every potential reader to eke out a profit? 60% of the
audience would not have been enough?

That's debatable. If I recall correctly, I've heard some of the stuff you claim
to be responsible for and it sucks.

There's nothing 'free' about the IBOC QRM destroying two adjacent channels.

Well, you're partly right, and I indeed made a mistake with the date.

Yeeha! He'll be President until Jan. 20, 2009!

Is AM radio or terresterial radio really going to die? If so, how?

If you mean "die as we know it", well, that's always happening. The radio of 1966 is dead, as is the radio of 1926. Big deal. If nighttime IBOC AM somehow timecapsules the radio of 2006, it's hardly worth it.

> The consumer, too, should be in favor of this as commercial-based radio is

Most podcasting is free, unless you count the cost of the internet
connection. However, downloaders would have the internet connection anyway,
so there's no additional cost.

I can see how the internet might cut into the radio establishment's profits.

Are any car manufactures putting IBOC or HD radios in their cars?

I think you mat have already mentioned a brand but what would you
recommend for a home radio.

But FM loses most of thier listeners at night. AM underindexes that. So, at best, AM might lose only the same percentage of audience as FM.

Would the new, improved nighttime IBOC AM stations be luring listeners from other distractions such as TV and the internet, or would they just be stealing audience from the non-IBOC AM stations and FM stations?

But, if the entire radio industry is really, really facing an impending doom, redistributing the audience is little different than rearranging the deck chairs on the ...

Dear "weatherall" with no call sign:

It was good. At the University, a classmate of mine (W8BZB) had a little car because his home was in town (in those days, a student normally had to be 21 in order to be allowed to drive). He set up a 10 meter AM mobile and regularly made contacts into Europe and beyond. The tube set got its HV from a dynamotor (DC motor running a DC generator with many parts in common). His little car had a 6 VDC system. After quite some time, he noticed that the dynamotor was a 12 volt device!

Yes, propagation was great.

texting alone is not a salable benefit. I can't think of a way to make it
so. It is, however, an added benefit, especially to HD digital audio.

It is, in business terms, in full matruation and in slow decline. It will
not grwo in usership, and will only grow slightly ahead of inflation in
revenues. At some point in time, the deliver system will be obsolete, but HD
can extend that somewhat.
>

Radio will become a content driven industry, rather than a delivery system
model. Radio companies that move desirable content through new delivery
methods will survive. Others will not.

For 84 years, radio has been the same model. Get listeners, sell ads to
reach them. As long as that model is viable, radio will not be changed at
all.

Many of the more desirable podcasts are radio content, available for
listening on demand. It is just like TV wiht a TiVo.
>
> I can see how the internet might cut into the radio establishment's
> profits.

It has not so far, and probably the model that will work will be WiMax once
there is adequate bandwidth, low cost and an easy way to find content. A

radio dial is easy. A computer is less easy.

Yep, BMW starting next year is the first. Ut till a few months (11/05) ago,
there was no design spec for receivers, so that is why there are few today
ant it will grow as we now have the second version of the spec, and furhter
development is being done.
>

None. Wait 90 days for the spec. #2 receivers.

No, if AM has 30% of all radio listening in the day, it has 15% at night.

I have no idea, as we don ot know where they go. But if the big AMs get
decent daytime numbers, it is possible they will keep thse shares at night.
>
> But, if the entire radio industry is really, really facing an impending

there is no short term danger. Radio is pretty resilient. HD is one example
of how we come up with ways of protecting our franchises. I have seen 45's,
cassettes, 8-tracks, CDs, VHS, BetaMax, CATV, HDTV, Video games, pay per
view, DVDs, computers, the Internet, and plenty more come, and some go. I
think I can survive one or two more attacks before going to live among the
pine trees in Arizona.

Interestingly, the first ethnic AMs go back to the late 40's, with ones like WDIA (then self-described as "Memphis' race station") and WOV (with a remote studio en Rome) being among the early ones. As FM became viable in the very late 60's and early 70's, nobody at first thought that the ethnic audiences would be FM users... many thought Hispanics and Blacks would not listen because the radios were too expensive. Today, 5 of the top 10 LA stations are Hispanic, so I guess they saved up for the radios.

Without a survey at hand, I assume you are referring to KQED-FM, KGO,
and KCBS.

The bay area has terrible traffic. There are people who drive with KCBS
on the radio all the time. Makes no sense to me as arely does a traffic
report save my arse. The same goes for KGO, though at least they have
talk also.

Due to the terrain of the bay area, AM stations can be heard in more
places. [It's not the LA basin.] Only KFOG comes to mind with a SF and
south bay simulcast, and the number of boosters is quite small.

Most of the San Franciso FMs can't hit the south bay, but the south bay
is part of the the SF region in the Arbitron, right. Even KSFO can
reach south San Jose.

I think you should define this "2% of the population" statistic a bit.
Many people have clock radios by their beds and tune into AM at night.
Ever hear of "Coast to Coast AM?".

People tune for content first, then comes quality. I hear HD isn't as
good as XM, which makes is not as good as standardm FM.

Improving the signal to noise ratio or bandwidth of Gene Scott or
Brother Stair would not make me listen.

David Eduardo doesn't want to hear about anything or anyone that doesn't fit into his little world of Arbitron ratings and IBOC hash generators.. he doesn't realize that 2% of the population is still 4,000,000 people and that we have buying power, too. Glad you guys think you can throw away 4,000,000 customers nationwide.

Back in the late 70's we were part of the Ford automotive group that used to visit the Betheny Relay Station just north of Cincinati. we would use the R.F. sources of that site to measure abusve effecs of R.F. radiation on or current production automobiles. We had loads of fun there. The station manger and staff always treated us top flight.

7166. Interesting Forty Metre (40m) Broadband Discone Antenna Design - What Do You See ?

Newsgroup: rec.radio.shortwave
Date: 2006-05-28 01:50:29 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1148781029.575227.60830@g10g2000cwb.googlegroups.com>
Source record: 76324

For One and All,

Forty Metre (40m) Broadband Discone Antenna Design
Question - What Do You See ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9811

Here is an Interesting Shortwave {Amateur-Ham}
High Frequency Antenna design from the UK
Forty Metre (40m) Broadband Discone Antenna
-by- Britanicca
http://cgi.ebay.com/_W0QQitemZ9730520918
Bands : 40m (+ 30, 20, 17, 15, 10m with an ATU).
Impedance : 50 Ohms
The Text and Pictures are worth a read and look see.

This Broadband Discone Antenna looks to be
easily 'scalable' for Shortwave Listening (SWL)
Antenna use for :
60m = 47.7 Feet Arms = 95.4 Feet Tip-to-Tip
- - - At least 34 Feet Mounting Height
49m = 38.5 Feet Arms = 77 Feet Tip-to-Tip
- - - At least 25 Feet Mounting Height
41m = 31.8 Feet Arms = 63.6 Feet Tip-to-Tip
- - - At least 23 Feet Mounting Height
31m = 24.5 Feet Arms = 49 Feet Tip-to-Tip
- - - At least 18 Feet Mounting Height

IS IT REALY A DISCONE ? DESIGN ?
Some may view 'this' Broadband Discone Antenna
design as a "Discone" -and- others may simply see
it as Twin [Flat & Sloping] Dipole Antenna cut for
the same Band -and- still others will see it as a
Combination of a Dipole Antenna and Inverted "V"
Antenna that are cut for the same Band.
? ? ? What Do You See ? ? ?

just something to look at and wonder - iane ~ RHF

But, judging by the sensitivity of 1 MW > 1Mv/M, you'd have to be struck
by lightning just to hear static. Perhaps they meant 1mV ?

JHR,

Questions about the Grove "Flex-Tenna" HVU
Shortwave Listening (SWL) Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9810
RHF -- Do I get this right ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9794

At one end is an "F" Connector with about an Inch
of Shrink Tubing to cover the Wire connections to
the "F" Connector and then the Speaker Wire runs
by itself {Un-Covered} to the far-end.

The Wire itself is Clear Insulation Speaker Wire
(Pair of Parallel Wires). One Wire Silver Colored
and the other Wire Copper Colored. Both Wires are
Insulated and naturally from each other.

The Shorter is about 19-20 Feet long and the Longer
is 24 Feet long.

Together they are designed to be the Wire Antenna
Elements to be connected to a piece of 75 Ohm Coax
Cable as the feed-in-line.

THE BOTTOM LINE :
The Grove "Flex-Tenna" HVU Shortwave Listening (SWL) Antenna
http://www.grove-ent.com/grovehvu.html
Simple enough to build-it-yourself to play around with
and low cost enough to simply buy-it-and-try-it.

that's it that's all - iane ~ RHF

As FM became viable in the very
> late 60's and early 70's, ...

By viable do you mean profitable ?

We had a tube EICO FM tuner and multiplex adapter in my family home since
about 1963.
Not only was the sound great compared to AM but I liked the programming alot
better than NYC metro area AM of the early 60's. .

> So there is no loss if there is nobody there anyway.
>>

Hi,
I'm nobody. Glad to meet you.
Meet my two other pals, that are also nobodies.

I wouldn't be stretching to reach out to listen to non local channels except
I'm tired of the local lights out, satellite fed national programming
without a heart and soul.

Making a signal sound good is only step one. Now I hope they fix step two.
(never happen, costs too much to have humans do anything)

What I find is hard to believe is that some in your 2% of the population think that any advertiser will target your 2% rather than the other 98%. Sure, for some niche demographics that might be appropriate, but for the majority of advertisers using broadcast media, 2% is insignificant and not worth targeting.

Radio stations get paid by the advertisers, not the listeners. The advertiser try to cover the most people for the fewest dollars.

When I was buying radio time, I would have never considered buying time on a radio station 100 miles away. Those stations did not serve our market, even though they could be heard in our area.

As a consumer, why would I drive 100 miles to get something that I could get locally? Any ad I would hear on a station 100 or 200 miles away would meaningless to the advertiser because I would never visit their business.

When it comes to the relationship between radio and advertisers I agree with David Eduardo.

Just because a number (4,000,000) has 6 zeroes in it doesn't make it any more significant. You are still talking about 2% of the market. Besides those people are not in a single market. How many of those 4,000,000 people are actually listening to any specific station outside of its local market? 100? 200? What is it that would make them more important to the advertiser than the tens of thousands that may be listenting in the local market?

No mandate. that was the whole idea of IN BAND ON CHANNEL... it is like FM
stereo, and backwards compatible.
>
> When ? - If Ever ? -Is Analog FM Radio mandated
> to go away - Year ?

Same

>
> -OR- Are AM and FM Radio Stations required to
> 'always' Broadcast in both Analog and IBOC ?

There is no requirement to broadcast in HD. Many stations will not. time
will tell who is right. Since it is compatible, I see no reason not to.

> and KCBS.

KQED is not AM, and it does not bill ad revenues (they are non-com). KGO, KCBS and KNBR are top 10 billers (in fact, they ARE the top 3), and KSFO is very close to being top 10.

> The bay area has terrible traffic. There are people who drive with KCBS

In car listening is only 30% of all radio listening in the market.

> Due to the terrain of the bay area, AM stations can be heard in more
> places. [It's not the LA basin.] Only KFOG comes to mind with a SF and
> south bay simulcast, and the number of boosters is quite small.

SF is a better than average AM market, but so is Chicago... WSCR, WLS, WGN and WBBM are all top 10 billers. No hills, either. It is about being big signal stations, not about AM vs. FM.
>
> Most of the San Franciso FMs can't hit the south bay, but the south bay

>
> I think you should define this "2% of the population" statistic a bit.
> Many people have clock radios by their beds and tune into AM at night.
> Ever hear of "Coast to Coast AM?".

Coast to coast gets a big share of nothing. In overnights, less than 1% of
the population is listening to the radio, and they get, in most markets,
about 10% or less of that.

AM at night gets around a 2 rating. Radio overall about a 7 (7 to Midnight)
A rating point is 1% of the universe. In overnights, the rating is below a 2
for all radio, and below a 0.3 rating for AM.

The quality of HD on FM is higher than CDs. On AM, it is slightly less. On XM, it is like a 128 kbs MP3. You choose. To me, satellite sounds the worst of all.
>
> Improving the signal to noise ratio or bandwidth of Gene Scott or
> Brother Stair would not make me listen.

It is about the fidelity, and openness on AM. It is close to current FM analog quality.

> that we have buying power, too.

You have mis-read. Again. 2% (a 2 rating) is the percent of all 12+ persons
who use AM radio at night. Most of radio night listening (over 80%) is to FM
stations, and nearly 100% of the night (7 to Midnight) AM listening is
inside the city grade groundwave contour of a local station.

> Glad you guys think you can throw away 4,000,000 customers nationwide.

Oh, but these are people we DO have. They listen to AM at night, and to their local stations. Again, there is a barely detectable number of listeners to AM stations outside the local market in the evening.

You got that figure from me. 2% of the population 12+ (of about 220
million) is the number of people who listen to AM at night (7 to midnight is
night), and they do listen, but to local stations. There is no discernable
listening to skywave out of market signals at night.

That is what "viable" in a business means. Very, very few FMs made money
from the first ones pre-W.W. II through the very late 60's. In fact, from
1950 to 1960, total FM count declined by nearly a third.

Yes. The model is free for listener, paid by advertiser. There are nearly a billion analog radios out there, so there is no effective way to do pay radio, and the entire licensing system would have to change, something I doubt the FCC and the folks on the Hill would stand for.

Since it only affects Am significantly, and does not affect AMs with good
signals, we are talking about very few stations that are otherwise viable
being affected. he real issue is that most AMs in the US do not serve
today's metro areas, and in more rural areas, most AMs were killed already
by docket 80-90 drop ins.

I'm not clear on what I'm wrong about. Doesn't FM also lose most of their
listeners, in absolute numbers (not percentage) during the night? What are
those numbers?

You don't know where the listeners are going when they aren't listening to
the radio? It sounds like the industry has no idea what it's competing
against. Yet they seem to think IBOC is going to fix -- ahhhhhhh --
something.

I think their main studio is in Cardiff but there are transmitters
located all over Wales because of the terrain which is very hilly
(mountains to us LOL)
Radio Cymru is the welsh speaking broadcast, Radio Wales is in English
because Wales is a bi-lingual country
Radio Wales can be found on the MW band at 882khz. It's a very good
signal which I've heard from various locations around the UK during the
hours of darkness.

Thanks for the interest. Ian Swansea UK

Hi everyone:
Thanks for checking it out! Good point about the 1105. I like the layout of that radio. I wasn't sure how to classify the Chinese-only radios in terms of price, because the shipping costs are high and can definitely impact the purchasing decision. The 1105 seems to belong in the $50-70 price range and description though. I will update the article and credit you for mentioning it.

As I understand, the FCC already allows SCA channels to be subscription.
I'm sure the FCC allowed some TV channels to go subscription about 25 years
ago.

The government has already allowed pay broadcasting.

Seems like the benefits of texting would be the same regardless of the
method of audio modulation.

I take it that electromagnatic interference from home electronics isn't
significantly reducing the radio audience even though they are listening to
analog radios.

Text is more easily implemented, without potential artifact, with
more possible versatility in digital modulation, than as an analog adjunct.

That sounds about right... seems to me that about 1981 KECH Ch. 22 in Salem started running subscription scrambled service OnTV. I think the experiment failed in something less than a year, leaving a lot of decoder boxes flooding the market who's only purpose was to receive one UHF channel and place it down on Ch. 3.

It can also be used for other applications.

In Brussels, there is a service where all signs on the busstops are
dynamically updated based on the real possition of the busses. The
information broadcasted by the central server of the bus-company to
update the signed is done in a RDS channel of a FM station.

Another applications are DGPS and TMC (real-time road traffic
information) which are broadcasted over FM/RDS.

BTW. There is now also a AM-version of RDS: AMSS.
See here: http://www.ebu.ch/en/technical/trev/trev_305-murphy.pdf

It's already in use by the BBC WS (on 648 Khz on MW and on SW) and by
RTL (234 Khz LW).
There are not a lot of receivers which use it, but the new FM/AM/DAB/DRM
receiver of Roberts does.
http://www.drmrx.org/forum/showthread.php?t=1411

These kind of systems have been in use for quite a long time now.
The LW-transmittor of France Inter (162 Khz) is used to broadcast
time-signals (actually the same format at the DCF77 transmittor in
Germany but with a different modulation-sceme).
The BBC radio4 transmittor at 198 Khz is used to control (IIRC) day- and
night-tariff for electricity.

Cheerio! Kr. Bonne.

OK, I see the point. RDS has the same problems as SCA as far as FM goes.
But, as I understand, there's some unused overhead in RDS such as font
selection and such which could be better used in an text service.

And the problem with digital modulation can't be all that different. The
bits used for text are bits which can't be used for audio.

Yes, it's the clandestine Radio Nile on 9905 and also said to be using 12060
0400-0500 Saturday-Tuesday. Uses transmitters in Madagasar.

Their website says that they use 153220 and 12060.

http://www.sudanmirror.com/archives/vol_2_issue17/regionalnews/radio.asp

If you need an address see:

http://www.bdxc.org.uk/ and look at the Africa List under articles then look
under the listings for Sudan.

The 2007 editions of PASSPORT TO WORLD BAND RADIO and WORLD RADIO TV HANDBOOK are now listed for pre-order from Amazon.com.

Their current prices are $14.92 and $18.87 respectively.

If you are interested in these books, I recommend placing them in your "Wish List" and ordering them when a publication/shipping date becomes firm. I should expect that PASSPORT will be issued in October and WRTH in December or January.

I personally buy both of them every year.

Best,

Joe

We don't even know if we are going to be useing towers and transmitters 10
or 15 years from now. technology is moving radpidly enough to consider that
the current bands and distruibution systems will become obsolete, while
content may be moved on other carriers. However, we weredall told that the
Internet and streaming would kill radio back in the late 90's, and that
never happened.

Nobody has any basis for making a prediction as the device that will move us
from towers and transmitters probbly does not exist yet
>
> Sure. It's easy to imagine Pandora like programs autoloading

There is no system with adequate bandwidth to satisfy the needs of a quarter
billion people at present. There is also no system that can do it free, like
radio is today. The major impediment to satellite and other systems is the
cost of delivery on an ongoing basis.

The difference is that FM actually increases share of available listeners at night, while AM decreases. All radio has different listening levels at differnt times. From 6 Am to 7 PM, it is around 22%, while at night it is more like 7%... keeping in mind that 7 PM is "daytime level" and 11 PM most people are asleep and it is around 3% of the universe.

Whaterver the listening level, FM takes more of it at night.

Syndicated radio research is almost totally about what people do while listening to the radio. The cost of tracking what else they do would be enormous. We are rolling out the portable people meter, which measures radio, TV, cable, satellite, storecasts, etc. all together with one device... and it will cost 66% more than the current costly research. A small broadcaster that pays $7 million a year will now pay nearly $12 million.

Yet even this can not tell us when someone went to an iPod or whatever. Radio measurement is intended to help sell advertising, by quantifying listeners. There are studies that show leisured time activities, but not in a tracking of moment to moment usage. The cost would be more than radio makes.

HD is highly researched. But no new product, without trial, can be well research as consumers can not visualize the unknown until it is totally tangible. HD still is not on anything but top market stations,a nd the HD 2 rollout is just starting. we know more progressive consumers think analog is stale and that anything digital is better. We also know that HD 2 doubles the programming choices, which is good. But radio is part creativity, and

that can not be measured, any more than TV can measure which shows will be hits or record companies which songs (less than 5% of music releases make money)

But SCA was always designed for narrowcasting, such as stock quotes,
telemetry, and such. HD has not been approved for a subscription model, and
the receiver specs are open access.
>
> The government has already allowed pay broadcasting.

Radio's main defense is being free and ad supported. The relative lack of
success of satellite (many think it will not make money before another
technology supersedes it) is certainly enough to keep us away from that.

In fact, the current authorization is for simulcasting of the analog
content. the only new content is on FM, with the second (and maybe third,
fourth) channels... like HDTV, which is not pay either.

FD,

DE - So Tell Us All - What Are : "Docket 80-90 Drop-Ins"

All I have found so far is :

The Docket 80-90 "Drop-Ins" (new FM stations) were, by definition,
Local Stations that mostly served "Targeted" Community Needs.

I.E. - Broadcasting in Languages 'other' than English to underserved
Groups within a Community (City/Town/Region/State).

FWIW - May also apply to underserved "Religious" Groups within a
Community (City/Town/Region/State).

Docket 80-90 was supposed to be a chance to open Radio Station
Ownership to many new players; turned into a chance for existing
Owners to buy-out-competition and Grow from 1 AM/1 FM to up to
Eight Radio Stations in a Broadcast Area "Media Market".

i want to know ~ RHF

RDS is nowhere nearly as robust as HD for texting. It is pretty slow, and
scrolls, rather than sending entire screens of data at once.

> ins" is.

Late 90's, following the Bonita Springs case (station lost its license when it applied to upgrade, as it opened up, then, competitive bidding) the FCC added over a thousand new FMs and allowed Class A's to become B's or C's, and allowed routine major changes, including changes in city of license. End result... Traverse City, MI, market, with one time 2 AMs, now has about 15 stations city grading a county of 40,000. Lake City, FL. 3 AMs and two FMs grew to 7 FMs, and nobody makes money... the AMs are useless now, as the local ground coverage is so poor that the FMs took it all.

In most of this type of market, there is nearly no AM listening, and the coverage of the local small market AMs is so vastly inferior to the many new local FMs as to also discourage listening. There are very few decent overage AMs in America.

> to
> analog radios.

This one has been proven. A look at ratings from the 70's and even 80's show listening ZIP codes to include significant listening in those in the 5 mv/m to 10 mv/m range. Today, in most large cities, the listening is almost entirely in the 10/mvm or better... in LA, it is mostly in the 15 mv/m, for example. The difference is not new stations, as most larger markets have had no new stations in that period, but the difficulty in listening... and listener expectations of better signals and less noise.

Eduardo is my second given name, like Mary Jo, Jean Paul or Billy Bob. David Eduardo. Eduardo is a given name, not a surname.

If you are Steve, I am David Eduardo. And that is followed by my paternal and maternal surnames, just as on my passport, driver license and even Cedula de Identidad from Ecuador.

I wouldn't drive 100 miles for something I could get locally.
I might visit that businesses internet site and purchase their product online, especially if it was cheaper or the local guy pissed me off during a previous transaction. I did drive 100 miles round trip to buy a new car last April.

What is killing traditional AM and FM broadcasting ?
Simple.
Too much of the programming sucks.
Variety and local interest news has been replaced by redundant, boring, repetitive satellite fed crap.
Fix the programming and you fix the demise of AM and FM .
What part of that doesn't the industry "get" ?
Do I need to be saved by the same Rev. Ike, running the same programming on 4 different low end of the band translator FM channels all at the same time, all satellite fed from California ?
Do I need my colon cleaned ? Seems to be a popular item on 1160 AM out of Oakland NJ ? I do like their swing music between colon cleanings.

Do I need to be told daily by the local Democratic party head who also has a program on the local station 20 miles south how popular Hillary Clinton is and God will love me if I vote for her, and I should vote for her because she is pretty ? Don't make me puke.

This is the kind of stuff that is killing radio. It will kill it with noise and static crashes and on noiseless HD and cable feeds. Should I blame the advertisers who pay for this tripe ?

> Too much of the programming sucks.

Then why do 94% of Americans still use it? That is down 1% since 1965.

> Variety and local interest news has been replaced by redundant, boring,
> repetitive satellite fed crap.

There is more variety of music formats now than at any time in the history
of radio. There are also liberal and conservative talkers, sports taslk 24/7
and plenty of ethnic choices, too.

Fewer stations are using syndicated music formats today than in the 70% (as
a percentage). Talk and entertainment tends to be mostly syndicated as the
good talent can not afford to be on one station, unless in the top 5 to 10
markets.

> Fix the programming and you fix the demise of AM and FM .

It is as good as or better than ever. It is just that we have so many other
choices to compare it with, and sometimes we opt for them instead. If I live
in Minneapolis and like reggae, I get satellite.

> What part of that doesn't the industry "get" ?

We get that commercial radio is "broad"-casting and we can not overly niche
ourselves, like doing reggae in Minneapolis. On the other hand, in the 18-54
age spread, radio is quite healthy and holding up surprisingly well for an
89 year old medium.

> Do I need to be saved by the same Rev. Ike, running the same programming
> on 4 different low end of the band translator FM channels all at the same
> time, all satellite fed from California ?

You are introducing translators, and non-commercial ones to boot. They fit in the gaps between "real" staitons and, given the choices of other signals, can be ignored if you do not like them. Actually, K-Love and Air One are not "Rev. Ike" but contempor<ry Christian AC and Rock formats and incredibly well done if you are in the target. Obviously, you are not.

I am not in the target for Van Halen or Cranberries or Deep Purple or Whitesnake. I hate that music. But I simply pass it buy as if it did not exist. Where I live, that still leaves about 85 other stations to pick from.

> Do I need my colon cleaned ? Seems to be a popular item on 1160 AM out of
> Oakland NJ ? I do like their swing music between colon cleanings.

Again, you are seeking to deny the fans of standards thier dose of music because you want something different. What, specifically, is lacking for you? You are indicting a whole industry because your favorite blend of music is not available to you for free.
>
> Do I need to be told daily by the local Democratic party head who also has
> a program on the local station 20 miles south how popular Hillary Clinton
> is and God will love me if I vote for her, and I should vote for her
> because she is pretty ? Don't make me puke.

Opinion again.

And a non-sequitur of major proportions. Above you said there was nothing local. Now you say there is, but it is not the kind of local you want. So it is not about localism or diversity of formats. It is about statins that play lots of different formats, are local, and which you don't like. It is all about YOU in the end.
>
> This is the kind of stuff that is killing radio. It will kill it with
> noise and static crashes and on noiseless HD and cable feeds. Should I
> blame the advertisers who pay for this tripe ?

Advertisers use a simple metric for buying: how many listeners are there and how much will I pay per thousand listeners. If there are no listeners, you do not buy. If there are many, you pay in proportion to the number.

Damn. Those Hattiesburg schools sure teach strange capitalization rules. It must be the Confederate way of spelling "squeal." And you should crosspost like a man, instead of a webtv.net castrati whose little box won't let him do it on account of he's ascared to buy something he don't know how to figger out.

Well, maybe that ham Mark won't go to Petal, Mississippi, but now that I've been insulted by some yahoo, I just may go there and get myself some hummers from the ladies at the Fast Trac gas station. If I do, I'll be laughing my ass off at you the whole time 'cause all you got is that damn mangy dog next door.

I assume you have proof of better than CD sound quality. So you are
saying HD FM is PCM? If not, please retract your statement.

I really have no problem with digital radio schemes, but can't tolerate
anything that screws up the current analog system.

Of course, don't let it bother your that Steve is simply unhappy that 95% of the folks are being served nicely and for free, while he is waiting for some station to serve him personally (although he does not say what is lacking... he just strikes out at other formats)

Never mind that there are more different formats in every market than there ever were. He says the opposite.
Never mind that less radio is automated or syndicated than 20 or 30 years ago.
Never mind that the model for TV is national... yet Steve wants bad local radio over the best talent America can offer done nationally.
Never mind that Steve says there is no local content. What he means is that there is content he does not agree with, so it is all bad.

And if you have not watched "old" DVDs on a DTV monitor, you have no idea what you are missing. Even analog cable looks stunning, and the amount of HDTV production is increasing rapidly. I've bought 3 HDTV monitors already, and will eventually replace all of the old ones with HDTV.

Brenda, you are sounding like a Luddite.

It is higher quality than analog FM, which is limited in badwith. It is capable of being "better than CD" quality if only one digital stream is used on FM. The problem is that there is no material, other than live, to broadcast that way, so most staitons are doing two HD FM channels.

Also, keep in mind most CDs do not sound very good, as the original recording was significantly compressed and distorted before the pressing.
>
> I really have no problem with digital radio schemes, but can't tolerate

FM HD does not affect the quality of the analog signal. It may, in some cases, cause the inability to hear ultra fringe stations from other markets. But there is essentially no listening to such stations in such areas, so there is no loss if nothing existed before.

AM analog has to be backed off to a 5 kHz to 7 kHz upper limit, but since most analog radios don't go that far even, there is no loss and actually the more limited bandwidth sounds better on many of today's radios. It certainly sounds no worse.

In San Francisco, the AM stations have a 24 share nof in car listening 6 AM
to Midnight. In Morning drive, they have a 25.4% share of all persons
listening to the radio in the car. So SF is actually below the national
average of a 30% share. LA is 31%, NY with lots of public transportaiton,
has a 25% share.

MOST.. not ALL. How many millions of GE Superadio III's are out there that will no longer be able to take advantage of the wide AM setting? And these are still in production, not 40+ year old tube radios with dual bandwidths. AM IBOC destroys the usability of those radios on the wide setting. You keep talking about no loss, nobody's listening, nobody matters. Take your IBOC shilling somewhere else. I don't see where most of us here want to hear about it. Take it to rec.radio.broadcasting if you are even still welcome there. I know at least one person who has met you in r/l and says you're just as much a pompous ass in r/l as you are here. I get so sick of being marginalized by the likes of you. You ARE affecting people with this crap, we are not NOBODY.

Have you ever actually talked to this 95% you claim is being served
'nicely'? It's been my life experience that most people think the current
fare available on radio sucks pustulating green donkey penises. You think
they like it because it's what you feed them and they have no choice but to
listen to that garbage or nothing at all. Your numbers are self-serving, not
public serving. I remember when radio was a public domain for the public
good, not strictly some big corporation's bottom line.

Some of us don't want pre-packaged satellite fed crap from
hundreds-thousands of miles away. We want our LOCAL airwaves back.
Something that matters to us as a community, not BigJockJohn out of Boulder,
CO spewing out our local radio stations.

> Never mind that Steve says there is no local content. What he means is

I've seen what NTSC material looks like on a HD set.. and it looks like crap. It's pixellated. It's unwatchable. For the longest time I thought I wanted a plasma set, but after seeing what available content looks like on one, no thanks.. besides, they draw about 8x more power than a CRT set, and we're already paying way too much for electricity. And LCD sets are even worse (not power wise, but the quality of the picture). And before you start talking about how I've only seen one or two sets, we have at least 15 models at our PX, and compared to an analog CRT, they all look like crap.

> Brenda, you are sounding like a Luddite.

That's quite an exaggeration. Just because I don't want to advance BACKWARD, I'm a Luddite (and besides that, what's wrong with Luddites? They'll likely outlive all the lazy couch potatoes who spend all their time in front of a television or computer (which includes me)). Causing interference to any listener should be unacceptable to any broadcast engineer worth his or her salt (and from all the engineers I have talked to, most do feel that way, and do not like IBOC). And I don't like being forced to 'upgrade' to DTV when it obsoletes the 5 brand new televisions I have in my home. And converter boxes, no matter how much you try to say so, do not produce a picture as good as NTSC analog.

David, people are sick and tired of radio for money's sake. I dream of engaging and interesting programming. In other words, programming to say something, make real art, or an original point of view without focus groups, or polling data. Do that and the advertisers will start a bidding war to get a spot on your station.

The most insipid example I can give you of "giving the people what they want" is the American Idol show. Don't get me wrong, these artists are talented. But they're highly unoriginal. In other words, they're "safe".

Would Louis Armstrong have a chance in today's radio market? Would Bix Beiderbeck? How about Jimi Hendrix? Pete Seeger? George Gershwin? I have to wonder. Many artists believe that they have hit the big time despite the recording and broadcast industry, not because of it.

The problem is one I've outlined years ago. It's basically a version of the Heisenberg uncertainty principle applied to marketing. When the measuring technique affects the thing you measure, you really don't know what you have. Using polling data and focus groups to determine your music programming is a self fulfilling process that will guarantee mediocrity.

As for whether IBOC is a good or a bad thing, I'll say this: AM could sound good. However, nobody sees fit to purchase a quality receiver to listen to a better sound. Thus it has been relegated to a secondary status. And so you can walk away making the point that gosh, the noise from IBOC doesn't make things that much worse because it already sounds like crap to most people.

Broadcast AM wouldn't sound like crap if the programming was there to support the demand for fidelity. It wouldn't sound like crap if people actually complained about the crummy audio at night from all those lower power stations. They don't complain, because station owners pay program directors to generate bland mediocrity that will sell commercials, not inspire and engage listeners. Nobody cares because there is nothing to care about.

Having vented my spleen, let me say this to all you folk who think that nothing can sound better than AM: Get over it. The biggest problem with MW and SW AM broadcasting is that we don't have a capture effect of any sort. AM can not have such an effect. But digital modes can clean up the act considerably. Sorry, Telemon, some bright folks on a few industry committees will find a reasonable suite of digital standards some day, and when they do, AM will go the way of morse code. It can't happen soon enough in my not so humble opinion. You will never convince me that digital artifacts are worse than heterodyne whistles and opposite sideband artifacts from a station 10 kHz away.

However, even if such digital standards take hold, nobody will give a damn as long as the programming sucks. Is it any wonder that both XM and Sirius are still having difficulties making a profit? Think about it...

Here's a slightly different take on the topic of high performance MW reception... The smaller the radio, the smaller its ferrite bar antenna will have to be - so, for a given size category, the high performers will be the radios with low noise, high gain, well designed circuitry. There are probably a number of very good performers out there; by posing the question in this way, maybe we can highlight the radios with well designed circuitry at a variety of different size ranges. (For example, the Degen 1103 might rate well by this metric since it's both sensitive and compact.) Even the Sangean SR-1 might rate well just because it works (and is VERY compact).
Any nominations?
Thanks in advance,
Stephen

It's just a hammer with a large head. The term 'lump hammer' is more of an English term used in the UK.

Think of something like a 'sledge hammer'.

>> AM analog has to be backed off to a 5 kHz to 7 kHz upper limit, but since
>> most analog radios don't go that far even, there is no loss and actually
>> the more limited bandwidth sounds better on many of today's radios. It
>> certainly sounds no worse.
>
> MOST.. not ALL. How many millions of GE Superadio III's are out there that
> will no longer be able to take advantage of the wide AM setting?

Given the CEA estimate of the lifespan of such devices, probalby less than
100 thousand are in operation. Less than 400,000 were sold int otal. I have
been through 4 of them, and none are among the living today.

> And these are still in production, not 40+ year old tube radios with dual
> bandwidths.

They are a specialty device, of not much appeal to most listeners as they
are not stereo. And, as I said, all the models have sold well under a
half-million.

> AM IBOC destroys the usability of those radios on the wide setting.

No, it does not. It just does not sound any better on wide than regular,
because the analgo is limited to 5 to 7 kHz. Considering that there are 1
billion radios in the Us, a few tens of thousands of hi-fi AM radios is
rather insignificant. Since NRSC has limited AM bandwidth to 10 kHz anyway,
the net loss is trifling.

> You keep talking about no loss, nobody's listening, nobody matters.

The fact is that there is very little daytime listening to AM outside the
city grade contours. There is essentially no measurable night listening
except to a handful of clear channel staitons, mostly the old 1 Am and a few
1 B channels. On the other hand, radio faces major challenges, but AM and
FM. If a tiny amount of present-day fringe listening is lost to give radio a
longer life span, that is a tiny price to pay.

You are defending a "today" that is ending. If you want there to be free
radio tomorrow, some chnages have to happen.

> Take your IBOC shilling somewhere else. I don't see where most of us here
> want to hear about it.

I am trying to explain why htings must change if there is to be any kind of free radio in the future... AM, FM, SW of any kind. If you want media all controlled by Rupert Murdeoch and a few major companies that are world-wide, then stick to your guns. You will be part of the death of free radio.

> Take it to rec.radio.broadcasting if you are even still welcome there. I
> know at least one person who has met you in r/l and says you're just as

> had more money, better cars and greater needs for fast delivery of goods.
> Route 66 is analog. HD is digital radio.

>You ARE affecting people with this crap, we are not NOBODY.

Sorry, but you are. You are standing nearly alone with a dwindling bunch of AM DXers who want the world to spin backwards. If you care about radio surviving, and, more than that, if you care about the 120,000 employees of US radio stations, you would be more wise to look at what can make the medium viable further into the future.

> Have you ever actually talked to this 95% you claim is being served
> 'nicely'?

Actually, I do. One of the functions I am responsible for is a 50 person research staff that talks in person or by phone with over 300, 000 listeners a year. We know, and there is really not a great deal of discontent among the people who account for about 95% of all radio listening (about 85% of the poulation, which has always been the case). Most don't even think musc about it, as radio is simply part of their lives.

> It's been my life experience that most people think the current fare
> available on radio sucks pustulating green donkey penises.

Most people do not even think of it at all. It is free. And it satisfies a need. At one extreme, there are very passionate listeners, and at the other extreme, very passivle ones who use radio while working or doing other things. But there is no groundswell of dissatisfaction except on groups like this, which are atypical.

> You think they like it because it's what you feed them and they have no
> choice but to listen to that garbage or nothing at all.

When one smaller company spends $4 million a year to ask listeners what they want and then thens of millions more to provide it, all I can say is that you are wrong and are, apparently not involved in the way radio works today.

>Your numbers are self-serving, not public serving. I remember when radio
>was a public domain for the public good, not strictly some big
>corporation's bottom line.

I see no difference from when I started in radio, 47 years ago. Radio has laways, save the first few experimental years prior to 1920, had a model of selling something... first radios themselves... and made a point of giving listeners what they wanted. The FCC saw fit, especially int he psst-war years, of trying to tell radio what the public wanted. After several long decades, they recanted and let the market determine this. Today, anything that a large group of listeners want is provided. What they do not want, like the old Sunday morning public affairs ghetto, is gone. Or the music stations being forced to carry news. Or having quotas on what is "good for listneers." Today, listener needs are filled because all significant staitons research what listenrs want, constantly and expensively.
>
>> Never mind that there are more different formats in every market than

>> Never mind that the model for TV is national... yet Steve wants bad local
>> radio over the best talent America can offer done nationally.
>
> Some of us don't want pre-packaged satellite fed crap from
> hundreds-thousands of miles away.

There are two factors. Most local markets can not afford star talent. All the stations in Palm Springs, CA, bill less in a year than a single low rated LA station does alone ($12 million... the top LA station bills around $60 million) so you will not find much in Palm Springs. that is because anyonee good gets hired to the next tier, and so on. So in most markets, they do some local, and mostly syndicated talent for talk and sports formats. they can neither afford nor keep good talent. That has ALWAYS been so.

Remember, radio began as a 100% network proposition. Local programming was practically unknown except in 5 or 6 big cities until the mid-50's.

Of course, the network feeds were by phine, with about 100 repeater coils in the path between the studio and the listener. Now that was hi-fi.

> We want our LOCAL airwaves back.

You really never had them.

> Something that matters to us as a community, not BigJockJohn out of
> Boulder, CO spewing out our local radio stations.

Most music stations are local. Very few are networked, except in very small markets that can not afford to be live... especially after DSocket 80-90.
>
> I've seen what NTSC material looks like on a HD set.. and it looks like

> wanted a plasma set, but after seeing what available content looks like on

> one, no thanks.. besides, they draw about 8x more power than a CRT set,
> and we're already paying way too much for electricity.

Huh? My 42 incher draws far less power (LCD) than the 28 " CRT it replaced, and produces no heat to increase the AC bill. And it looks devine. I only see pixellation once in a blue moon, so I have no major objections to it. And when you use Dish or Directv, it is just stunning, including the local channels.

> And LCD sets are even worse (not power wise, but the quality of the
> picture).

I have an LCD, a plasma and a TI chipset projection set, all HDTV. The quality of the pictures on each is not readily distinguishable, once you have set each to your preferences and the ambient light in each room.

> And before you start talking about how I've only seen one or two sets, we
> have at least 15 models at our PX, and compared to an analog CRT, they all
> look like crap.

Just about everyone I know has switched from CRT to HDTV and flat plasma, LCD or projection sets. the glare off the glass is gone, and, except in very bright lighting situations (like flourescants or direct sunlight) they look incredibly better. I am talking about dozens of people, all who rave about it and wish they had done it sooner.

O was looking at an other smaller HDTV today at Circuit City, and noticed there were no larger CRTs. I asked, and they said that nobody bought them so they did not offer them. this may be a store by store decision, but the biggest CRT was 24 inches. Everything over was not CRT.
>
>> Brenda, you are sounding like a Luddite.

> interference to any listener should be unacceptable to any broadcast
> engineer worth his or her salt (and from all the engineers I have talked
> to, most do feel that way, and do not like IBOC).

This is the "if a tree falls in the forest and nobody is around to hear it, does it make a sound?" uestion. If nobody is listening to fringe signals (with "nobody" being defined as, let's say, 0.1% of the population or more) then doing something that will benefit the industry and keep it from failing is not interferring as, to me, interference means something is getting int he way of something I want to do... and less than 0.1% of th epopulation wants to hear distant signals. So, for the benefit of radio, HD is a good idea.

> And I don't like being forced to 'upgrade' to DTV when it obsoletes the 5
> brand new televisions I have in my home. And converter boxes, no matter
> how much you try to say so, do not produce a picture as good as NTSC

> analog.

Not my experience. Of course, I do not use cable (believing firmly that "customer service" and "cable company" can not be used legally in the same sentence) but, rather, the wider offerings of satellite TV. Si maybe my reception or picture quality is better... or your cable system sucks (as 99% of them do).

> engaging and interesting programming. In other words, programming to say
> something, make real art, or an original point of view without focus
> groups, or polling data. Do that and the advertisers will start a bidding
> war to get a spot on your station.

No, they will not. Advertisers by "by the number" and use ratings data and
demographics to determine the efficiency of each station. Advertisers seldom
look at what they are advertising on or in.

Focus groups and other research techniques determine what people like to
hear, so it can be provided. To not do that would be to say, "I know what is
good and I am going to do it whether they like it or not." Arrogant, in a

word.
>
> The most insipid example I can give you of "giving the people what they
> want" is the American Idol show. Don't get me wrong, these artists are
> talented. But they're highly unoriginal. In other words, they're "safe".

It is also popular. commercial media here or in Pakistan or South Africa or Argentina provides things lots of people like, not stuff few people like. OOption tow makes you go out of business. Option one makes you happy as a station owner.
>
> Would Louis Armstrong have a chance in today's radio market? Would Bix
> Beiderbeck? How about Jimi Hendrix? Pete Seeger? George Gershwin? I
> have to wonder. Many artists believe that they have hit the big time
> despite the recording and broadcast industry, not because of it.

Music programming is done no differently now than in the 50's- Before that, the musicians' unions severely limited the playing of phoneograph records, so the comparison can not be made. But form about 1950 on, radio plays the songs people like with the only difference that there are dozens of different music formats, while in the 50's there were only a couple (MOR, Top 40, race and country). Today, stations in every format that plays new songs debuts new music regularly... so more new songs by more new artists are heard today than ever in the past.

Radio's job, however, is not to sell records. It is to sell advertising.
>
> The problem is one I've outlined years ago. It's basically a version of

> measuring technique affects the thing you measure, you really don't know
> what you have. Using polling data and focus groups to determine your
> music programming is a self fulfilling process that will guarantee
> mediocrity.

Not really. The methodology of checking songs is simple. You identify your own listeners in proportion by age and sex. You let them hear songs, and they score them. You play the ones they like. Very simple. And there is no bias introduced by doing the measurement. In fact, in nearly all competitive situations, stations researched this way beat ones that do not research. And the ones that do not turn out this way are usually caused by signal disadvantages, poor talent, bad processing, ets.
>
> As for whether IBOC is a good or a bad thing, I'll say this: AM could
> sound good. However, nobody sees fit to purchase a quality receiver to
> listen to a better sound. Thus it has been relegated to a secondary
> status.

BAck in '78, the FM band for the first time had more than half the listening in the US. AM was perceived as lacking in quality, and stale. And not in stereo. AM stereo came too late, some 5 years later, and receiver manufacturers realized that nobody paid attention to the quality of AM so they saved a few cents per radio by cheapening the AM side. Nobody

complained.

> And so you can walk away making the point that gosh, the noise from IBOC
> doesn't make things that much worse because it already sounds like crap to
> most people.

The real issue is that most American AMs do not even cover thier own market well. So, if you exclude the bad signals, you are left with maybe 5 or 6 good ones in NY, LA, Chicago. None in DC... a couple in Detroit and Cleveland and Nashville and Omaha. In other words, an average of 2 or maybe 3 good AMs in the bigger markets. These, with HD, can continue to be high billers and valuable to listeners. 25 of the 100 top billing US staitons are AM still. That is good.

> Broadcast AM wouldn't sound like crap if the programming was there to

You only sell commercials if you have high ratings. If you find mass appeal radio to be bland, so what. Most people don't. And advertisers by ears, not taste buds.

They are having difficulty because most of what they offer is available for free, and most folks do not want to spend money for a new receiver and $150 a year for satellite. Much of what is on satellite is good, if not inspiring. But it costs money.

I'm a database analyst by day and I know statistics can be made to say anything you want them to say, especially if you ask the wrong questions that reflect what the reviewer wants to hear and not what the public wants to tell them.

As a typical listener with the typical radio found in Wal-Mart I could get a single AM station with local sourced programming and as you can tell I am not fond of that daytimers programming. There are currently no local FM outlets in my immediate area that are not lights out satellite or microwave feeds from remote studios.

When I moved to this area 25 years ago there were multiple AM and FM stations with local sourced programming that served the public interest with decent local news programs, local interest call in talk shows, lots of different types of music programming and they alerted the public to local emergencies and disasters that might impact their listeners. I did not like all of what I heard but at least I had a choice.

Today the programming in my area is stale. The programming is repetitive and redundant. The programming does not serve the public interest.

I know I am not going to get you to understand or respect my observations.
I do not expect anyone to agree with me.
The numbers you throw up do not reflect my areas reality.

So what is my solution ?
For AM I throw up a 150 foot wire antenna attached to my Kenwood TS-430S to catch a few stations with programming I appreciate.
For FM its a deep fringe VHF/UHF roof antenna, mast mount preamp and rotor to pull worthwhile stations out of the mud, or the XM radio feed provided with my DirecTV subscription, or if I wish to go back in history I have converted my entire record and tape collection to CD-R and MP3. This gives me a collection of popular music that includes my Great Grandfathers Jazz 78's from the 1920's (lateral and vertical cut), my Grandfathers Swing record collection, my Fathers 1950's record collection and early reel to reel tapes of variety TV shows of the late 1950s and early 60s, tapes of early FM Stereo programming, and my own 60's thru 80's record and tape collection. So I have other choices. Probably more than most of the general public.

I really can't see how any compressed audio will be better than PCM.
Again, without hard facts on HD quality, I'll assume it isn't as good
as PCM until shown otherwise.

I can live with FM HD, but the reduced BW of the AM signal isn't a good
idea. KCBS post HD sounds like KFI. [Hey, if I sounded as bad as KFI,
I'd whisper my station ID too.] And the potential interference with
out of town stations (i.e. where the hash of one IBOC channel sits on
the analog signal of another station) is a real show stopper,
especially if at night.

You need to consider all those people who don't live in metropolitan
areas, or even those driving on I-5. I can see HD leading to XM sales
for those who do any rural travelling or live in the sticks.

Since when does the FCC adopt a standard that hands money to one
particular patent holder?

There's an article on page 21 of the February issue. It's also mentioned and pictured at http://www.monitoringtimes.com/html/mtswlprimer3.html but no detailed plans there. The MT article states the center connector is from Hy-Gain http://www.hy-gain.com/products.php?prodid=C-1 and the 4:1 balun is a Van Gorden. The author cites AES and Durham Radio as retailers.

Thanks for the inquiry. I've been in the mood to put up another antenna and this looks like my next project.

I tried making that point a couple months ago, with no affect.
Everyone thinks that any collection of data can be analyzed with a
normal distribution... and it just ain't so.

Likewise, like you say, surveys are often -- perhaps usually --
slanted to return the results they want. My personal experience with
Arbitron left me unimpressed.

The whole radio ratings game is a self-serving, narrow minded exercise
in mutual masturbation. Eventually the listeners will abandon radio
for podcasts, MP3s, email lists to discuss the latest bands, and so
on. Radio can no longer count on its captive audience.

In most radio station testing, you do not even use questions. You have people score songs and program content, using a dial.

In any case, why, for gosh sakes, would a radio station do testing or perceptual research which yields wrong results? I have never heard of a staiton or statrion staff that wanted ratings to go down. So weeks and weeks are spent working with professional researchers and statisticians to make sure that there is no question wording bias, no interviewer bias and that the qustions are clear. Further time is spent in setting a recruit specification that reflects the core audience or an audience segment that you wish to bring into the project.

There are several dozen very professional companies that do research for radio stations. A couple of companies have hired very good people and do projects in house with thier own research divsion. Some even operate permanent call centers with 20 to 40 seats, rotating projects and markets where the company operates.

All this is beyond Arbitron, which is a sales tool and excruciatingly well audited by researchers and statisticions in a committee appointed by advertisers, not radio, to make sure rating reflect the real size and composition of audience that stations are charging for.

That sounds like a small market. Very small. The FCC in its infinite wisdom , allowed a t0ousand or so new staitons, mostly in small markets, about 15 years ago. It made profitability nearly impossible in some places.

To discuss this intelligently, it would be nice if you revealed the name of the city.

Just FYI, nearly no FMs today broadcast from their transmitter. They use microwave or T1s to send the signal form the studios to the transmitter. What you call "microwave feeds" are the usual way of linking studios and

transmitter for the last 30 years or more. T1s are replacing them, as they are more robust and have two way data capabilities. But, having the transmitter remote fromt he studio is nothing odd, and does nothing for or against the quality of programming.

How do you know? Have you surveyed th epublic? I would bet the statins have, and I would bet they are doing exactly what the listeners want.

> The numbers you throw up do not reflect my areas reality.

For all I know, you are talking about Durban, South Africa. Until you "reveal" the city, your points are without value.

This proves you have broad and very eclectic tastes. That is nice. Most people don't.

A few years ago, a station went on in San Antonio, playing 57 hip hop songs. In 90 days, it was #1 in the market. It had only changed about 12 of the songs in the 90 days. Today, it is in its 5th year at #1 and stronger now than before. It plays about 100 songs in total. It changes a couple in and out each week. It beats the #2 station by about 30%. Its listeners, when interviewed, love the station and think it has the absolute best variety of music on the planet. that is because the 100 songs are what the listeners

say they want to hear. that is how it works.

KFI is the #3 radio station in LA, the worlds largest radio market in terms
of revenue. It is the 4th highest billing radio station in the US, and,
maybe, the world. YOur subjective judgement on the quality seems to be
unobserved by the 1.2 million Angelinos that listen each week.

> And the potential interference with

In most every part o fthe US, there are multiple FMs, even in western ND or
on the Navajo Nation in AZ, to name a few. Nobody listens to fady AM when
they have FM at hand, or other alternatives like satellite.

AM clears used to get lots of truckers at night. But daytime, they had to
dial from station to station to get music or talk they liked. Today, nearly
all truckers have satellite, which is a perfect application of that
technology. Local statins do not care a bit about losing out of town
truckers or out of town anyone, as they do not help sell local advertising.

You and steve miss the point . Radio staitons have no reason to order bad
research. Jobs depend on increasing or holding ratings. Very good companies
are used, and they spend lots of time avoiding the pitfalls you mention.
>
> Likewise, like you say, surveys are often -- perhaps usually --

Advertisers have a committe that audits them. That is adequate for them to
spend about $21 billion on radio advertising. Advertisers seem to believe
the nature of Arbitron ratings far more than your rather distorted and
inaccurate to the Nth degree analysis of thier function and methodolgy (you
do not even get the terms of the trade right).
>
> The whole radio ratings game is a self-serving, narrow minded exercise

It never could. 45's, TV, cassettes, CDs cable, satellite TV, satellite
radio, 8-Tracks, video games, etc., etc. all compete or have tried. Radio is
pretty resilient and still reaches 93% to 94% of Americans weekly for about
the same amount of time as in 1950. There are and always have been people,
like you and Steve., who expect something else... sort of like asking for
the New Yorker to publish a Fargo edition... that is actually of interest to
nearly nobody.

Oh my gosh. Somebody has done a real leftist whack job on you, sister.

In the US, no company owns more than 8% of all staitons, and the first 10 companies onw less than 20% of them. There are, in fact, about 3,000 owners of the 13 thousand US radio staitons.

Newspapers are one of the least consolidated industries in the US, with no company holding even 10% of US circulation. In fact, the biggies like Gannet or McClatchy have just a few percent of total daily circulation. One of the reasons is that newspapers are a bad investment, and are dying very slowly. There are hundreds and hundreds of different newspaper owners.

There used to be 3 TV nets, with three owners. There are now over a hundred, with about 30 owners, including multiple minority networks like BET and Univision and Galavision.

It is very bad for them. It doubles the free FM formats or options in each terrestrial market. XM and Sirius sell based on"more options" and HD gives for free what costs $150 a year on satellite.

What a great read this was. If you were ever curious about making your own BCB loop antenna or wondered how they actually work, then this is the thread for you. Some of the same posters back then are still here but some have sadly seemed to not post anymore. A poster wanted to know why his rat shack loop wasn't working with his GE Superadio and it took on a life of its own.The group is definitely 'different' than it was back then, just my opinion of course. If there isn't anything good to read right now for you just click or cut-n-paste this one. Hope I posted it right. Enjoy?

Source record: 76595

For One and All,

Grove Tunerless All Band Antenna - a little bit of this
and a little bit of that . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9847

Here is my take on the Grove Tunerless All Band Antenna
(See Drawing).
http://www.monitoringtimes.com/html/mtswlprimer3.html

The general design appears to follows that of a "G5RV"
Multi-Band Antenna developed by Louis Varney [G5RV]
http://www.astrosurf.com/lombry/qsl-g5rv.htm
http://www.astrosurf.com/lombry/qsl-g5rv-2.htm
http://radio.thulesius.se/div_mtrl/g5rv.htm
An Equal-Arm "Dipole" Top Section connected to a
Twin-Lead Down-Line Matching Section ending in a
SO-239 Connector which is then connected to the
Coax Cable feed-in-line.
http://www.radioworks.com/cg5rv.html
http://www.wb0w.com/g5rv/g5rv_antennas.htm
http://www.cebik.com/wire/g5rv.html

What makes this Grove Tunerless All Band Antenna
'different' from a standard G5RV Antenna :

1 - The Top Section is not a standard {Equal-Arm}
Dipole Antenna but and Off-Center Fed Dipole -or- in
this case a Windom Antenna given the measurements
Short-Arm of 44 Feet (33%) and Long-Arm of 90 Feet
(67%) for a Tip-to-Tip Length of 134 Feet with 48.5
Feet of Twin-Lead as a Down Lead Matching Section.
http://www.packetradio.com/windom.html
http://www.kh2d.net/windom.cfm
http://www.ve1dx.net/windom.html
http://www.cebik.com/gup/gup9.html

2 - The 4:1 Matching Transformer at the junction of
the Twin-Lead Down-Line Matching Section and the Coax
Cable feed-in-line. Often with the Windom Antenna the
Matching Transformer is at the Horizontal Feed-Point
of the Wire Antenna Elements and there is simply a
Coax Cable feed-in-line. With this Grove Tunerless All
Band Antenna we have the Twin-Lead Down-Lead Matching
Section between the Horizontal Wire Antenna Elements
and the Matching Transformer; which makes it more like

a G5RV Antenna.

Question - So What Is Your Take on the
Grove Tunerless All Band Antenna ?

Say what?? I remember the FCC "letting the market decide" on which AMS system would prevail. In Portland we had both C-Quam (KGW, et. al.) and Kahn-Hazeltine (KKSN). Don't know if anyone was using the Magnavox system, but it was more or less compatible with C-Quam anyway.

Good show, Steve. We have an extensive library here, too. Over 4000 CD's which have also been backed up to MP3. We listen to radio ONLY for local news and programming. If it's not there, we won't listen at all. Won't bother with XM or Sirius, either (assuming we ever make it home at all), and damn sure won't feed the money grubbers that have destroyed local radio and are in the process of destroying choice (go ahead, Eduardo, tell us how much more choice we'll have with IBOC..... if I can't listen to the stations I want to hear, then all you're doing is taking choice AWAY from me, and millions of others.)

Yes, proprotionally, but I'm interested in how many listeners AM might keep
if they went to IBOC at night. That's what I meant with "absolute numbers".

A further speculative comparision would concern the total number of
listeners with and without IBOC. And not the total for any given station,
but the total for the radio industry. After all, if IBOC doesn't draw a
larger number of dollars from the advertisers, it's expenses will be a loss.

In his book, Get Back In The Box (http://www.rushkoff.com/box.html),
Douglas Rushkoff describes what happens when marketing gets too obsessed
with drawing people in to buy. It becomes dreary and painful.

Rushkoff also debunks the value of focus groups by showing that the
choices of who listens aren't really as random as those nice folks at
those research firms would have you believe.

What you are hearing from this crowd is that many are sick and tired of
the efforts to market stations so tightly. Owners have to loosen up or
people will pretty much ignore the marketing.

It's like stores which are calculated and studied to provide the maximum
number of cues to get people to want to buy Buy BUY! The stress of such
environments from keeping your guard up all the time against subliminal
marketing is not small.

People are tired of the mentality of those who would play the sound of
roaring chainsaws if there was a buck in it. You're in the business of
engaging and attracting listeners. If you think that is best done by
statistics, then you must have one of those pictures of Elvis on black
velvet in your office. It's been selected by a focus group...

> In any case, why, for gosh sakes, would a radio station do testing or
> perceptual research which yields wrong results? I have never heard of a

> specification that reflects the core audience or an audience segment that
> you wish to bring into the project.

Why would a radio station do this? Because of a herd mentality which
says this works. And as such it does work --sort of. If you only have
a choice of bland, drab, same, and similar in highly formatted stations,

guess what happens? People lose their taste for the unusual.

As you say, it's been going on since the 1950s. How would you know
what's different from this?

> There are several dozen very professional companies that do research for
> radio stations. A couple of companies have hired very good people and do
> projects in house with thier own research divsion. Some even operate
> permanent call centers with 20 to 40 seats, rotating projects and markets

> All this is beyond Arbitron, which is a sales tool and excruciatingly well
> audited by researchers and statisticions in a committee appointed by
> advertisers, not radio, to make sure rating reflect the real size and
> composition of audience that stations are charging for.

Let's do art by statistics. I'd like to see what the average painting
would look like after you have sent it through a few focus groups.
Would you hang it up on your wall? How about a picture of Elvis on
black velvet?

> This proves you have broad and very eclectic tastes. That is nice. Most
> people don't.

Yes, but is that because they choose to be that way, or because they've
been living in a bland environment since 1950?

How did most new formats get started? By listening to stuff THAT WASN'T
ON THE RADIO. Did Rap music get its start on radio or in clubs? Did
early Rock and Roll get it's start in the formatted, conformist radio of
the day? Or did it get a big boost from people listening to Mexican
Radio stations?

I could go on like this. Most new "formats" got their start from
somewhere else. The latest contribution from formatted radio? The
"Jack" format. Nothing but a bunch of canned wisecracks in between a
mashup of all the Rock from 1970 to the present. Gee. That's supposed
to be original?

Yuck! Most people have more CDs than that.

David, people are saying that the choice of music is an art, not a
statistical science. Near my market, there is a radio station that
actually advertises +the fact that they do not use focus groups, program

directors, or their ilk. It's WRNR. They rely on their DJ's judgment. What a concept!

Sometimes it's unlistenable. Others, you simply can't bring yourself to turn off the radio. But there is never a dull moment, and it has a spot on the station buttons in my truck even though I can only hear them toward the end of my 45 minute commute.

One thing I want to point out to you about the artists I mentioned in my previous post, ALL of them were highly controversial. Many things they did weren't popular right away. Most focus groups would have trashed these artists. You would never have seen these folks on the air before they gathered a following outside the medium.

This is why we say that radio is a vast wasteland. You are talking about marketing, not art. Now, in the scheme of things, I'm saying there isn't anything wrong with non-stop marketing. But they have to draw their ideas from SOMEWHERE. Radio today is saturated with bland, simple, uber-happy talk, and a very limited selection of statistics driven music tracks --what make you think that it hasn't affected listening patterns?

If there is so little R&D done in this business, then where do the marketeers get their ideas from? Oh that's right. Someone takes a risk. No wonder everyone thinks the same as you do...

Propagation must be fairly good as I can hear WWV on 20 Mhz here today which is not always the case in this part of the sunspot cycle.

WWV also audible on 2.5, 5, 10 and 15 MHz at 1215.

How precise would the tracking need to be? Isn't polling good enough? A good general sense of what people are doing should be much better than guesswork. Moment to moment tracking seems well into the area of diminishing returns.

> HD is highly researched. But no new product, without trial, can be well

Yeah, back when I was more progressive, anything "space age" was better. Well, actually I was a sarcastic youngster, and I thought mundane products wrapped with pictures of stars and a rocket ship were pretty funny. The regressives didn't take long to catch up.

> We also know that HD 2 doubles
> the programming choices, which is good. But radio is part creativity, and

The question seems to be -- what do people want? The mass market didn't support FM back when it was the new and improved radio. I think there's a good case to be made that increased interference is driving people away from AM, and a reasonable first estimate might suggest that AM IBOC numbers might more or less balance FM's, with similiar programming. So, maybe it improves AM fringe reception, and a few listeners switch from a FMer to an AMer.

The broadcasting establishment concievably could get out of radio someday,
but I can't imagine any way radio itself could go away. If the price of the
equipment goes down enough, there will always be some dreamer who will try
to make a go of it.

And the evangalists don't expect to turn a profit.

> However, we weredall told that the
> Internet and streaming would kill radio back in the late 90's, and that

But there are reasons streaming audio didn't have many advangages over radio. "Net congestion" audio. Streaming wasn't portable or availble on a car radio. Podcasting fixes those and offeres it's own advantages.

>
>

At present, no. But I don't think it would take a technological breakthrough for somebody to do it right now. That's "somebody" not "everybody". And, if there's a limitation on internet bandwidth, we're nowhere near it. Bandwidth will continue doubling and doubling again into the forseeable future.

Radio, however, is stuck. It might get a bit more bandwidth at the fringes, but it won't double.

I also suspect IBOC is fixed in it's currrent incarnation. The newest IBOC AM might sound good even with it's limited bandwidth, but I can't see any reason why similiar bandwidth conserving plans can't be used across the internet. And the internet has the advantage of being able to continually update it's decoders.

Although I sitll figure ibiquity has the pay radio card up it's sleeve.

I wouldn't blame the ipod generation if they thought IBOC just another dinosaur media attempt to sell them something like a more sharply pixellated newspaper.

Oh, my. A bunch of entrepreneurs started a bunch of radio stations which now hardly have any listeners and don't make a cent. They're just interfering with the radio establishment. Good thing nobody will be much bothered when the bigger station's IBOC generators light up. Sheesh.

Source record: 76510

When I was little(r), almost all small portable radios used 9-volt batteries. There were some, of course, that used AA's (or even 1 AA; I had an am portable with 1 AA cell that we snuck into school when something-or-other REALLY important to schoolboys was going on), but now I don't have & don't know of any radio that uses 9V batteries.

Why were they needed in the first place? The 9-volt package has a lot more package and a lot less mWatthrs in it. Was it because of the voltage - did the existing solid-state tech not work so well at 3V?

New radios with all bells + whistles
cheaper then a 20yr old as is doa rig

what kills hamfests is lack of interest

buyers of estate gear at dirp cheap prices
that markup to sell on ebay and hamfests.

The digital channel can be sliced into one, two or more channels, and receivers see these as HD 1, HD 2, etc for each station. There are several hundred of these HD 2 channels already launched.

The FCC chose the Magnavox, and Lenard Kahn sued, and then the FCC came out with a marketplace ruling 5 years later. To get to C quam, we went through a singe system ruling, a lawsuit by a disgrunteld designer who did not care if he killed AM,, and then a marketplace rulling. So they DID do a single system ruling, even if changed later. The result was C Quam, and one company getting all the (very limited) money for generators and royalties for recievers.

There is no way of knowing. Thee is just a feeling that better quality AM
audio will make people far more interested in using it and, even more
important, make it more competitive with FM.
>
> A further speculative comparision would concern the total number of
> listeners with and without IBOC. And not the total for any given station,

This is totally unpredictable. There is no research method known that will predict so many variable. However, as the programming improves, as receivers get cheaper and as people become aware of HD, there should be an improvement. Many companies that considered selling all their AMs are keeping them in the belief that HD will make a significant difference. We are talking about billion dollar decision in the case of several of the broadcasters that had been about to spin off all their AMs.

And even cheaper when you buy it at the Hamvention - same rig in the store a day later is $50 more...

>what kills hamfests is lack of interest

Sure, but the reason for the lack of interest is the crux of the situation.

>buyers of estate gear at dirp cheap prices
>that markup to sell on ebay and hamfests.

Some people gotta make a buck... But the Hamvention is coming back, I think - there were _definitely_ more people there than last year, and equal or more exhibitors both in the flea market and inside. We may yet get back to the state of affairs where there's 30,000 people coming to the Hamvention again, complete with a banquet and free buses, and buses to the motels. We can hope - its a great weekend.

We do need more ham radio gear and less outright junk in the flea market, tho.

This is one person's opinion, vs. the empirical evidence of ratings
improvements after testing music.
>
> Rushkoff also debunks the value of focus groups by showing that the
> choices of who listens aren't really as random as those nice folks at
> those research firms would have you believe.

Radio hardly ever uses focus groups.

Music testing is done by gathering information just as Arbitron does on
potential recruits, and then selecting those that either use your staitons
enough or use comparable stations enough to be of value in evaluating music
selections one by one.
>
> What you are hearing from this crowd is that many are sick and tired of
> the efforts to market stations so tightly. Owners have to loosen up or
> people will pretty much ignore the marketing.

Sorry, but stations have used music research since the 50's, none of it
based on your supposition that they are conducting focus groups, and there
are very few cases of stations improving ratings by not doing research vs.
many that do by doing it. I have many times competed with unresearched "gut
feel" staitons and the whupping they have received has been as big as a 10
to 1 margin (it is more usual for it to be in the 1.5 to 1 to 2.5 to 1
range, though)
>
> It's like stores which are calculated and studied to provide the maximum
> number of cues to get people to want to buy Buy BUY! The stress of such

> environments from keeping your guard up all the time against subliminal
> marketing is not small.

You are confusing getting people into the strore with the merchandise assortment. Retal first seeks to get people in, but they use merchandise "hooks" such as selection, price, sales, etc., to get folks there. Radio uses marketing, separately conceived, to get folks to "cume" a station and then they use "merchandise assortment" which means the number and selection of songs (or topics on talsk) to get them to stay (like buying in retail).

You have confused cume driven marketing with the actual programming. Your error is fatal to your argument, showing you do not understand the dynamic of cume and TSL, the only tow things ratings measure. Cume is considered a "usage" of a station in the survey period, while TSL is how much listening to the station was given. Cume is getting to the store, and Time Spent Listening is how much they consumer "buys." You need a range of both to win.
>

We are in the business of keeping listeners, much more than attracting them. Each format will have a potential partisan base. A country listener will seldom use an R&B or Spanish station, so we can, with fairly simple procedures, know in each market the potential of one genre of programming based on demographics and prior experinece in other markets. So the big job is to tell people they have the option, and then do as good a job in playing the right songs in the right atmosphere that we can.

There never was a taste for the unusuall. When AM radio was first supposed to die, right after the TV freeze was lifted, we had only two formats in the US... MOR (Gogi Grant to Perry Como and the bands) and the emerging Top 40 (first one in August 1952). Top 40 beame mostly rock 'n' roll, and MOR was older adult oriented. Then, in some markets, we had country (only limited viability in the 50's) and Spanish (just a handful of markets). And a few

"race" stations in deep south Black markets Nothing else.

As radio developed as a music medium, we found that Top 40 was 3 formats, AC, CHR and Rock. And Rock became multiple formats. And old Top 40 became oldies. And country became viable, as did R&B and Spanish and religion and talk and other formats.

The "narrowness" you descibre always existed. Listeners settled for liking every other song on Toop 40 because there was nothing else. Once the AC songs were dropped and only rock was played, some were more happy with the AC and others with the rock. They became superserved compared to being settlers. Most folks do not want a variety on the same station. They want predictability. If they are of a mood for something else, they go to a different station.
>
> As you say, it's been going on since the 1950s. How would you know what's
> different from this?

By watching stations that DON'T do it I work a lot outside the US, and often have the opportunity to kill competitors dead when they think that variety is MORE songs and that asking the listener what they like and dislike is not necessary. I also know by having tried the opposite and failed miserably.
>>
>> All this is beyond Arbitron, which is a sales tool and excruciatingly

> you hang it up on your wall? How about a picture of Elvis on black
> velvet?

We are not creating a painting. we are providing a museum. The paintings are the songs or the talk topics. They are pre-created and gallery attendees know what they like or don't in art, and go based on whether our gallery shows good stuff or not.

Your analogy fails terribly, again.
>
>> This proves you have broad and very eclectic tastes. That is nice. Most
>> people don't.
>
> Yes, but is that because they choose to be that way, or because they've
> been living in a bland environment since 1950?

It has been proven by analyzing successes and failures that stations with cohesive playlists of researched songs do better than any of the alternatives. Plenty of staitons have tried the other ways, and there is a reason they have not survived.
>
> How did most new formats get started? By listening to stuff THAT WASN'T

> ON THE RADIO. Did Rap music get its start on radio or in clubs?

radio reflects taste, and does not usually create it. Radio picks up on change and adopts it. Hip hop (which was a progression from rap) just eased in on the Urban and CHR staitons. Rap broke into radio, as often happens, when one artist has a big, crossover hit.

> Did early Rock and Roll get it's start in the formatted, conformist radio
> of the day?

Rock 'n' roll broke out of race stations, which was the name Black staitons were called in the 50's. Then, several DJs in Cleveland, Alan Freed and Pete "Mad Daddy" Myers and Bill Randall started playing the tunes on Top 40 stations, especially at night. It then spread.

> Or did it get a big boost from people listening to Mexican Radio stations?

Nope. It got its bigest boost form Todd Storz and Gordon McLendon.
>
> I could go on like this. Most new "formats" got their start from
> somewhere else.

That is correct. If you take a new music form and build a staiton around it, it is usually too much of a new thing One station about two years ago tried an all Chill format. It died. Nobody liked chill enough to listen all the time.

> The latest contribution from formatted radio? The "Jack" format.
> Nothing but a bunch of canned wisecracks in between a mashup of all the
> Rock from 1970 to the present. Gee. That's supposed to be original?

It is a relief and a broad wampling of the biggest hits from multiple genres all on one staiton, with no jocks. The biggest sell is the jocklessness, as many listeners in the target group hate all jocks.

Anyway, most formats don't "happen" but, rather, they evolve from other formats. Jack is an evolutionary format, mixing CHR and Rock and creating an oldies format for boomers.

>
> Yuck! Most people have more CDs than that.

So? It works! If they wanted to listen to the CDs, they would and could. The fact is, they like the blend and the jocks and the events the statin does and so on. they are after the concotion, not the ingredients.

>
> David, people are saying that the choice of music is an art, not a

> actually advertises +the fact that they do not use focus groups, program
> directors, or their ilk. It's WRNR. They rely on their DJ's judgment.
> What a concept!

Yeah, it is 31st in the ratings, very near the point where it will not even qualify for listing. What a wonderful concept. Totally ignore the listener and what they want to hear, and say to them, "I don't care if you don't like brocolli... eat it!" Listeners do the obvious... they don't listen in droves. That is a horrible concept, certainly the kind of think an inexperieced owner at the fringe of a metro would do. the owner, by the way, is a guy who was one of the most research driven programmers in the US... and I would bet that every cut in the library is pre-approved from a safe list. No research (probably can't afford it) so they use a compendium of the songs AAA staitons in the US play, and the jocks can play any of them they want. That is simply using someone elses research in a different market.

>
> One thing I want to point out to you about the artists I mentioned in my
> previous post, ALL of them were highly controversial. Many things they
> did weren't popular right away. Most focus groups would have trashed
> these artists. You would never have seen these folks on the air before
> they gathered a following outside the medium.

Again, again, again, again. We do not use focus groups to test music.

We only test familiar music. All new songs are judgement calls, and we test them after the listeners have heard them enough to judge emotionally, not analitically. we don't test artists, we test songs. Stations add plenty of new songs, often by unknown artists. Using the #1 AC station in LA as an example, more than half the artists in the current categories were unknown 5 years ago. So that station must have, at some point, been the first radio station in the market to play them. And they gathered a following because the station played them, as where else would they be heard?

>
> This is why we say that radio is a vast wasteland. You are talking about
> marketing, not art.

It is a blend of marketing to get folks in, science and art to get them to stay, and sales to make it profitable to keep doing it.

> Now, in the scheme of things, I'm saying there isn't anything wrong with
> non-stop marketing. But they have to draw their ideas from SOMEWHERE.

>
> If there is so little R&D done in this business, then where do the
> marketeers get their ideas from? Oh that's right. Someone takes a risk.
> No wonder everyone thinks the same as you do...

We test new format blend all the time. We look at ways of combining music in different ways, balancing in different ways, etc. We add now songs by new artists on every format that plays new music every week. we know too much new music kills us, and we know that not enough makes us stale. We have an intuitive idea of how a station should sound (good PDs can hear a station in their head long before it is on the air), and most listeners are very happy.

> support FM back when it was the new and improved radio.

FM only "worked" when the FCC mandated a cessation of simulcating, in the late 60's. New formats popped up left and right, and people liked them and got radios.

> I think there's a
> good case to be made that increased interference is driving people away
> from
> AM,

AM has been relatively stable for about 15 to 18 years. What has hapened is that the decent signals, which are very few in each market, have developed viable talk and spots offerings, and the remainder of staitons have found small niches to serve, predominantly religious or brokered in the larger markets... even a few music foormats like standards and gospel get some numbers and some sales on AM.

The determination of AM listening is the local groundwave signal. Even going back 2 decades. scant listening to out of market signals was measured, even in rural areas. This is because FM was highly built out, reaching most every corner of the US with multiple signals.

> and a reasonable first estimate might suggest that AM IBOC numbers might
> more or less balance FM's, with similiar programming. So, maybe it
> improves
> AM fringe reception, and a few listeners switch from a FMer to an AMer.

There is no fringe usage, anyway. (meaning that probably less than a tenth a percent of AM listening is to staitons not home to the local makret). Even truck drivers now have XM, so the skywave coverage is actually a negative (it comes back down and creates an interference zone with groundwave) rather than the positive it used to be.

Actually, the owners of most 80-90 stations were already owners in other markets. All they did was file for as many of these things as they could. Or, in some cases, entrepreneurs filed, and then, when granted, sold to existing broadcasters.

> They're just
> interfering with the radio establishment.

They were the radio establishment. In fact, the original case of Bonita Springs saw a single owner, Dick Friedman, lose the license to Beasley, who had the FCC limit of staitons.

> Good thing nobody will be much
> bothered when the bigger station's IBOC generators light up. Sheesh.

There are already over a thousand HD stations on the air. There is more theoretical complaining here than among listeners.

Interestingly, two years ago KFI reduced bandwidth to prepare for HD. Since they did that, their ratings have increased from bottom of the top 10 in LA to #2. As I said, this group complains far more than the listeners who simply will have better quality and more format options.

Wonderful idea, except that AA is a network, not a station owner. They own
no stations at all, and never have. they provide programming, and the
biggest user of it is Clear Channel, the largest US station owner of all.

The top 30 station owners do not own 20% of all US stations. There are
nearly 3000 different owners in the USA.

When I was with CBS, and Mel Karmazin was running the radio division,
he used to come to us from time to time, for a staff breakfast and a chat.

He would do most of the chatting.

The subject of IBOC came up at one such, and at the time IBOC was
still quite a ways off. But he did pointedly say that the future of any
successful business long term will include multiple revenue streams, and
that IBOC, much in the same manner as SCA, will offer the opportunity
for alternative programming streams, and the digital nature of the
stream will permit technology to be implemented for make alternate
streams both advertising and subscription based.

He said he was quite excited about this.

Similar pronouncements have been utterred about HD TV. But that's
another topic for another time.

The conversation became quite active with the rest of the staff, and
you could see exactly who was really getting it, and who wasn't. One
side was clearly excited about the digital medium for its quality
improvement, and the other, excited about the digital medium for it's
ability to be broken up into salable chunks to add to the company's
bottom line. Quality for that side was only an opportunity to steal
bandwidth from the higher quality transmission, and use it for other,
salable commodity. At one point, Karmazin said that users of radio are
not significantly driven by audiphile quality, and that the extra
bandwidth will be used for revenue enhancement, and that audio quality
will be about what it is now.

And what came out of that particular chat session was that the idea
that IBOC's implementation would create opportunities for new business.
And eventually, as a salable listener base becomes measured,
subscription radio.

This for FM. AM IBOC was not going to be as versatile, but would present the opportunities for marketing AM radio, again, but with, again, the possibility for subscription based listening.

A few years later Karmazin was 'out-Karmazin'd' By Sumner Redstone, and he found that the best way to improve his station was to gt out. Interesting that, now, he's at subscription radio and the discussion is about increasing the subscription base, and debate about advertising.

iBiquity may not have mentioned subscription implementation, but its licensees certainly have.

Nice post, with an interesting insigt from one company's point of view. Mel is definitely one of the most interesting people we have seen in radio, and his statements are well worth considering.

Mel, despite his rather edgy manner, did think out of the box as he looked at future revenue opportunities. I was once offered a job with him for the NY Spanish station, but was so putt off by either him or the native New Yorker he represented that I did not take the opportunity. It would have been an interesting ride, though, until one of us screamed at the other.

I have never had any discussion either in-house or with members of the industry committee, about pay channels. I think nearly all of us see that associating "pay" with terrestrial radio is a mistake. While the discussion may have come up, I never saw it progress. Most of us believe that splitting the HD digital FM in two offers great quality (absolutely marvelous, in fact, compared to iPod and satellite channels) and the ability to market new free channels.

Since there are only 100 shares in any market, there will be no expansion of radio listening, but there may be a slowing of any erosion. At the same time, selling today is about clusters and combos, not single stations for the most part... so having more specifically targeted stations will definitely help. Low spillage and finely honed targets get better rates than broad, vague targets, as sports AMs demonstrate.

It used to be the FCC served the public, not the broadcasters. Now it
only serves the public when naked breasts are involved. There ARE
people who live in rural areas where there is no FM service. Really,
I've been there. AM is all they got, so they DX all the time, not as a
hobby. IBOC is intentional QRM.

HD will do more harm to AM than help it. Everyone knows those "free" HD
channels won't be free for ever, Radio is about content first and
foremost. The only thing that will save us from HD will be the
religious stations that will not go HD because they won't pay the
royalities, and will complain about the reduced audience. For a
religious station, it is the schmuck with the check that matters, not

an Arbitron rating.

All:

My Kiwa-modified (audio improvements, sync detector improvement - all work done by Kiwa, not me!) Icom R75 with original box and packaging offered in trade for a Sony SW77 or other interesting portable (or other interesting table receiver). No issues, in good shape, pics available. Email me if you have any interesting trades in mind.

Oh, citizen opposition means something? The corporations and the chamber of commerce want cheap labor, and the politicians want their money.

There real problem I see here is not of race or ethnic background, but rather how many adults the US population can absorb that rarely have more than a grade school education.

Those who bring race or ethnicity into the discussion weaken the argument against illegal immigration.

LOL! I've heard tell that this happened from time to time at the
corner office at BlackRock. But nothing definitive.

I do know of at least one GM who voluntarily fell on his sword rather
than deal with Mel after a series of bad quarters. And here, in Chicago,
Mel refused to speak with my GM, after a revenue tumble. This went on
for a couple of years.

He's an interesting bird. And I'm not at all sure he's been good for
radio, except in that he put radio revenue on the map, and proved
conclusively that many of the myths by which radio lived were, in fact,
mythical.

I found him real easy to work for, though. He's very clear about his
expectations. You meet them. He doesn't care how, as long as it's ethical.

His expectations are VERY high. But, then, so are his rewards.

That's a dream job, compared to some I've had.

> I have never had any discussion either in-house or with members of the

I actually disagree with you about the mistake of pay terrestrial radio. And so do others in the biz. Truth is, that subscription radio, whether it be the baseband channel, or one of the alternates, may be the only way to create viability for some formats that are not supportable through traditional advertising.

My GM, for instance, desperately wanted to create a viable blues format. (Imagine, the Blues not viable in Chicago...but there it is). He could never get the perceptual data to support it. But subscription radio would have made that possible. Just as a number of the niche formats on XM and Sirius, now.

Now, on the other side of that, Karmazin believed the ratings/revenue relationship to be more myth than reality in the presence of REAL sales people. He preached it regularly. That the only thing needed to overcome weak ratings is more sales people, who could then create demand within an single station. Even driving rates up the card. And the 30+ sales ducks we had on staff were a testament to that. And he believed that any station that couldn't convert at a minimum of 200% needed an new Sales Mangler. We routinely converted at 200% and above.

So, though, it's a good bet that subscription terrestrial radio is bad idea, questionable at best, it's not entirely a settled issue. Out of the box thinking can make pay radio happen, and clever execution can make it work. Especially, where there is little advertiser support.

(One of Karmazin's other bone deep beliefs is that every service pay for itself. No one gets subsidized. And if it can pay for itself, it can profit. In that aura, pay radio is an eventual certainty.)

As far as quality goes...that's a better marketing point than it is a broadcast reality. Everyone talks about quality, and everyone has a standard, but where quality is defined as absolute faithfulness to the original material, it's failed everytime. If you use the tone control, on your car radio, you're not that interested in high quality. If you have an equalizer on your audio system....you get the picture.

HD Quality is, and will be, perceptual and personal. Right now, it's being presented at its optimum. That will change. Stealing bandwidth will begin. And look straight into your monitor and tell me you can name 5 engineers who can resist the temptation to 'tweak' their audio. Name me 5 more who don't believe they can 'improve' it.

The Quality pitch is temporary. Once HD is established, and there is a significant user base, the whole 'quality' issue will no longer be mentioned, except to say 'digital quality.' Which is what they say about Sirius and XM...and some of that is pretty ratty.

> Since there are only 100 shares in any market, there will be no expansion of
> radio listening, but there may be a slowing of any erosion. At the same
> time, selling today is about clusters and combos, not single stations for
> the most part... so having more specifically targeted stations will

> broad, vague targets, as sports AMs demonstrate.

No question. And HD formats will be, as cluster formats are now,
selected strategically, to protect the cash cow, and mop up any
periphery. Likely to be sold in unwired combo packages. With lip service
paid to innovative and alternative programming. At least in the short term.

And at least for the time being, you may indeed see a slowing of
erosion. New, exciting toys, with fresh options for things not commonly
heard. But as XM did recently, gutting a number of the channels I
enjoyed, and replacing the music I preferred to hear with things that
are more 'salable' and adding commercials to some music channels,
eventually terrestrial and HD will fall into the same patterns as
terrestrial radio exhibits, today.

The pith, here, is this statement:

"Since there are only 100 shares in any market,
there will be no expansion of radio listening,
but there may be a slowing of any erosion."

With evermore options for listening, and fractionalization of the
listenership into potentially thousands of niches, eventually,
programming offerings are going to have to be sold in combinations.
Actually quite large clusters of programming issues. That means that
programming offernings, whether on the baseband or the HD's, will have
to fit into certain packageable categories. Since the target demos
essentially do not change, and the maximum share is 100%, The total
numbers are fixed. Competition will have to be within the existing
numbers. Robbing Peter to pay Paul, as it were. Combo programming
packages will have to be selected, or created, with some target demo
participation. To remain salable in that context, some alternatives will
be too far off the target to be salable, in favor or more mainstream,
salable content. Not exactly like anything else, in the package, but not
that different, either. No matter how you slice it, if advertising
support is going to be part of the business framework, nothing's really
going to change, except how the programming offerings slice up the
existing demos.

In the end, the same research that gives you what you have now, will
give you a different slicing of the same listeners for thousands of new
channels.

More channels, less revenue per channel. More channels, less expense
per channel.

Profits fall.

Consolidation of expenses rears its ugly head, once again.

In the end, not much really changes, except how the pie is sliced.
Because there are only 100 shares in any market. And radio has saturated
the market with a mature product.

Now, in reality, Radio can't acknowledge this. Especially, not
today, in a stock price driven radio economy. So HD will forge ahead,
with promises of newer, better, cleaner, stronger.

Most only realized for a short time before economic realities crash
the party. The rest, unrealized at all.

All on technology that admittedly is a best guess at preventing
erosion. Sounds a lot like "do something, even if it's wrong."

But then, a lot of business is like that.

In the process. We, as listeners, get our dial trashed, but spend
more money. And in the end, the overall economy booms.

Which is the point. Because after all, in the US, Radio is ALWAYS
about the money.

Good choice - just don't buy anything Grundig, especially, the S350 !
The Kaito
and Degen are the same radio - the Kaito is, I believe, is made by
Degen, but
marketed/sold in the USA, and the Degen is sold over Ebay, directly
from overseas.
The Kaito is more expensive, but is easier to return w/warranty. They
are
dual-conversion (cuts down on SW images), digital PLL tuning (prevents
drifting),
and with single-sideband/SSB (enables listening to "ham" operators and
utility
stations). The S50 is just analog w/digital readout (drifts), does not
have
dual-conversion (lots of SW images), or SSB. Look at:

http://www.radiointel.com/review-degende1103.htm

These radios can be ordered off Ebay.com, for $45 + $20 S&H for the
Degen and
considerably more for the Kaito...

A friend was one of his major PDs. But he left, and Mel was upset. A few
years later, my friend, who I will call Bill Smith, was on an elevator at
NAB when Mel got on. Mel turns to a person who was with him, and says, "I
would swear Bill Smith was on this elevator. But that can't be. Bill Smith
is dead, so he can't be here." The door opened, Mel got off and my friend
broke into laughter.

I just don't think they will be on AM and FM. The problem is that the niche
formats, after the major ones are covered, do not get sizable local
audiences, even to justify subscription based concepts. Thi sis where
satellite works. take a format that attracts 500 listeners in the average
metro, and you have 250 thousand listeners in the top 50 cities in the
USA... or 125 thousand in the top 50 markets. With that, you can do very
good programming, as it is the equivalent of a #1 station in LA or NY. But
market by market, is is the equivalent of a no-show, and not enough
subscriber revenue to support it.

> We routinely converted at 200% and above.

There are fewer and fewer cases of this... there is a finite revenue base in
each market, and as one staiton overconverts share to revenue (power ration)
the others wake up and do the same thing, and it levels out. There is no
"undiscovered" revenue in any market.
>

I'd love to do some of these formats, well (not like XM, which is a bunch of
juke boxes, mostly) but with real talent and real PDs doing one format...
but on WiMax. If there is a system where you can "push star 113 for blues"
this will work. If we have to type in URLs, it will not.
>
> (One of Karmazin's other bone deep beliefs is that every service pay for

I think this was true in one window in time. In some cases,using one station
to protect or widen the moat makes another more profitable, so they,
collectively, do well. I did that back in the 60's, where I always tried to
have a spare station to use as the alligator in the moat to protect my big
stations from competiton. For those unfamiliar, consolidation is a very old
concept outside the US, going back into the 50's in places like Mexico. I
had a large cluster in Ecuador, built in the mid 60's... 4 AMs and 5 FMs in
one market.
>

Just look at the amazing percentage of listeners to FM who do not listen in
stereo... it is about good sound and good programming together. Hey, I

listen to an iPod while biking, and we know what that quality is...
>

In all fairness, engineers who know their stuff get a panel together when
tweaking and adjust the audio for a compromise sound for a range between
cheap and good radios, so that all can hear the station nicely.
>
>
> The Quality pitch is temporary. Once HD is established, and there is a

I am not pitching quality, I am pitching digital. We know that there is
sucky digital, but it is a buzz word. Whatever works.

Some of the new HD 2 formats are very clever, and others make up for what we
would have done if we had 5 instead of 4 statins in a market. In essence,
the formats are picked in descending order of audiencepotential, with
attention given to potential for taking your competitor's lunch a the same
time.
>
> And at least for the time being, you may indeed see a slowing of

> exhibits, today.

Only in a static world. All broadcasters arelearning that there is a much
lower commercial load that will hold listeners, and there is better
understanding of listeners. That will enhance the experience as product is
re-emphasized.

>
> The pith, here, is this statement:

Many are now. Clusters sell together for national and regional, mostly. And
lots do combos locally. It will increase.

> Actually quite large clusters of programming issues. That means that
> programming offernings, whether on the baseband or the HD's, will have to

Not necessarily. Efficient targets get better rates So targeting that is as
precise as magazines can be obtained, and advertisers pay more for less
spillage.

>
> More channels, less revenue per channel. More channels, less expense
> per channel.

Unless we use HD2 to develop very good regional or national concepts, those
that will work bess by summing stations to pay for better talent and staff.

>
>
One thing to keep in mind that it's easier to get audio power out of an audio amplifier if it runs off a higher voltage. And those old radios were all about driving speakers. A 9volt batter gave the higher voltage, but didn't require a bunch of AA cells that would take up far more space. (Take apart a 9v battery, and you'll find actual cells inside, sometimes small packs in plastic other times what look like smaller AAA cells.)

With recent products, they could go to a lower voltage because the products are driving headphones. So that MP3 player runs off an AAA cell because it doesn't need to provide much output power. Same with Walkman's of twenty years ago, no speakers just headphones.

Motors needed lower voltage, forty years ago we had a lousy cheap tape recorder that had a 9v batter for the amplifier and some C cells for the motor, but required more power, so Walkmans and portable CD players moved to multiple AAs.

One thing that has happened, as digital electronics has become a staple, is they've gotten better at making devices that run at lower voltages (alongside making things use less current). Which means that thirty years ago, if an MP3 player had been practical, it likely would not have been able to run off one AAA cell, but now they can.

Hi,
I have broken the battery lid of my ICF SW100, the pins at the lid,
nothing in the casing. It turns out that the lid can be removed from
the casings metal articulation without destroying anything.
Obviously the lid itself is not available as spare part, only the
comlete base part of the casing.
Since there are also topics about broken base parts, does anyone have a
spare lid for me, or has a link to where to get one.

Thanks for assistance. Dieter

Mostly history and technology. The first transistors were germanium
point junction transistors. Germanium transistors has lower charge
carrier mobility than Silicon, and higher voltage losses across the
junction than Silicon. To get significant power, and gain, these
devices needed much higher voltages. 9 Volts also allowed
manufacturers to save some money. The speaker could be connected
directly to the output stage (no transformer), something that is hard
to do with 3 volts and a class B output stage. 9 volts is the norm for
these devices into the 1970's. So almost anything you see from the
1950's and 1960's uses 9 volts.

> opposite sideband artifacts from a station 10 kHz away.

< Snip >

There are two issues here:
1. What is actually operating to the current DRM standards.
2. What can be engineered.

Regarding #1

I fail to see how replacing "heterodyne whistles" that I can normally adjust my receiver to mitigate anyway and replace that with "digital artifacts" as an improvement. In other words replacing one type of noise with another. I rationally can not accept this trade of one type of noise for another type of noise as "better."

The problem I have with DRM is that it currently is not an improvement and just provides a different listening experience not better in general.

They (the DRM consortium) claim the "possible" while providing the "actual" like it is the same thing. This is a bait and switch tactic and I'm not buying it.

Regarding #2

Can DRM be better than current analog? You bet it can!

Can you stuff more information into the same bandwidth? No!

So in order to offer "better" sound quality the signal will have to occupy more bandwidth not the same. Compression algorithms trade an increase in information rate for an amount of distortion or artifacts. I don't see any research to change this trade where you can have your

cake and eat it too.

There is the theoretical rule that a numerical sized bandwidth can support a numerical value of information rate. For a DRM signal to "sound better" it would have to overcome this rule. Compression algorithms can not violate this rule without other consequences such as sound quality.

The result is that DRM will have to use larger bandwidth than the current analog scheme to it to actually be "better." Where "better" is defined as good sounding audio without the artifacts and manage this with a weaker signal whether that weakness is due to propagation, the transmitter using less power, or both.

If broadcasters and listeners want to accept fewer available channels then this can be an eventuality but listeners must in addition accept that broadcasters will have control over who can listen and that over time broadcasters can change the rules.

****

I take the long view. The long view is freedom of information, which is a fundamental right in this country. If broadcasters are going to implement a scheme where by they control who can receive the information for whatever reason then we will have an information cast system.

This debate is just starting and it will be an issue in every delivery system be it Internet, AM/FM BCB or short wave. From the beginning to now if you bought any kind of service from an ISP you got the whole Internet. From the beginning until now if you bought a radio you got the whole of all programming it was capable of receiving. This is going to change in the future if we accept what the industries are pushing, which is a subscription model in addition to the equipment cost.

The USA understands and accepts money for access to "premium" content but there has to be a broader availability of the free content guaranteed or we will lose a part of what we are as a nation.

Lately I also have occasionally picked up WWV on 20 MHz.

The 17 MHz band has been picking up. Lately I have been getting quite a
few stations on that band around my local midnight.

Yes, that's a common scenario, with Mel Karmazin.

\

XM does some nice things with blues, actually, and here, that is to
say, satellite, getting back to a thread past, is where a national
audience can be built and a few listeners here and there become a
sizeable contingent, yes, I agree. They can also be quantized, and made
salable.

What doesn't work for radio locally, does with satellite reach.

It's also a subscription based delivery system. There is a different
model on the business side than local radio.

That's exactly right. But if you get in there with a team of hired
assassins, you can pull it off. If only at one or two stations in a
market, and only for a short period of time, in most cases. Some
formats, Country Music being one of them, where overconversion is less
difficult to achieve and maintain. But it requires a ratings independent
sales pitch, which, often, we had to do.

It's still going on today. Bonneville is the major example here. WTMX
is the cash cow. WDRV goes after the demo that WTMX can't get. Together,
they do well. Not exactly blowing holes in the dial, but they do quite
well. And everyone pays for themselves.

At CBS, we all had numbers to hit, both revenue and profit. No one
got subsidized.

And the notion that everyone pays for themselves isn't new. Tisch did
it at CBS, when he declared that the News division was to be profitable,
and put it under Entertainment.

With the spectre of HDTV on the horizon, Karmazin as much as declared
that there would be subscription based alternative services delivered
with stolen bandwidth from the HDTV main channel. An announcement that
was followed by NBC and Time Warner. This when HDTV was approved but
prior to the first implementation. Now that Karmazin is gone, there may
be different cultures in place, but the boys running the show are sharp,
and revenue enhancing opportunities are tough to pass up. Especially, as
you point out, radio or television, shares, and revenue are finite.

Absolutely. We discussed this very point a year or more ago. Quality
is a factor only when content is widely available from more than one
source. But the notion of quality is subjective. And highly personal.

>> HD Quality is, and will be, perceptual and personal. Right now, it's

Which was the situation with the Optimod. But you've worked with
more engineers than I have. You know the percentage who really do know
their stuff. Sturgeon's Law applies. 99% of them are crap.

>>

I do hope you're right. But my optimism is pretty thin, there.

Especially since, as I've pointed out here, there is little radio
serving me anymore. And I am one of it's true believers.

>> The pith, here, is this statement:

> Unless we use HD2 to develop very good regional or national concepts, those
> that will work bess by summing stations to pay for better talent and staff.

Now that has some interesting potential. To bring things nearly full
circle...with national, networked or not, channels with reach and intent
beyond the local contour.

That would be an exciting development.

>> Which is the point. Because after all, in the US, Radio is ALWAYS about
>> the money.

Are you and I supposed to agree this much? It must be the long weekend.

Meant as a compliment: I'd bet you were a great devil's advocate in business decisions, helping to make sure the ideas were well thought out. It's really challenging to discuss things with you, and it forces double checking ideas and facts. And that is fun.

Not exactly... some of the first radios with transistors in them (e.g. the Emerson 838) used a 45 volt battery. But this battery was to supply the plate B+ for the three peanut tubes in the RF/IF signal path. The transistor audio outputs ran off the 4V "A" battery which also supplied the tube heaters.

Very good propagation indeed.. took my 1105 Pocket SWR on a small
picnic by a river;

White fleecy clouds above, boat dappled river, fishermen lined up,
casting about for The Big One,
occasional frisbee floating by

- Lying sprawld on a bench in the shade, Beverage in hand, earbuds in
place, picking up Europe & The Mideast via a 7 foot random wire..

Pastoral scene, accompanied Bits of french language and strange music
rising above the static..

Later on, quite full indeed, picked up arabic chants, mideastern
music, possibly bits of
turkish ??

Gave the rest of our wine & potato chips to some Rap Guys, setting up
just as we were departing..

I love Memorial day

The batteries inside a 9 volt battery are "Quad A" or AAAA batteries,
1.5 volt. There are 6 of them inside a 9 volt case.

Sorry I missed your post. I'll make it a point to drive by the beacon
the next time I have a frame or two left on a roll. I should try the
smaller loop that seems less interference prone on that beacon in the
nearfield.

A savings of $50 is a hill-o-beans when the
radio sells for 5G anyway and is buillt inside
like a cheap VCR (most Icoms fall into this category)

> 1950's and 1960's uses 9 volts.

You are probably closest to the truth, still 9V radios lasted well
beyond the Ge age. I think it was mostly a matter of engineering. Often
when you design low voltage circuits, it takes more transistors to do
the same function as a higher voltage circuit. For instance, a resistor
might be suitable to bias a long tail pair from a 9V source, but at 4V
(the minimum of 4 secondary cells) you would probably have to go for a
transistor current source. The same goes for load transistors replacing
high value resistors. Once transistors became integrated, they became
the cheapest component on a per item basis. A bridged power amp is
cheaper than an transformer based solution.

Two AA cells occupy less volume than a 9V, but the capacity difference
is well in favor of the AA cells. I don't have the number handy, but
the difference is in multiples, not a few percent. An AA alkaline is
about 3AHr using 1.5 to 0.5V operation. Granted, that takes a DC/DC PS
to achieve the full capacity.
http://www.solarbotics.net/library/pieces/parts_elect_pass_batcomp.html
If you trust this source, they have a 9V alkaline cell at 0.595Ahr and
a AA cell at 2.85Ahr. 9*0.595=5.335 versus 3*2.85=8.55, so the ratio is
almost 2:1. That is, 2 AA cells will last twice as long as one 9V cell.

And of course, the AA cells are really cheap.

The only place a 9V cell make much sense is in a circuit where the operating current is so low that you nearly get the shelf life of the battery. Maybe a smoke detector is close to that criteria.

7433. Another Pirate on 6876 AM

One was a little girl who had been shot in the head, Susie Briones said.

"He had to carry that little girl's body," she said, "and her head was
blown off and her brain splattered on his boots."

Actually, I was just a pain in the ass.

I really had no interest in being devils'advocate. But when I didn't agree, I wasn't very quiet about it.

The GM didn't speak to me the last 4 months before I laid down my key and walked out.

Less than a month later, everything I had predicted had come to pass.

As for agreeing....you and I have agreed more than either of us wanted to admit. Usually on matters of how things work. Where we have differed is in how things COULD work.

I don't believe that Radio need be as formulaic as it has become. I understand why and how it's gotten that way. And the whole Genie/Bottle thing now applies. But I don't believe it's been necessary. And Jake Brodsky made a very interesting point...when all you have accessible to you is formula, you get to the stage where you don't expect anything else, and you come to accept it as not only the norm, but the good as well. We're now at least two generations into overresearched formulaic programming. And the public, which long bitched about the way things have gone in business that directly address and interface the public has stopped bitching. Not because they like things the way they are...but because most have not known any better, and the rest...it does them no good to complain and they know it.

Pertaining to Radio, the Jack format which cracks wise about "playing what WE want" wouldn't have flown 15 years ago because it was perceived as openly contemptuous to the listenership. 'We don't play requests, don't ask,' is not the sort of comment you'd have heard on Sebastian's KHJ. Even though requests had long since vanished from most radio, it was something that wasn't spoken. Certainly not in the snide way that Jack does it. But times have changed, and public acceptance of such things is common. "Attitude" is the norm. Even required for many stationality concepts. Even considered entertainment by a generation that has never heard the kind of personality driven radio that brought Wally Phillips, Jack Carney, Gary Owens, Lujack and Morgan to such staggering shares. It was a different time, and it was a different stage in Radio's life cycle. But it brought to bear a kind of thinking in media that at least paid some lip service to the 'serve the public interest as a public trustee' clause on the Instrument of Authority.

Today, there isn't even that.

And no one...not the public, not the broadcasters, not even the FCC... seems to care.

Fort Worth gets blown off the map by tornadoes, without so much as whistle, because the bulk of stations were unmanned, automated and voice tracked, and what was the response? Clusterwide announcements to tune to the one frequency where there was actual local coverage. Now, we're all professionals, here. Does anyone really believe that today's radio user is going to sit through hours of programming in which she/he has zero interest just on the outside chance he/she is going to hear a weather bulletin? Maybe after the storms hit. And only for a short period of time. But until that moment...sitting ducks with a sky full of shotguns.

And no one seems to be interested in a real option to such nonsense that would genuinely serve the public in time of emergency.

Not that it's that different here. CCU, for instance, took Kiss from pretty much all voicetracked to all live, and CBS radio stations are mostly live overnight here...but that's not how it is in many markets. Two companies, for which I do some contract work, still refer listeners to the news/talk station when there is severe weather in the area at night....but don't offer any way of informing listeners that it's time to make that move.

That's an obscene breach of public trust. But no one seems to care. And that's the way it is.

HD radio may be the future salvation of AM and the wall of sandbags against terrestrial radio erosion, in general, but that is far from a certainty, as you yourself have stated in this thread. And in the process, trashing the band's 'unused' spectra preventing use by anyone not interested in the local contour. Which stops being a problem when the new technology is widespread, and HD receivers are commonplace, but in the meantime, nothing says 'contempt for the listener' like wiping

out alternatives to the locals.

I live in between Milwaukee and Chicago. Even WLS doesn't come in here cleanly most days. And in a populated area like this, I'm not alone in the inability to access desired radio. But alternatives that I regularly listened to from either city are now off the dial. Wiped out in IBOC hash. My neighbors have also complained about their own choices being eliminated. Boy, if you were going to create a system that guarantees options to favor a handful of stations, IBOC sure would be the way. And it's got the blessings of the FCC.

No, I don't agree that this is the way it has to be. You and I will disagree on that point.

I understand why it's done this way, and how it got to be. And I realize that only a failure of the system to catch on with the public will really make a difference in the outcome. Because there will be no money in continuing.

But I think there would have been a better way. One that doesn't begin by trashing the band with all that interference.

And one that offers better audio than what I've heard of AM HD.

But then, as I said, I'm a pain in the ass. And a fossil that is no longer served by Radio.

What do I know. And, in the scheme of things, what does it really matter.

Gee, that sounds familiar. I wonder why.
>

> and walked out.

In my case, it helped being either a Gm or having some kind of title... and
ratings. Noisy people who create revenues are more tolerated than those who
don't. I can't tell how many times I have had to explain why engineers spend
money (Short version: shit breaks) and that when they don't. there are lots
of make-goods to run.
>
> Less than a month later, everything I had predicted had come to pass.

Bad managers fire the competent, as they are threatening. Good managers hire
department heads who are better than they are, because it makes the job
easier.

Formula radio comes when you have good research, and a bad PD. A good PD, armed with listener "advice" will make a fun station. Otherwisse, it is just a jukebox.

> And Jake Brodsky made a very interesting point...when all you have

True maybe even much of the time. But when management lets a PD be creative in everything from imaging to jocks, something way bigger happens. It's magical at times. I am watching it now woring with a very talented and intuitive PD who is doing the 13 Spanish Adult Hits stations we have launched in the last 8 months... lots of research, but the day to day operation is based on airchecking, listening to every show and jock, dreaming up fun contests, working with community groups on activities for the listeners... the stuff PDs should do if they get off their duffs. Most PDs are glorified jocks, and being a jock is not a qualification per se for being a PD... jocks are not like wine,a nd they do not become PDs automatically after a set amount of time.

> And the public, which long bitched about the way things have gone in

> and they know it.

What I see is that people want even more stratification. More niche formats. If you want proof, talk to a group of alternative rock males. Each one wants a different version of the format, and different songs. At some point, this formast will become 30 different formats and not viable on radio. I tis the listener, who has come to expect personal gratification ("hey, I can do it on my iPod, dude.) with no concern for anyone else. "That sucks" is the standard response for 99% of things in an AR listener's life.

And 40 years of mostly vacuous CHR jocks (with occasional rare exceptins) has made many wnat NO jocks at all.

All I remeber is, as a kid, being glad my market had 3 Top 40 stations as there was one that was NOT giving news at any one time. I swore I would have a station that played music, and did not interrupt for what I did not come for.

That is part of the price for giving listeners what they want. News on one staiton, music or entertainment on others. And that is why it is so important to have a working emergency system... not Conelrad, not EBS, not EAS. One that really works. the other issue is that for at least half the day, less than 10% of the populaiton is not listening, and at the best, only about 25% are. Radio is not as effective as we would like to think.
>
> And no one seems to be interested in a real option to such nonsense that

See above problem.

In the Minot debacle, which turned out not to be Clear's fault but the morons at city hall, the incident occured at about 2 AM. Now, how many local residents of Minot were litening to the raido at that our in the Dakotas? 11 would be my guess. we need self activating radios, and a good system to activate them.

I see more cooperation with local TV news departments. We do it all the time, getting backup reporters and breaking news. But we are live 24/7 on nearly every station. That is how we train talent.
>
> That's an obscene breach of public trust. But no one seems to care. And
> that's the way it is.

I am not sure the audience looks at music radio stations to do anything else. It is surprising how many actually know which statins have good news coverage and actually use them when need arises.

There is real, overwhelming evidence that there is pretty much no listening in such cases, so I don't see this as an issue or a loss.

If you look at local market coverage, you know most stations in the top 100 markets do not fully cover said markets. In other words, many should disappear. The Am band may not be savable, but that is due to the allocations based on 1946 city sizes.
>
> But then, as I said, I'm a pain in the ass. And a fossil that is no

That is one you can not pin on radio. In markets where ratings determine sales, advertisers do not want anyone over 55. So we don't program to them. No money.
>
> What do I know. And, in the scheme of things, what does it really
> matter.

You know more than 90 of today's GMs, most of whom think that creating a new sales package is more important than programming.

And IBOC AM just simulcasts the analog channel. FM sounds pretty good as it
is. Multicasting might sell some radios, but there are now a wider variety
of formats available on current radios than there were in the late 60s.

OK, fringes of the groundwave coverage, fringes of the audience, whatever. I'm sure some very small number of people are driven away from radio entirely by EM interference. A small number of people choose FM over AM for the same reason.

I just don't think the percentages are large in either case.

The complaining concerns IBOC AM. Aren't most of the current IBOC stations
FM?

>

Well, yeah. Audiophiles are listening to recordings, not broadcasts -- and
I don't think anybody has any audiophile expectations of talk stations,
anyway.

The usual IBOC complaint is about it's interference. The IBOC sound complaint comes up as a counterpoint to the claim that IBOC sound is much better than radio sound, although listeners seem to find radio sound at least tolerable.

I haven't heard demodulated IBOC so I can't comment much on the sound. I have heard digital audio from CDs to cellphones. I'll assume the IBOC sound falls somewhere in between.

You made a couple of points concerning interference which seemed
contridictary. If interference is driving signifivant numbers of people
away from radio, it's an important consideration for the public. If
interference is only effecting a very few viable stations, it's important
only to those very few stations.

Stephen,

Best AM/MW Radio -per- Cubic Inch would be the
Sangean DT-200V Portable "Pocket" Radio it is
light weight and small and eazy to carry about in
a Shirt Pocket or a Hiking/Fishing Vest for those
excursions up in the Mountains and Down in the
Valleys where the Rivers flow.

I had both ratings AND revenue. I was tolerated for 11 1/2 years. If
I'd had any sense, I would have walked out the second day, and found
someplace that was a better fit. I was offered a place across town my
first day.

But then, I never said I had a lot of sense.

Still, I left of my own accord. Rather than being shoved out a
window. A colleague says there are no good endings at radio stations.
The best you can hope for is to walk out under your own steam. I did
that. He says it's one of the few better endings.

What I learned there, and over the decades of my career was
invaluable. And a huge amount of fun, in isolated doses. Mostly I got
to pick my own assignments, and create projects for my amusement.

I was lucky in that.

Yes. I've gotten to experience that more than once. And during my

It is also, almost always short lived. Magic only lasts so long.

I am watching it now woring with a very talented and
> intuitive PD who is doing the 13 Spanish Adult Hits stations we have

Fred Moore, of KOMA fame, told me that the PD is nearly always the
worst jock on the station. With only two exceptions, in my experience,
he's been right.

No doubt. But one of the very foundations of the science of audience
measurement, and perceptual research is that the sample's behaviour
changes when the sample is aware of being watched. One of the top
reasons why you can't 'apply' to be an Arbitron diary keeper, and
instead have to be invited to be screened. Talking to a group of
alternative rock males, for instance, may actually produce different
results than when observing them unaware. As naive listening produces
results differing from direct questionnaire.

A study I did as part of a social studies class in high school asked
a randomly selected cross sectioned sample of 200 students at two
different high schools about their favorite radio stations. In both
schools, respondents described KSHE by the largest margin. More than
50%. KXOK was the number two station at the time, behind KMOX. But not
one respondent admitted listening to KXOK. KSHE was AOR. KXOK, Top 40.

But when we sent other persons out to do some naive listening in teh
cafeteria, and the subject turned to radio, many of the KSHE respondents
could describe in detail individual instances on KXOK, even quoting
remarks by some of the jocks. Two had been recent participants in Johnny
Rabbitt's phone bits.

It not only depends on how the question is asked, but, in fact, on
what's really at stake with the individual at the moment. Or the
respondent's mood. Or the phases of the moon. And while most of these
things can be compensated for to some degree, there is always the wild
card event that strikes listeners so well, despite fitting into no
established category for 'proper' quantization.

I'm familiar with the concept that results in 30 different formats requested by 25 different respondents. If you're talking about music, then to satisfy the lion's share of them, yes, you need some pretty stout research if you're going to play music alone. Probably very expensive and time consuming research, too. That's why I've always made noise about the fact that any station can play a record, and then asked what we can do to bring something fresh to the grille cloth that no other station can master. What has always come down is that those are intangibles, and not quantifiable. More than one consultant, John Lund comes to mind, has said in response that the only thing that people tune in for is the music. More, better, timelier music, and you don't need anything else. Which is nonsense. You can build that on your iPod. What can Radio do that ISN"T replicable at home? Bring THAT to the speaker, and you'll keep listeners through portions of an ABBA/Gordon Lightfoot marathon. A little of the RIGHT music and you have a monster station.

But what are those intangibles?

Well, that's a good question. Depends. You certainly can't ask your sample about them. It's the very definition of creativity that creative products are things not seen/heard before. Whether they're good...you'll know it when you encounter it. That's too much of a risk for some Manglement. But much of what's really of value in radio can't be simply asked about. But once experienced, it can be as addictive as Wally Phillips.

I had one morning guy who like to tell the GM when he'd get shot at for doing something that was off the grid, "You know...no one needs a Cadillac Eldorado, either....until they DRIVE one." Most of your listeners don't really know what they want, until they hear it. And if what they hear is pleasing enough, it may even transcend musical tastes.

When KIKX went off the air in Chicago, the GM of US99 threw a celebratory party. They had weathered a direct head-on assault and survived. Now all those listeners who left would be flocking back and US99 would have the whole lifegroup to itself. At the time about an 8 share. It was commented to him that those listeners who had left US99 had left because 1) KIKX was new and innovators and early adoptors would be gone for no more reason than that....and that after KIKX was no longer new, they would find something else. But that they would NOT be returning to US99.

And 2) the other listeners who had left had left for cause. Because they were run off. The, to would not be returning. They would find something else that entertained them. Likely talk radio.

The GM was pissed. He insisted that country music listeners would have no place else to go for country music and that they would have to return.

Well, the book came and went and the listeners did NOT return. Instead, they went to...say it with me, now....TALK RADIO. It was not what they were looking for, but the entertainment intangibles were

enough to hold an audience looking for something else.

But that's the very reason you have live personalities. They bring
something fresh, new, and hopefully exciting to every break. Remove
unpredictable intangibles, and you have what....Jack FM?

>> Pertaining to Radio, the Jack format which cracks wise about "playing

No, it's not. But it certainly can be. When I was at KWKH, if
there was a crack of thunder, listeners all over the Ark-La-Tex tuned in
to KWKH, even over and above KEEL. Why? Because in the history of KWKH,
it was THE instant news station. If something was happening...it didn't
matter what--weather, plane crash, traffic, the police chief's bribe
money was late--anything, KWKH was on it. And over the years, that
became ingrained in the marketplace. To the degree that KWKH was THE
station listeners turned to, even if they never listened to the station
at any other time. Even if they weren't listening to radio at all when
the first flash of lightening split the sky.

Radio has lost that will to live. And no emergency system is going
to bring that kind of call to action to any market. It takes time,
loyalty, unflagging service for years to build THAT kind of emergency
versicle and response.

Radio has no such inclination today. And that's one of the primary
wastes of the medium.

> activate them.

A technical solution is not the only answer. Getting people to
turn on their radios in expectation of super service is a better way.
Let a self activating radio go off at 2 in the morning, and the man who
brought it into the house had better not plan on getting laid anytime
soon. If he doesn't get to sleep in the dumpster for a while. Self
activating radios are often premptively de activated. Defeating their
purpose.

>> Not that it's that different here. CCU, for instance, took Kiss from

Good to know. And it's a step. But it's not nearly enough. Not by
a long shot.

>> That's an obscene breach of public trust. But no one seems to care. And
>> that's the way it is.
>
> I am not sure the audience looks at music radio stations to do anything
> else.

And that's where music stations need to take a leadership role.
Provide necessary service when the need arises, and screw the music
format if necessary. The truth be told, you and I both know that even a
music intensive station can pick up the mantle during heavy weather
without a great disturbance in the format.

It's Radio's obligation to do just that. Even if there are
complaints about the interruptions. It's necessary. And Radio's unique
position in a community is ripe for leadership to develop.

But, that doesnt' fit the research. Or the consultant's
recommendation. Or the formatic integrity.

Screw it. Take the leadership. Do the job. Serve. As a public
trustee. Just as the Instrument of Authority requires.

It is surprising how many actually know which statins have good news
> coverage and actually use them when need arises.

Indeed. But that's not good enough. Not by a long shot.

I have driven parts of Utah and Nevada without a freakin' cell phone
carrier let alone FM radio station. Take a trip from Ely to Vegas and
tell me how much FM you receive. Yet there are houses spattered all
along the way. There are people who live off the power grid. No phone
either. Oh yeah, well armed too.

The existing solid state worked well enough at 6V. Zenith was making shirt pocket portables in 1956 which were powered by 4AAs. The Zenith radio was expensive, but the battery replacement was cheap.

I'll guess the reason most of the 1950s transistor radios started used 9V batteries is because the lower price manufacturers wanted to get by with the cheapest transistors which would do the job.

I suppose it's also possible the battery manufacturers were giving the low end transistor radio manufacturers free batteries in order to later sell short life, high profit replacement batteries.

As a side issue, many of the cheap American small transistor radios of the fifties and early sixties used a cylinderical battery which contained a stack of six round 1.5V cells. The Japanese companies prefered the now familiar rectangular battery which had a stack of 6 rectangular cells, much like the cells used in the B batteries of vacuum tube portables. Both of the 9V batteries were lousy batteries and it's unfortunate that either became the standard for transistor radios.

Point contact transistors were never used in consumer transistor radios.
The earliest radios used germanium junction transistors.

The typical voltage drop across a germanium junction is about a quarter
volt. A silicon junction drops from a half to three quarter volts.

> 9 Volts also allowed
> manufacturers to save some money. The speaker could be connected
> directly to the output stage (no transformer), something that is hard
> to do with 3 volts and a class B output stage.

The early transistor radios used transformer output stages. Push-pull
output stages were the rule, driven by an phase split interstage
transformer.

>9 volts is the norm for
> these devices into the 1970's. So almost anything you see from the

Contact Sony in your area. In my experience they stock parts for at
least 20 years.

7453. WHY I liek beer enemas

enematips.com explians howto get real drunk the way wisemen an I do.

"Beer or wine can be used, you will want them to be warm. Surprisingly
you will get quite drunk. Possibly you will be dangerously drunk so
you should be careful. It is a good idea to mix wine at half-strength
the first time you use alcohol in an enema.

"Alcohol is absorbed much more quickly in the intestines than in the
stomach, so you need to be really careful.

"Using hard alcohol is NOT A GOOD IDEA. You can die from this.

"It might be worth a mention that mixing drugs (alcohol in this case)
and strange medical procedures can be a bad idea. "

yes it was awful OTOH your very title shows you have unreasonable and
down right irrational expectation of people

it seems clear if the "facts" as reported bear out somebody blew it,
and In america someone will be held respoible for the breach of
displine I supose youd like that to the president the next thereis a
police action shooting in LA

and of course no repsoniblity in your mind goes to the folks that set
off the bomb at the convoy in the first place. Indeed they set it off
to get much that result as well as to kill a few americans butof course
american armed forces are supoosed to be prefect

Or yours, Lardass the dropout:

Billy "Dumbass who can't put together a sentence" Smith shows off those
English skills, quite ironically in
<VfQHf.14581$rH5.8121@newsread2.news.atl.earthlink.net>:
"That's interesting there idiot. I bet you really did flunk high school
math and probably elementary too. Oh thats right, wasn't that when was
in
Floriduh. Spelled Florida but the DUH is for your Dumb Ass."

"wasn't that when was in Floriduh" - Billy makes good fuck up!

Billy "shoots" himself in his palsied club foot once again in
Message-ID <Q0bJf.19641$vU2.7735@newsread3.news.atl.earthlink.net>:
"Roger, shots himself in the foot"

Billy the illiterate retard Smith screws up again, and his illiteracy
is exposed. "It serves him right."
in<hauKf.1410$S25.940@newsread1.news.atl.earthlink.net>:
"Deserves him right."

Billy "retard" Smith confesses to his generally accepted retarded
status in <LwpLf.2321$F56.2317@newsread3.news.atl.earthlink.net>:
"I'm a general retard. bwhahaha"

Billy "spelling champ of the general retards" Smith admits his bad
hygiene but is still in denial about his English skills in
<QxpLf.2322$F56.1169@newsread3.news.atl.earthlink.net>
"Sure I can spell and smell."

"Billy" the NOtwordSmith fucks up again with this incompete sentence in
<qgyNf.5576$S25.341@newsread1.news.atl.earthlink.net>:
"So when you got divorced boy, did your finally figure out that your
more"

Billy "cumgargler" Smith managed to awaken from his drunken stupor to
slobber
in <fbIOf.442$sL2.25@newsread2.news.atl.earthlink.net>:
"Isn't that you mom weighed"

Mr."Education" Billy Smith steps on his own dick again when he talks
about others' "educations" (or educatiion" as he spells it) in
<w7IOf.436$sL2.167@newsread2.news.atl.earthlink.net>:
"Uh, huh. Right LOSER. Still smoking that dope again? By the way how is
your
so called educatiion actually doing for you? Those online classes."

Billy Smith shows off his Pulitzer Prize writing skills in
<B9IOf.439$sL2.255@newsread2.news.atl.earthlink.net>:
"You're whole life has been exhaled before."

Billy "illiterate retard" Smith spikes the "HUH?" factor in this
slobbering in
<MGqUf.16833$S25.8455@newsread1.news.atl.earthlink.net>:
"Come on, do it just have you some spiked Kool Aid."

"Didn't" your special-Ed teacher teach you how to spell, Billy?
in <OCqUf.16826$S25.10695@newsread1.news.atl.earthlink.net>:
"...didnt Marie teach you to play nice"

"Rhodes scholar" Billy Lardass Davies Smith blunders and blows his
cover again in <Et%0g.6340$sq5.1769@newsread2.news.atl.earthlink.net>:
"Rhode's scholar Scheissman blows his cover again."

Billy "dumbass" Smith steps on his own tiny dick when he tries to
criticize others' typos,but he doesn't "perform" well as usual with his
blatant "stupidity" in
<oCk1g.5958$Es3.3907@newsread3.news.atl.earthlink.net>:
"Noteed!!!!!!!!!!!!! Bwhahahahahahah. You're a brilliant one
Scheissman.

You even peform stupid acts on your blatant stupidty"

Billy "dropout Lardass" Smith steps on his own dick when he tries to comment on others' spelling abilities, but he "can't" do any better in Message-ID: <mQr3g.8970$sq5.4914@newsread2.news.atl.earthlink.net>: "Woger cant spell very well anyway."

They will be left in the dust. I suppose those who don't have a
computer or don't trust online transactions could try setting up an
ether-based net using morse code. I suspect that it will be largely
one-way communications though.

Yup. I was in such an area this weekend. Schoharie County (Howe Caves, Cobleskill, that area) in northern New York. There are a couple of FM stations - all music (plus a couple religoius) formats. No news on those. You get some bits and pieces of Fly 92 and WGNA-FM from the Capital District.

As far as AM, there's a couple local daytimers - the big one being WSDE-1190 (a local full-service station) and then there's WGY AM 81 out of Schenectady. All WGY does as far as information is a few seconds of Fox News Radio at the top of the hour and some Capital District news done locally. Most of that thing is network-delivered talk, though: Rush Limbaugh, Sean Hannity, Phil Hendrie, Mike Savage, etc.

At night, the sundowners (WSDE among them) dump carrier and go off the air; and the dial comes alive. If you want news on the radio you can catch WCBS-88 and WINS-1010 and WBBR-1130 from New York City solid.

You pretty much have no choice but to listen to long distance radio in the rural areas.

I had forgotten what it was like - I used to love listening in to long-distance radio as a teenager. It's going to be a disaster when the whole dial is covered by buzzing hash, though.

Man made interference is the issue today, not between stations... the
inter-station issues have existed for decades.

The issue, though, is double. Is the content from Manhattan of any interest?
And, more than that, you have to wait till night time. Hardly anyone listens
to any radio at night (less than a third of daytime levels) and even less to
AM. hose signals may be available, but not used as there is no demand.

Eric,

What sort of rumblings have you heard? I do remember my first one flaking out on its FM tuner. It was still under warranty (almost a month before expiring) and I sent it to Tivoli.

They sent a new radio. That was about three or four years ago. It's been OK, so far.

I do remember the switches on the first generation radios were a bit stiff.

Apparently they are using a different type of switch because this one doesn't require so much wrist-twisting.

I have a strange resum&#65533;. It started years ago as a project to learn Page Maker 1.0 (long ago) and I made a biographical, illustrated resume that is about 60 pages long. A number of people said it was extreme, improper, egotistical (me?) and such. But a close friend who is also successful in radio said, "anyone you want to work for will like it. Anyone you would hate will not. Consider it a filter."
>
> What I learned there, and over the decades of my career was invaluable.
> And a huge amount of fun, in isolated doses. Mostly I got to pick my own
> assignments, and create projects for my amusement.
>
> I was lucky in that.

I was lucky at the beginning. When I realized I was a lousy jock, I knew I wanted t be a PD. But there were not many openings for 16-year-old PDs. The only way was to won the station, something I did in Ecuador. I got to do whatever I wanted. Fortunately, I somehow made money, too.

Interestingly, I did, intuititvely, very mainstream formats. The exception was my "homage to FM" which was the first FM in northern South America, run non-commercial for my own enjoyment (I started in FM in 1959). It ended up being my biggest money maker, with just 6 20" spots an hour, one very 10 minutes.

Unfortunately, most lone owners I came across were real pieces of work, and the stories of the owner's wife requesting songs be played out of format are legion... and mostly true.

It is really tough for me to say that consolidation and bean counters is worse than crazy owners, no insurance and whimsical firing policies.

> It is also, almost always short lived. Magic only lasts so long.

I have seen the magic work for longer times. Gorman at WMMS. Tanner at Y 100. And many more. But they are few compared to the sheer number of statins in the US. But, then again, it is hard to create these outside the larger markets or the very dominant facilities in medium ones. It is hard to envision such a creature in Ispeming or Show Low or Pampa. There are very few WLNG's in small markets that are really great stations. Docket 80-90 killed about 75% of the ones that did exist, too.
>
> Fred Moore, of KOMA fame, told me that the PD is nearly always the worst
> jock on the station. With only two exceptions, in my experience, he's been
> right.

I know some... Bill Tanner again comes to mind. And the PD of our Recuerdo stations is also the highest rated talent on the LA station... but these are very rare exception. Another axiom I have come to believe is that people who know too much about the music are way to analyitical about it. I had one PD who excluded songs because he had perfect pitch and thus would not play songs with sour notes... even if they were #1. Give me a radio geek any day... someone who lives in awe of radio and is thrilled to be allowed in the front door! Such PDs hear the station in their heads like a listener, not like a dork behind a desk.

> questionnaire.

This is why I do not do focus groups. Focus groups, as a researcher in Puerto Rico I respect said, are "a party without the booze." An alpha male or a female gossip takes over... always. And you gett all kinds of group dymnamics. Focus groups were designed for managers, not the people who build the widgets. An hour, and you know everything.

I do one on one interviews, with each person alone for 45 minutes to an hour, in a controlled, neutral environment with an interviewer who is not a peer... and who specifies they are from out of town and don't know anything about any station, artist or whatever. This significantly removes the noxious components, and is further helped by recruiting people based on having them reconstruct last week's listening, not based on "favorite station or show." The ones that exhibit the right behaviour are recruited.

Also, we have to keep in mind that we are not researching listeners. We are researching potential diarykeepers so we emulate Arbitron recruit characteristics. It's reality. When Pulse went door to door, I did research door to door!

> A study I did as part of a social studies class in high school asked a

> the number two station at the time, behind KMOX. But not one respondent
> admitted listening to KXOK. KSHE was AOR. KXOK, Top 40.

The environment... at schoool... introduces significant bias. That was a defintely faulty sample design as being at school conditions all responses.

> But when we sent other persons out to do some naive listening in teh
> cafeteria, and the subject turned to radio, many of the KSHE respondents
> could describe in detail individual instances on KXOK, even quoting
> remarks by some of the jocks. Two had been recent participants in Johnny
> Rabbitt's phone bits.

And if you did it on the street, on the phone or at athe mall, you would get even clearer indications of reality.

My favorite story...

When I got to Puerto Rico in 1970, the survey company did in home conincidentals. Two questions: radio on? What station? I went out with the field crew and we were in anewer, very upper middle class neighborhood. Down the street, we heard a radio blaring the station that broadcasters called "the washerwoman's station" meaning it was very downscale and vulgar. We got to the house. Ask the questions, please. The woman said, "WIPR" which was the San Juan equivalent of NPR... classical and talk. Right. She was responding like she thought residents of the neighborhood should, not as she actually did.

In most research that is well designed, you ask some questions that will identify lemon participants. When you check data, you eliminate these as they did not behave as they said they did. Out.
>
> It not only depends on how the question is asked, but, in fact, on

> established category for 'proper' quantization.

The problem is that most listeners are very mainstream, and you can run an electronic "EKG" on music and spot where new songs are in a sample by the enormous dip in score. Every time. There is a very limited passion for innovation, but a big one for renovation. Freshening, not rebuilding.
>
> I'm familiar with the concept that results in 30 different formats

> time consuming research, too.

Most formats are pretty monolithic. And you can do factor and cluster analysis to see how far out you can go without losing listeners, and see subsets of your own listeners and schedule music so sets of sngs that are "bad" to one group do not play back to back. The problem is where you have young males who listen in black and white: i love it or I hate it. No degrees. You either embrace it or flip it the bird. Know any 23 year old males that act that way?

> That's why I've always made noise about the fact that any station can play
> a record, and then asked what we can do to bring something fresh to the
> grille cloth that no other station can master. What has always come down
> is that those are intangibles, and not quantifiable.

It is the glue that sticks it together. The talent, the imaging, the spot load, and, especially, the mix of the songs. I can take 10 top scoring songs, and mix them so they score very high as a mix, or very low... just by optimizing or destroying the song to song flow. Many PDs think Selector is intelligent and will program the music for them. Wrong.

>More than one consultant, John Lund comes to mind, has said in response
>that the only thing that people tune in for is the music. More, better,
>timelier music, and you don't need anything else. Which is nonsense. You

>of an ABBA/Gordon Lightfoot marathon. A little of the RIGHT music and you
>have a monster station.

I say that on music stations, it is the ability to create a better blend, and package it nicely. In other words, a better flow of music than an iPod on shuffle. Since most iPod onwers have only around 300 songs, radio can compete if done nicely.

>
> But what are those intangibles?
>

> asked about. But once experienced, it can be as addictive as Wally
> Phillips.

I agree. I do not research creativity except to get an idea of what worked
and what did not. The talent has to take that data and process it... the
research or the listener can not. This is where the good PD working to
orchestrate a staff comes in. Of course, if you are voice tracking or
automated, this will never work. It is ajuke box with an antenna.
>
> Well, the book came and went and the listeners did NOT return.
> Instead, they went to...say it with me, now....TALK RADIO. It was not
> what they were looking for, but the entertainment intangibles were enough
> to hold an audience looking for something else.

Dumb GM. There are hundreds and hundreds of documented cases of "more
stations in format create higher total shares" and "station leaving format
reduces total format shares" and there are no exceptions.
>
> But that's the very reason you have live personalities. They bring
> something fresh, new, and hopefully exciting to every break. Remove
> unpredictable intangibles, and you have what....Jack FM?

Yet some are so burned with jocks they want Jack. For a while. I have seen
this in one market for years. Two similar stations, one personality, other
jsut music. For a decade, nearly tied. Listeners to the music station did
not want personality. Today, the music is not as good, so the personality
station wins. But there is a component who says, "shut up and play the
music." Often, a big one.
>>
>> And 40 years of mostly vacuous CHR jocks (with occasional rare exceptins)
>> has made many wnat NO jocks at all.
>>
>
> So they will tell you. Until they hear a good one. Admittedly rare. Very
> rare, indeed. But, then no one needs a Cadillac Eldorado, until you drive
> one.

As mentioned, I have seen a marvelous personality station tied by a totally
neutral music station... playing the same songs, nearly. Talent is
polarizing, and some listeners do not want talk... they are there for songs.

>> All I remeber is, as a kid, being glad my market had 3 Top 40 stations as

Still, considering that at peak hours 3 out of 4 people are not listening to the radio, I just do not think the current system is very good. And at off hours, it can be less than one in 20.

>> That is part of the price for giving listeners what they want. News on

> flash of lightening split the sky.

There still are a bunch of good AMs in this regard. The problem is that most folks under 35 don't use AM, and may not even know what it is. FM can not get the fringe coverage of a big AM... and many parts of the US, including the nation's capitol, have no big AMs. We have a defective system of allocations for AM to be effective, and FMs are usually pretty limited in coverage.

> A technical solution is not the only answer. Getting people to turn
> on their radios in expectation of super service is a better way.

Just as newspaper readership is down, and TV news is about Paris Hilton rather than the Summit in Paris, France, there is a dumbing down of America that makes American Idol be considered a cultural event. I thik this is far more than a radio problem. I took my youngest daughter out of an LA public school because she was not learning anthing solid in the things I though important, like reading and the ability to write an original thought and how to do math without a calculator. Same problem, different manifestation (she went to a private school in Puerto Rico, where half the classes were in English, half in Spanish and Freench was taught as a foreign language. She can actually talk intelligently now).

> Let a self activating radio go off at 2 in the morning, and the man who

What is the difference between this and a system of alert sirens, as was
common for tornados in rural America in the past? Today, we sleep with
windos closed and the AC or heat on, so we can not hear sirens...
>
>

> intensive station can pick up the mantle during heavy weather without a
> great disturbance in the format.

In a major hurricane in PR some years ago, I took my music FM to simulcast
the AM non-stop coverage of the storm. Ratings showed that we lost virtually
all the audience. Everyone who wanted storm news went to the several
established news specialists, and the music stations that kept format kept
ratings. I had miscalculated, and it took half a year to recover. I should
have remembered that a Hurricane Kit in PR is a bunch of candles and 4 cases
of beer... and realized that listeners saw the storms as a way to not have
to work and have a party. I did not provide the party music, and did no good
anyway.

I have similar anecdotes about earthquakes, floods, and even plagues of
locusts (OK, no locust stories... that was Moses).

> Screw it. Take the leadership. Do the job. Serve. As a public trustee.
> Just as the Instrument of Authority requires.

See my comments on education and awarenss. There is just not an interest,
and among those who have an interest, there is a well established well.
Digging new and shallow wells does not help.

Eventually, the companies that are sales driven will realize it is a lot
easier to sell the #1 station than the #15 one. I learned that at about age
17, so I put product first. Most managers see it as an expense.

7485. Re: Why 9-volt batteries?

Newsgroup: rec.radio.shortwave
Date: 2006-05-30 18:34:46 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1149014086.729209.11470@i39g2000cwa.googlegroups.com>
Source record: 76643

Hello.

I always had a "soft spot" in my heart for the rectangular 9-volt batteries as these were the norm when I got my first transistor radio - a Realtone 6-transistor - which I thought was the absolute "cat's meow" at the time. I used to go riding on my bicycle all over the place and I always took this radio with me. I just couldn't imagine anything better than to have a radio on my bike!*

The 9-volt batteries were very inexpensive. The Pep Boys, a local auto parts store, sold them for 5 cents apiece! Later on, Radio Shack would GIVE them away - you brought your "Radio Shack Battery Card" into the store once a month and you could have one free battery of any of the common sizes - AA, C, D, or 9-volt. As it took TWO months to get two free AA's but only ONE month to get a free 9-volt, I always favored 9-volt-powered radios.

Today, I have two pocket AM-FM portables still in use - a Panasonic Model RF-521, purchased sometime in the 1990s, which uses two AA batteries, and a General Electric Model 7-2582D, purchased in the 1980s, and which uses the 9-volt battery. Both radios perform equally regarding sensitivity, selectivity, and so forth, but the GE, being slightly larger, has noticeably better sound quality.

Nowadays of course the 9-volt batteries are far more costly than two AA batteries, though, in these radios, they seem to give equal length of service.

I do not know if any radios are still being manufactured using 9-volt batteries as their power supply.

I just still have my (irrational) "soft spot" for that battery!

Best,

Joe

*Today I use a Sony ICF-SW35, normally kept in my car, when I go bike riding. I STILL can't imagine anything better than having a radio on my bike!

FD,

"I suppose it's also possible the battery manufacturers were giving
the low end transistor radio manufacturers free batteries in order to
later sell short life, high profit replacement batteries."

Sounds like the early Smoke Detectors with thier Odd Voltage
and Big Odd Size Batterys that some times cost more then
the Smoke Detector did when new.

"The Japanese companies prefered the now familiar rectangular
battery which had a stack of 6 rectangular cells,"

This is what I remember from the 50s/60s a stack of Six Waffers
about 3/16" Thick {Rectanglar Cells} inside the 9 Volt Batteries
of that time.

>The only place a 9V cell make much sense is in a circuit where the operating current is so low that you nearly get the shelf life of the battery. Maybe a smoke detector is close to that criteria.<

I have a number of devices related to amateur astronomy that use the 9V battery.

1. Red LED flashilight.
2. Telrad 1x finder device, also uses a LED
3. Equatorial platform driven by stepper motor

All work very well, and the lifetime of an alkaline 9V cell in these applications is typically at least a year, sometimes far more. The stepper motor that easily rotates a 160-pound telescope is the most amazing one to me.

For One and All,

Up for your consideration is the simple fact that up until now
the USA and "The World as a whole has had a uniform general
Standard of {Common Reality} of an Analog AM/MW Radio Band;
an FM Radio Band and Shortwave Radio Bands. This allowed
a World-Wide-Commonality at least in some Radio/Receiver
Circuitry.

Does the Digital Radio Future Offer the same opportunity for a
World-Wide-Commonality in some Radio/Receiver Circuitry.

WHAT ABOUT - AM / FM DIGITAL RADIO ?

Will the be a unique Digital Radio Design for AM/FM Radios
built for sale in the USA ?

And a completely different Digital Radio Design for AM/FM Radios
built for sale in The-Rest-of-the-World ?

Will Digital AM/FM Radios sold in Mexico and Canada be using
the USA Digital Strandards or the Univeral Standard of The-Rest-
of-the-World ? Will Americans have to have a Second Radio to
Listen to Digital Radio Transmissions from The-Rest-of-the-World
including Mexico and Canada ?

What is the Canadian AM/FM Digital Radio Standard ?

What is the Mexican AM/FM Digital Radio Standard ?

What is the European AM/FM Digital Radio Standard ?
- - - Who Will Africa Follow ?

What is the Japanese & Korean AM/FM Digital Radio Standard ?
- - - What Will The Rest of Asia Do ?

What will become of the standard 'portable' AM / FM Shortwave Radio ?

WHAT ABOUT - DIGITAL RADIO MONDIALE (DRM) ? ? ?

With Respect To - Digital Radio Mondiale (DRM) will the next
generation of built for sale in the USA AM/FM Shortwave Radios
have DRM as part of their built-in Circuitry ?
About - Digital Radio Mondiale (DRM)
DRM => http://www.drm.org/.

Or in the future, will their be a new breed of Stand-Along Shortwave
Radio/Receivers that are "Shortwave Only" with built-in DRM Circuitry ?

About - Digital Radio Mondiale (DRM)
DRM => http://www.drm.org/.

GOING DIGITAL - Seems to be many paths headed-off in many
National {USA} or Regional {Europe} directions where the World
Wide Radio Listener is that last consideration [.]

Well, I would care.

I like to travel OUTSIDE the continental US. And when I travel, I always take my portable radio.

So what am I going to do? Have to spring a few hundred of dollars for a "multi-standard" digital radio (like some people do with TV sets already)? Or buy a receiver designed for Korea, Japan, Africa, Europe, etc.?

Already, the DAB sets sold in the UK won't work in other parts of the world that use DAB. Forget about the USA - this place won't even contemplate opening up that stretch of the band.

Just leave LW/MW/SW/FM as it is. Please?

Isn't it bad enough the Eastern European countries and Japan both use different FM bands (what we'd consider TV channels 2 through 6)???? :(

That's true. Ever look at the latest car radios? So many buttons and flashing lights it's a miracle you can even turn them on without smashing into a tree.

It's impossible to find an AM/FM car radio with honest-to-god knobs....and a dial pointer. Sure you have the cheap crap "Pyramid" things, but good luck trying to get one of those to do anything.

It's also weird to see how companies like Sony and Panasonic have virtually dropped their regular stand-alone radios (AM and AM-FM) in the USA market, but they continue to sell such things in Europe and in their own home-turf, Japan.

No, but there is a de facto acceptance in the industry of HD. Nearly 800
major market stations are now in HD, and there are contracts for about
another 500.

Keep in mind that 60% of the US 12+ population is in the top 50 metros, and
that is where HD is being deployed with vigor.
>
> And a completely different Digital Radio Design for AM/FM Radios

Some countries have endorsed or activated Eureka, with limited success.

> What is the Canadian AM/FM Digital Radio Standard ?

Eureka. They are on the air, with scant listening and scnt receiver sales.
>
> What is the Mexican AM/FM Digital Radio Standard ?

HD. On air, but not officially approved. Brasil has approved, and has
several on air. So does the Philippines and several other countries.
>
> What is the European AM/FM Digital Radio Standard ?
> - - - Who Will Africa Follow ?

Eureka in most places that have a standard. Africa is just developing
widespread commercial radio and FM in the alst 10 to 15 years. In most
places, a Eureka radio is more than a month's wages.
>
> What is the Japanese & Korean AM/FM Digital Radio Standard ?
> - - - What Will The Rest of Asia Do ?

HD making some inroads.
>
> What will become of the standard 'portable' AM / FM Shortwave Radio ?

There is no HD portable yet. Power consumption in the DAC is the issue, but
they are making progress. As to SW, there are less and less of these being
offered in most parts of the world.
>
>
> WHAT ABOUT - DIGITAL RADIO MONDIALE (DRM) ? ? ?

It is not backwards compatible. It sounds great, though. For US AM, it would
mean stations would be making a choice to start from zero, and losing all
reveneue. The FCC is not issuing DRM permits. They do issue HD permits
(actually, all you have to do is notify, just like stereo at the beginning.)

When I built the first FM in Ecuador in '66, I applied and was granted about
12 licenses in a number of cities. I put all between 92 and 99 mHz, as every
radio in existence in the country then, whether Japanese, German or
American, covered that part of the band.

I don't have a dial pointer, but my radio in an Infinity FX has a knob that tunes up and down, just like an HQ 180! I do not need to use the scan and seek buttons that I find often skip the stations I want to hear. There are still a few, and I have not checked the aftermarket models for a while.

I will admit,

Last week I had a chance to listen to Tom Ray's IBOC car radio (He's the C-E at WOR-Radio 710 New York) and it sounded quite fine in that environment.

The signal also seemed steady as we rolled around, from the sneak looks I gave to the tuning indicator as we chatted. But then again we were in the swamps of New Jersey, where all the New York City AM stations have their towers.

I couldn't pay much attention since we were talking and the radio was playing in the background at a lower volume, but it did sound a lot better than WOR's analog audio.

Does IBOC sound better than current analog AM? Yes.

Would it be the saviour of AM radio? No, and I'll tell you why. Too many analog radios in use. Billions probably.

People will be using those radios for a long time to come. Hell, some people are still listening on radios that are 50-60 years old! At night, it's going to be nasty when these listeners (at least the ones in the hinterlands) try to tune in a long distance station, because all their locals are off-air, and can't get anything but hiss and hash.

IBOC-FM does seem like a nice thing though. There's no interference caused to the analog signal like there is on AM; and you can get a couple more channels of acceptable fidelity.

Sure you get the 67 and 92 khz subcarriers on analog FM (plus RDS), but the SCAs sound nasty. I should know. I listen to quite a lot of SCA stations in this city.

The problem with digital broadcasting of any kind is that you won't get an imperfect signal that's still listenable/watchable.

Either you get a good picture/sound or you get NOTHING. There's no middle ground.

And there's way too many people that are in that middle-ground area that are going to be dumped out. Especially when it comes to stations

with niche programming, it's going to chop up their audience numbers
quite a bit.

Yup. And by then, it was too late for AM Stereo. When did the FCC do
that final ruling on C-QUAM?

Was it in early 2000s? By then I had given up on AM Stereo as the
local MW stations dropped the system one-by-one. Last one to go was
WFAN-AM 660, I believe, when the AM Stereo exciter burned out.

My little Sony AM Stereo walkman was languishing in its box until I
gave it away a couple years ago. I don't miss it.

Early domestic-market Western European FM radios would cover 88 - 100.
Then the band was stretched to 104 in the 60s. In the late 1970s/
early 1980s, the band was stretched out to its current 108 MHz.

True export models would cover the entire FM band 88-108. Any radio
that only covered the 88-100 or 88-104 bands seen in the Americas were
brought over by immigrants.

Domestic Japanese-market radios cover the FM band from 76 to 91. I
should know, I have a couple Japanese-market FM radios. The band
between 91 and 108 is used for VHF TV audio channels 1, 2 and 3.

Eastern-European/Russian FM radios cover the 66-74 megahertz band.
That would be what we use for TV audio for Channel 2, 3 and 4.

Using a Japanese radio, you can pick up USA TV audio channels 5 and 6.

The European radios in Ecuador, which were the majority in 1966, were known brands like Telefunken and Grundig. Since there were no FM stations, there were only about 16, 000 of them then. Almost all were 88 to 100 MHz, including theone in my home. Most were consoles, with a record changer and all... in a credenza sized piece of furniture that, then, cost about $500 or more.

The export ones in LAtin America must have been ones intended for other markets, as they were 76 to 100. Not many of them, though.
>
> Eastern-European/Russian FM radios cover the 66-74 megahertz band.

Never saw one of these, although the Czechs often tried to sell me transmitters full of Svetlanas.
>
> Using a Japanese radio, you can pick up USA TV audio channels 5 and 6.

A friend did some consulting for J-Wave, an FM in Tokyo. They gave him a radio. It tunes the non-com band nicely, of course.

RHF wrote:
> For One and All,

I really only care about AM DXing; from what I have read about IBOC digital radio, is that the digital part is transmitted as both sidebands, so it really does affect the analog transmission, except for adjacent channel interference, because there is more energy put into the sidebands. I believe, that digital transmissions do not carry, as far as analog, so in the case of a pure digital receiver, it will still pick up the analog transmissions, once the digital sidebands fade. We should be able to use our analog receivers, even though stations are transmitting in digital, as many of them already are, for example, 700 WLW.

Most of the few vintage FM radios I saw in Colombia were all 88-108.
But those were mostly all transistorized. All the tube radios I saw
there were MW/SW only. I brought back two, a huge Grundig and a
smaller Philco-Tropic made in the UK.

My grandmother has her 1940s Philips MW/SW set.

As you said, German and Dutch brands ruled.

> The export ones in LAtin America must have been ones intended for other
> markets, as they were 76 to 100. Not many of them, though.

I remember seeing a couple Japanaese AM/FMs in a pawn shop. They were
88-108, but these were from the 1970s. Wayy too beat-up and battered
for my taste, so I didn't get them.

But then Ecuador and Colombia are two very different animals. I'm
pretty sure that Colombia got into the FM game much earlier than
Ecuador - at least in the major cities like Bogota (now-departed HJCK,
for instance).

Most Japanese analog-tuned portables cover 76-108 anyway, so that their
owners can take the radios outside the country and have them work. In
Japan they're marketed as FM/TV.

It's a different ball game with the digital units and home/car stereos,
though. Once again, this is just from the ones I've seen and played
with.

Here is an old Polish FM radio (not mine, unfortunately):

http://www.astercity.net/~janekr/1.jpg

> A friend did some consulting for J-Wave, an FM in Tokyo. They gave him a
> radio. It tunes the non-com band nicely, of course.

Oh yeah, that's about the only FM radio you can pick up with them.
Here's an OLD Sanyo add-on tuner made for the Japanese market:

http://radiomann.hp.infoseek.co.jp/HomePageRadio/GRP2/F109s-sanyoSFT1.JPG

and an old Pioneer table-top radio (FM only, and the dial knob is
missing)

http://radiomann.hp.infoseek.co.jp/HomePageRadio/GRP2/F6-Pioniaf.JPG

Hope he still has it. Foreign-market electronics can be a cool thing,
well....if you're a nut-case like me and collect radios.... but that's
a whole different story. :)

Does anyone have any reviews on this radio?

I have seen some negative comments on it but the word around Radio Shack was it was a good radio and it FLEW off the shelves at the closeout price.

If it was a bad radio, it would still be there.

Thanks

TMT

M... "I was thinking maybe I can find some coax that will
fit tightly in copper pipe so that I could use a shield.
- - - Do you think that would help the null?"

Spacing - Copper Pipe Shielded Coax Cable Loop Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9878

Take a chunk of the Coax Cable and the Copper Pipe
and go down to a Home Depot, Lowes, ACE or OSH.

Find one or may be two sizes of Clear Plastic Tubing or
Clear Hose used for Refrigerators and Air Conditioners
that will fit around the Coax Cable and inside the Cooper
Pipe. Note - Do Not Use the Black and Colored Hoses.

As-an-Alternative - Take some Masking Tape {Plain Paper
Tape} [Do Not Use Silver Duct Tape] and Tape it around
the Coax Cable every Six Inches (6") to act as a "Spacer"
between the Coax Cable and the Copper Pipe.

1 - Having a 'uniform' "Spacing" between the Coax
Cable and the Copper Pipe will improve the Peak-and-Null
performance of the Loop Antenna.

2 - Plus having a 'uniform' "Spacing" between the
Coax Cable and the Copper Pipe will make the day-to-day
results from the Loop Antenna more consistent since
the Coax Cable will not be moving about inside the
Copper Pipe as the Loop Antenna is moved about in
Travel.

IMHO - "In Theory" -This is... Just Plain Common Sense :o}

hope this helps - iane ~ RHF

DE,

But now imagine in 2006 doing the same thing - Impossible !

With each of these made-for the Japanese, German and
American Radio Market radios had a different Digital Audio
Broadcast (DAB) Standard ! ! !

Do you now Broadcast (Transmit) in each of the
Multi-Standards so that all Radios will work ? ? ?
-Or- Do you Broadcast (Transmit) using one standard
and miss some of your potential Listeners who have
Radios that can not receive your type of Digital Signal.

For Digital Audio Broadcasting (DAB) to work World Wide
there needs to be a 'uniform' World Wide Standard for
all Transmitters and Receivers. Unless the intent is to
Nationalize and Regionalize Radio Listening and therefore
Eliminate International {Trans-Regional} Radio Listening.

As bad as Digital Radio Mondiale (DRM) may be . . .
At least it is a World Wide Standard and may be in time
technology will evolve that will enable the reduction of
out-of-channel digital artifacts.

Why Is . . . Digital Radio needed below 30 MHz ?
WHY DRM => http://www.drm.org/system/whydigital.php
DRM TECH => http://www.drm.org/system/technicalaspect.php
DRM is the world's only, open standard digital radio system
for Short-Wave, AM/Medium-Wave and Long-Wave.
DRM has been endorsed by the ITU, IEC and ETSI.

IMHO - DRM should be the 'uniform' World Wide
Standard for all DAB below 30 MHz and a 'uniform'
World Wide Standard implemented for FM Band
Digital Audio Broadcasting (DAB) World Wide.

Then for good-or-bad at least there would be a new
World Wide "Standard" 'portable' AM / FM Shortwave
Radio that would be available for all Radio Listeners
around the World. And future Shortwave Receivers

hey - it's just one radio listener's opinion ~ RHF

Source record: 76722

DE,

For 'my' "First" Digital AM/MW Radio.

I think the first Manufacture to come out with an
IBOC AM/FM Radio Plug-an-Play Module for a
Home Computer under $100 will be my first
IBOC Radio purchase.

Having IBOC "Local Only" AM/FM Radio Stations
at the Computer for 'passive' Radio Listening while
I am thinking and working on something else may
be a good use of the both the Time and theMoney.

SO - IS THERE ANY IBOC AM / FM RADIOS OUT-THERE ?
- THAT ARE PLUG-AND-PLAY FOR THE PC ?

IMHO - This more than a stand-a-lone IBOC AM /FM Radio
would Open-Up all the IBOC Improved Audio Sound and
Related Text and Image Features to a greater number of
'potential' AM /FM Radio Listeners who more than not are
Early Adapters and who represent the future of Digital Radio
Broadcasting (DAB).

CURRENTLY ? -OR- PLANNED FOR THE FUTURE ?

i want to know ~ RHF

I learned that same trick from a GM across town when I was at
KEEL. He wasn't interested in hiring me, but he sure as hell wanted me
out of the market. So he gave me a list of recommendations, and several
tricks to filter out the goofs from the gold.

Sometimes they worked. Sometimes they didn't

That's one of the points I've always tried to make when taking to jocks, production guys, engineers....If you don't hear it in your head, you CAN"T hear it out of the speaker. You have to have an end product in mind. John Lennon could go into a studio and spontaneously generate new sounds by pulling a random lever. I've not worked with any John Lennons.

Re: music....My biggest successes came when I had no connection to the music played by the station. I had no favorites, I had no expectations. I knew what sounded good, and I played the playlist as presented. Made it work.

Without that burden, I could concentrate on having a good time, and discovering new music with a fresh, unjaded ear. It was like waiting at the record store for the new music to come in, every week.

It's not often you get to say, "If I knew then, what I know now..." and live that. But I started at one station as a wet behind the ear's rookie in the format, but with 20 years experience.

It was the most fun I've ever had in Radio.

> the widgets. An hour, and you know everything.

We used focus groups extensively at CBS. GM swore by them. Same scenario as you describe.

As the station matured, the results were not so good when focus group led research was applied. Suggesting we were missing something significant. GM's answer was more focus groups.

Focus groups, from where I sit, are the beginning of a long
circuitous and always circular path through some diffuse fog that
masquerades itself as science. And without a very good deal of sense,
you can end up exactly the one place you set out to avoid. And depending
on the questions or topics presented, and how they're presented, you can
either end up with exactly what you set out to prove, or with something
that you don't really want.

It seemed like an expensive crap shoot, with all out jobs hanging
on the outcome.

The pizza was good, though. But this is Chicago, after all.

Now music tests were done by an outside company, commissioned by
the consultants. The GM had no input or participation there.

The results of the music tests produced some terrific results.
Although the GM's wife STILL insisted that we play songs out of format.
Even off list. The GM insisted that we play them, because she was, after
all, target demo. I think I pointed out that she was also the Sales
Mangler for the competition. In a staff meeting.

I didn't start my own car for several weeks.

I experienced a lot of that, over the years.

A point I tried to make here and in the broadcasting groups last
year. "New by degrees."

I think I told you about our flagging ratings. We did perceptuals,
we did music tests, we did every conceivable thing to figure out how to
reconcile the taste for favorites, with the increasing heat for 'Hot,
New," and "Classics."

We changed one song. Not one category. But we added a single song to
a single category. And I produced a single image piece and added it to
the rotation.

The addition of one song changed how the whole playlist rotated. The
listeners loved it. Numbers came back, and we got phone calls, cards and
letters thanking us for making such a 'sweeping change.'

It takes more art than Selector. There isn't that much art in the
business, anymore.

My question is that more stations are doing things this way...VT
automation....where are the talent of which you speak? And where are the
new ones coming from? Who's grooming the next generation of talent?
Real talent..performers with a clue? I"m not seeing it.

>> Well, the book came and went and the listeners did NOT return.

> music." Often, a big one.

My experience is that it depends on the jocks. When I was in Iowa,
FM penetration was just getting underway. There were the heritage AM
rockers, and there were a few of the newer CHR FM's and then there was
Q102. Automated rock. Jockless. Just music and commercials.

It held its own for quite a while. It was on in malls, in
restaurants. I listened to it the entire time I was there. Why? The

jocks locally were pretty lame. Everyone thought they were the next
Lujack or Landecker. Q102 was a respite.

As I was leaving the area for my next opportunity, someone was
putting together a personality CHR with real talent. Blew Q102 into the
next incarnation. Almost immediately.

It really depends on how you present the question. Do you like
jocks? or Jockless? Or do you like (name your talent here)? I've heard
too many 'jockless' fans get drawn in by a decent performer. "I hate
disk jockeys, but I listen to (Name) every day. Mike Royko did a couple
of strikingly insightful columns about this very subject.

>>> And 40 years of mostly vacuous CHR jocks (with occasional rare exceptins)
>>> has made many wnat NO jocks at all.

I agree. My point is that if the stations were, in fact, exercising
a service commitment, and did so over a significant period of time, that
when something DID occur, that listeners would turn on their radios,
regardless of time or activities, to the station known for serving that
need. I've seen it too many times to dismiss.

"When you need to know....." Was the slogan of a number of stations
I worked. And the public bought into it. There would be a cloud of black
smoke on the horizon and the calls would start coming in wanting to
know. We'd send someone out and get the story. Storms would gather, we
were on it. Even the police department listened to KWKH for information
about breaking situations and emergencies.

There isn't that kind of response to Radio, today, because Radio
has dropped that ball. And that's just short of criminal. There is no
better way to disseminate information quickly. As you've pointed out,

93-94% of the population uses Radio. That's something that Radio should
be able to strategically tap into when situations arise requiring
current information in abundance.

I think you've hit the nail squarely, here. There is a dumbing
down that's influencing every thing we do. Everything we experience.
Everything we represent. But, I believe that if we grab the horns, we
can lead this bull. We have to be willing to take a leadership role,
focus on the service commitment, and raise out own standards of

performance. America can dumb down. And dumbing down media can certainly be profitable. But we can also take a higher road, still hit the numbers without sinking quite so low. I truly believe that. I've seen it work. It's not easy. And it's expensive to execute a service commitment. But it can be done. And it should be done.

The difference is that the sirens are someone else's doing. We don't bring them into the house. And from where I sit, when the sirens go off, we turn to the Radio for current information. My experience in several markets.

>>
>> And that's where music stations need to take a leadership role. Provide

> anyway.
>

But you took the extreme action. You took the station off the air, and replaced it with another station. You don't need to go that far. Play the music, shift the balance of tunes, if necessary, and disseminate information throughout. A personality playing tunes during a hurricane actually makes sense. It's an anchor to familiar things during stressful experiences. Disseminating information along with keeping the music going now adds to the value of the station by keeping status current for listeners as they party, and brings needed information so the partiers can take evasive action if necessary. If nothing else, they can keep tabs on the storm to determine the proper length of the party. And a talent dropping pieces of information can do so in a light, but informative manner, that doesn't crash the party.

I did that every tornado season throughout my career. With
exceptional results. But it was a commitment that the stations had
cultivated, and nurtured over very long periods of time.

> I have similar anecdotes about earthquakes, floods, and even plagues of

True. But, why dig a well, when you can merely set out a trough for
the night? Nothing gets disturbed, and you put the trough away when
it's no longer needed, and you Rock On.

That would have been later. When I went on the air, in 1966, the closest FMs were in Lima and San Jos&#65533;, CR. None at all in Venezuela and Colombia or Panam&#65533;, and nothing north of Lima in Per&#65533;. There were many in Brasil, far, far away, used as STLs.

All the receivers in the consoles were tube models at the time. Still, in 1966 there were, by accident, more FM receivers than TV sets in the market. TV came to Quito in about 1965 (except for HCJB TV, which was not particularly interesting)

> But then Ecuador and Colombia are two very different animals. I'm
> pretty sure that Colombia got into the FM game much earlier than
> Ecuador - at least in the major cities like Bogota (now-departed HJCK,
> for instance).

Colombia had a few FM STLs in the mid-60's, but no full power simulcasts, and definitely no independent FMs. Remember, Colombia was very late with TV, and it was government run. Venezuela had no FM until the late 80's.

My friend, who consults smooth jazz, has the radio in his office... or did last year. It is pretty interesting, as most people can look at it up close and not spot the fact that the band markings are "different."

Mostly here in this NG. IIRC, there were some people having trouble
with the tuning knob developing play in it or working itself loose;
there were also complaints about lack of sensitivity.

I personally haven't had any problems, however.

--
Eric F. Richards, efricha@dim.com
"Itï¿½s easy to fall into the trap of thinking that the purpose of a
business is to make money. But the real purpose of a business is to
create value. While itï¿½s possible to make money in the short run
without creating much value, in the long run itï¿½s unsustainable.
Even criminal organizations have to create value for someone."

The only ones I saw, at $49.97, were either returned/used, or display
units.
Unbelievable, that RS would retail a single-conversion, non-SSB
receiver for
$120 ! Grundig/Eton admitted to over-pricing its SW receivers, simply
because
the general public does not understand SW and is mystified by it. They
admitted
that their SW receivers, and SW receivers in general, are basically
over-priced
AM/FM radios. The Eton E10 is probably ok at $50, but certainly not
worth any
more, especially not $120 ! Instead, I would purchase a Degen 1103,
off Ebay, for
$45 + $20 S&H; it has dual-conversion, digital PLL tuning, and SSB.

The Eton E10s antenna trimmer can, evidentually, be kept in one
position, so its
value is questionable. The IF-Shift switch is symptomatic of a cheap
single-conversion receiver. As typical with Eton/Grundig/Tecsun, lots
of useless
switches/glitz, for lots of $!

Single conversion has its advantages. The E-10 is a nice radio.

There are FM's here in my area that I can pick up for hundreds of Km on my car radio, but can't even begin to hear on a home stereo (without an outdoor antenna) or a boombox. A car radio is a pirate operator's dream... it gives the illusion of having 10x the coverage they have in actuality.

7527. The Grove "Flex-Tenna" HVU Shortwave Listening (SWL) Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-05-31 01:28:56 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149038384.080446.72030@c74g2000cwc.googlegroups.com>
Source record: 76734

JHR,

The Grove "Flex-Tenna" HVU Shortwave Listening (SWL) Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9886

Yes having the two Wires Parallel and within an 1/8" of each
other should effectively have the signals cancel each other out.

- B U T - The Wires are not the same length and therefore
a-differential is created between the two signal levels in the
two Wires. Because In-Fact the Two Wires are of Different
Wave Lengths.

One must 'assume' that Grove did some Design Planning or
practical Trial-and-Error Testing to get the Length of the Two
Wires so that they would give good results across the HF,
VHF and UHF Bands.
* 24 Feet is a little short for a 1/4 WL for the 31 Metre Band.
* 19 Feet is a little short for a 1/4 WL for the 25 Metre Band.

For Shortwave {High Frequency Only} one might try building
the same type of "Flex-Tenna Antenna made from Speaker
Wire with Two Wires that are a little Longer and have a Greater
'difference' in the Wave Lengths :

Shortwave Upper-Middle Bands :
* 38 Feet (a little short) for a 1/4 WL for the 49 Metre Band.
* 24 Feet (a little short) for a 1/4 WL for the 31 Metre Band.
= Delta of 14 Feet

Shortwave Lower - Middle Bands :
* 47 Feet (a little short) for a 1/4 WL for the 60 Metre Band.
* 31 Feet (a little short) for a 1/4 WL for the 41 Metre Band.
= Delta of 16 Feet

NOTE - The Flex-Tenna Antenna design lends itself to Speaker Wire;
Twin-Lead and Ladder-Line "Parallel" Wire type wire-structures.
Coax Cable for this Design of Antenna would not work IMHO.
The Outer-Shield of the Coax Cable would effectively Shield the
Section of the Inner Conductor of the Coax Cable and thus only
result in the Shield and Delta-Tip functioning as the 'differential'
Wire Antenna Elements.

FWIW - Most of the Coax Cable 'Liner' Antenna Designs are
basically End-Fed Dipoles beginning with a 1/4 WL of Coax
Shield with an ending with 1/4 WL of Exposed Inner Conductor.

The Grove "Flex-Tenna" HVU Shortwave Listening (SWL) Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9818

well those are my thoughts - iane ~ RHF

Which is why I say that most stations are not used outside the 64 mv/m curve. However, FMs can be heard in residences, as is often done, by using a TV or FM antenna. The percentage of the population thus affected is very small.

The old radio in my old van quit working over three years ago.I don't want to fix it because driving and listening to the radio makes me nervous.I quit toting when I got out of the Army in 1965.I only go to the foodstore (a round trip of three miles) once a week or to the Goodwill store (a round trip of about one and a half miles) several times a week,sometimes I miss a week or two going to the Goodwill store,so I dont miss radio all that much when I am out and about.

You could make a similar antenna out of coax but it would be more bulky
than the Grove version.

You can make loop antennas with coax that are balanced antennas. The
loops made of coax can be made sensitive to the E and M fields or just
the M field.

You could use the speaker wire to make a loop antenna that was sensitive
to the E and M fields.

< Snip >

It's not needed in its current form, that's for sure.

The benefit of moving to the current DRM scheme is not enough to make everyone switch to the digital scheme and buy new radios. I don't see the point in making the listening experience the same in all mediums anyway. I don't want my radio to sound like an Internet stream. I already have the Internet streaming experience on my computer.

Just the delay from buffering is a pain. Do you realize that band scanning will be a thing of the past with this as an example of how the listening experience will change?

Why do people not realize that any change brings pluses and negatives even if it works right or meets the engineering targets? With DRM working to claimed performance you still have downsides using it over analog.

I'll wait for DRM2, 3 or 4 ... until they get it right.

DRM proponents better get used to the idea that a DRM radio will suck more power than an analog radio. DRM will require more circuitry and even if they get it down to one integrated chip for all the extra processing needed over analog it will still suck more juice over an analog design. If you don't want to hear this then just keep on dreaming.

In the mean time they should stick to a specific part of each of the bands so they don't make a mess of the analog reception and I'm not willing to entertain the notion of some part of the band not being targeted to my region at some time of day either.

You have a questions. I just gave the answer.

I have not operated it but I have handled it and the case plastic has a
rubbery feel to it making it easy to hold and manipulate the controls.

Interesting change from any other device made with a smooth plastic case.

< Snip >

Usually I have made a folded dipole out of 300 ohm twin-lead and taped
it the back of a picture frame or cabinet to hide it from view.

Telamon - I will repeat my self ~ RHF

For 'my' "First" Digital AM/MW Radio.

I think the first Manufacture to come out with an
IBOC AM/FM Radio Plug-an-Play Module for a
Home Computer under $100 will be my first
IBOC Radio purchase.

Having IBOC "Local Only" AM/FM Radio Stations
at the Computer for 'passive' Radio Listening while
I am thinking and working on something else may
be a good use of the both the Time and the Money.

Ideally this type of PC based DRM Radio would be
Software upwardly programmable for DRM-2-3-4 etc . . .
.
.
. .

No need to repeat. I sniped and responded to another part of your post, which was the question you posed.

If you own a radio capable with a large enough bandwidth filter 12KHz or larger you can take the output to a computer sound card. Then you can buy the DRM software for like $100 bucks.

Someone posted here before that you can find the source code at some web site for free but then you would have to compile it yourself and I would have no way of knowing if it would work the same as the purchased software from the DRM consortium site or if it is up to date.

Though the source code is free you might have to buy the software development environment (compiler) software. I'm sure someone would respond with that information in the news group if you were to ask.

Telamon,

Maybe someone could do some modeling of these two
types of Wire Antenna

First a piece of Speaker Wire with one Wire 24 Feet long
and the other Wire 19 Feet long using an "F" Connector
at the common Feed-Point-End.

Second a piece of Coax Cable with the Outer Shield
Terminated at 19 Feet and the Inner Conductor with
the Insulation still around it continuing for another
Five Feet for a Total Length of 24 Feet - again using
an "F" Connector at the common Feed-Point-End.

Some How I Do Not Think That They Are The Same Antenna.

but i could be wrong -and- you could be right - iane ~ RHF

Just try this : http://www.google.fr/search?q=eton+e10+review

One end user review here :
http://www.eham.net/reviews/detail/5100

The Eton E10 is a rebadged PL550 Tecsun Radio :
http://www.radiointel.com/review-pl550.htm

Eton price : > 100 US$
Tecsun price : 50 US$ off eBay + shipping (can be 25 US$!)

For the same price you can also consider buying the Degen 1103 or 1102 that are said to be good performers. I found on eBay today a DE1102 with a free SW active antenna DE31... Can be a good deal for that price...

Just my 2 cents,

Charly
(I have no interrest nor link or whatsoever with the above companies)

Telamon,

I am NOT talking about a "DRM Ready" PC Based Radio.

I am talking about a FCC (US) Standard "IBOC Ready"
AM/MW and FM 'PC' Based Radio that would simply be
a Plug-and-Play Card to insert into any PC for instant
IBOC "High Definition" (HD) Quality Sound and other
IBOC enhancements such as Text, Data and Images.
{Buy--Down-Load-that-Song-Now} {Subscribe-Now}
{Sign-Up-Now} {Enter-Now}

1 - Insert IBOC {HD-Radio} Card

2 - Load IBOC {HD-Radio} Card Software

Enjoy IBOC "HD" AM/MW and FM Radio with improved
"High Definition" (HD) Quality Digital Sound from your
Local AM/FM Radio Stations through your PC. For
'passive' Radio Listening while working {using} at your PC.

To me a PC Based IBOC "HD" AM/FM Radio Plug-and-Play
Card is a better "First Product" for Radio Manufactures
then a Home IBOC "HD" AM/FM Radio or a Automotive
IBOC "HD" AM/FM Radio. More "Earily Adapters" will buy
a PC Based "HD" Radio -IMHO- before they would buy an
"HD" Radio for Home or Car.

My Price Point for a PC Based "HD" Radio = $100 ~ RHF
Again I am talking about a US Standard IBOC AM/FM Radio.
.
.

7558. Part # 1 - The Simplest Shortwave Listener (SWL) Antennas That I Know Of . . .

Newsgroup: rec.radio.shortwave
Date: 2006-05-31 09:44:13 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149068653.910454.321720@h76g2000cwa.googlegroups.com>
Source record: 76916

For One and All,

Part # 1 - The Simplest Shortwave Listener (SWL) Antennas
That I Know Of . . .
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9894

One of the simplest Shortwave Listener (SWL) Antennas
that I know of is a Doublet {Dipole} Antenna made from
- - - Guess What . . . Speaker Wire !

This simple a Doublet {Dipole} Antenna can be Rigged Out-Side
-or- In-the-Attic if needed.

NOTE - Larger Size AWG Stranded Speaker Wire is Preferred.

First - Buy a 50 Foot Roll of Speaker Wire.
Roll-it-out and fold-it-over in the center forming two pieces
25 Feet long and tie a Loop Knot at this Center Point.
* The 'common' Overhand Loop Knot
http://www.outdoorcanada.ca/fish/loop_knot.shtml
* Figure-of-Eight Loop Knot
http://en.wikipedia.org/wiki/Figure-of-eight_loop
* Surgeon's Loop Knot
http://en.wikipedia.org/wiki/Surgeon%27s_loop
" KNOTS " => http://en.wikipedia.org/wiki/Knot

Antenna-End of the Speaker Wire :
Split the Two Wires apart {separate them} along one
piece of the Speaker Wire and again tie an Overhand
Loop Knot at both of the Split-Ends. Tie a Nylon-Poly
Rope for Rigging to the each of the Overhand Loop Knots
{all three} Center and both Ends. The Two Arms that
are formed are about 25 Feet long and the Tip-to-Tip
Length of the Wire Antenna Element is about 50 Feet.
A Doublet {Dipole} Antenna of this Length is 'cut'
for the 31 Meter Shortwave Band.

-IF- 50 Feet is a Bit-to-Long one Arm can be shorted by
Rolling-Up the Antenna Wire Element into a Four-Inch
Circle of about Eight Turns {Wraps} and securing the
Coil; this will shorten that Arm down to 17 Feet for
a Tip-to-Tip Length of 42 Feet.
- - - You now have transformed your Dipole Antenna
into an improved Windom Antenna {Off-Center-Fed-Dipole}.

Radio-End of the Speaker Wire {Feed-in-Line} :
At the End where the Two Wires are still together
separate them about Three Inches and Strip the
Insulation away from first {last} Inch and [Optional]
Tin {Solder} about a Half-Inch of both of the Wires.
Note - Some will take the time to Twist the Two Wires
along their full feed-in-line length to improve their
function as a feed-in-line -vice- antenna element.

RIG -The Antenna-End of the Speaker Wire a Flat
about 12-15 Feet above the surface of the ground.

ATTACH - The Radio-End of the Speaker Wire to the
Receiver's Twin Antenna Terminals -or- the Radio's
1/8" Mono-Jack using an 1/8" Mono-Plug to make the
connection into the Radio.

SUMMARY - A simple basic Antenna using One Piece
of Speaker Wire that is easy to find anywhere and
relatively low cost. Plus a Spool of common Mason
Line for Rigging the Wire Antenna Element.

Easy - To Make with one common Tool a Knife.

Repeatable - Hard Not To Build, Rig and Connect Right.

Reasonable Performance - Based on the Materials,
Time and Money that it Cost to Make and Install.

CAUTION - Be Sure To Ground Your Radio Shack's
Equipment when using any External {Out-Side} Antenna.

Next - Part # 2 - The Same Idea Taken In-Side {In-Doors}
and Guess What . . . It Is Ready Made !

Keeping It Simple And Practical - iane ~ RHF

For One and All,

The Picture Says It All :o) - Old Fart Offers Hot Stick !

High Voltage Telescoping 5 to 50 Foot Hot Stick
http://cgi.ebay.com/_W0QQitemZ7622755669
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=7622755669

NOTE - This is a Completed eBay Auction but the Picture
was worth wating for it to Close to Post here.

Here is a great High Voltage Hot Stick for someone.
Hot Stick is shown to the left of Old Fart but then
this would be to your right . This Schtick has it's
case as well. Collapsed Height is is 64 Inches Tall
and Telescopes to Fifty Feet in about 12 Sections.
We have Telescoped-it-Out and have taken a Picture
as shown.

Honstly I don't know which is in worse shape
the Old Fart ? -or- the Hot Stick ?

Just For The Fun Of It ! ~ RHF

I do see a few Michigan plates around here, but most are New York,
New Jersey, and New Hampshire. There are also a few Ohio, Indiana,
Kentucky and Pennsylvania plates. Of course they've all left for the
summer, because its too hot for them.

I always wear my AFDB (Aluminum Foil Deflector Beanie) when
I listen to The Power Hour with Nurse Joyce "Ratchet" Reily, Alex
"Diahareea of the mouth" Jones and Brother "Friskey as a Spider
Monkey on Viagra" Stair.

It helps me put their words on shortwave in perspective.

The ORIGINAL AFDB is here!! --> http://zapatopi.net/afdb/

FOOTNOTE: The American spelling of aluminum is used here.
If you are searching for more information on aluminum, be aware
that the British spell it "aluminium" (..and pronounce it accordingly).

** HISTORICAL FOOTNOTE: Aluminum was originally named
"alumium" by Sir Humphry Davy, who later changed it to "aluminum"
(perhaps in an attempt to make it more Latinized since alumen is
Latin for alum, the aluminum compound that the name is derived from).
The British (and allied English speakers) shortly thereafter changed
the name once more, this time to "aluminium" so that it would
again match the pattern of most other elements (helium, sodium, etc.),
while the North Americans eventually decided to keep the
second, slightly more traditional name. I predict that North
Americans will adopt the more regular "-ium" spelling by the
year 2050, prompting the British to start calling it "alumininium".
At that point debate can begin on changing "platinum" to "platinium"

7569. Aluminum: Satan's Metal and Killer of Millions? (kook alert)

Newsgroup: rec.radio.shortwave
Date: 2006-05-31 14:19:21 UTC
From: Profit Stair the Dirty Old Man <forgerofirons@lastdaysprofits.com>
Message-ID: <620e4$447da770$d1cc7bf4$13342@snip.allthenewsgroups.com>
Source record: 76927

A very amusing read that even Profit Stairmeister would love:

http://www.seanet.com/~raines/aluminum.html

"The Watchtower history is replete with examples of not only
erroneous theological positions such as wrongly predicting
the time of the end, but also advocating numerous quack
medical nostrums. Part of the reason for their involvement in
quack scams was due to the tendency of certain high level
Watchtower officials to reject anything that was orthodox-
-orthodox religion, orthodox science, and orthodox medicine.
Unfortunately, the Watchtower is still today stuck in a
quagmire of foolish beliefs which they have not yet been
unable to transcend. Their almost half-century crusade against
aluminum is an excellent example of their involvement in
supporting a conclusion which was almost universally regarded
as fringe even during the height of their crusade. They taught
that aluminum cooking utensils caused scores of diseases, and
were "a curse to humanity and their manufacture and use
should be forbidden by law" (Force 1932 p. 35).
Today their former stand is seen as extremely foolish
even by the Watchtower themselves."

(TRANSLATION of the above: "Pull the wool over your OWN eyes !")

"They'll pay to know what they really think."
- JR "Bob" Dobbs 1961 www.subgenius.com

--
"Science is truth, science is altogether good, it's organized common
sense, it's a description of nature. There's no such thing as bad
science. It's not scientists that need to be attacked, it's
politicians, lawyers and bankers, and sometimes accountants, school
trustees and the ladies aide"
- Dr. C. Donald Cox, Feb 1, 2003

I'd rather have a stand-alone radio.

The circuitry can be made better (in theory) and it's just more
transportable. You can pick up the radio and carry it to the kitchen,
the living room, the porch....

Can't do that with a computer, unless you have one of those laptops
with REAL CHEESY tin-ear speakers.

But then, radio tuner cards are pointless to me unless you make a habit
of using the computer as a sort of "skimmer" or "logger"

HJCK's website says the station went on the air in 1950.

http://www.hjck.com/historia.asp

"founded on September 15, 1950 with the purpose of raising the culture
level of Bogota radio..."

By the way, HJCK turned around recently and LMAed their 89.9 FM
frequency to Caracol, which in turn, plugged in the "Las 40
Prinicpales" CHR format. *shudder*

HJCK is now only heard on the internet. Bummer. :(

At least Cali still has HJSA on FM, the classical station owned by the
Carvajal office/business services conglomerate

Bullshit. I listen to WSM on 650 KHz AM, and there is a crappy local
on 640 KHz AM that already causes problems. If they added IBOC, they
would make it even worse. They play big band crap and constantly over
modulate even though the FCC never seems to catch them. The engineer
only shows up if they are off the air for an hour or so, and only fixes
what he's told to. When the interference gets too bad I have to listen
to the online stream.

Tonight, a history lesson van Die BoereVolk! Tant Minnie Pretorius, wife of Dr. Lets Pretorius, speaks about the genocide of 24,000 women and children by the hands of the British in Die Anglo-BoereWar. The concentration camps and the horror inflicted upon them. Tant Minnie is a descendant of TrekkBoeres who crossed the Vaal river in the land of Die TransVaal!

Tant Minnie then speaks of her recently being accosted by a Bantu security guard while on her way to trial.

Also, Judge Ronald calls in to speak with John about South Africa and the Boervolk.

Let me be plain here: Politically, Chuck Harder is an exact duplicate
of Oklahoma City bomber Timothy McVeigh, who was executed in June 2001
for the terrorist attack that killed 168 and wounded 500.
The truth does hurt, doesn't it, cuhulin?

Am I the only one who sees something wrong with the idea of having to buy an extra antenna for an HD FM radio station when I can pick up the analog version of that same station using the built-in whip on a ghetto blaster?

At least that seems to be what is implied with the BA-Recepter. Well we made a crappy deaf radio, but you can always spend MORE and add a roof antenna or whatever.

Meanwhile the 20 year old JVC monster ghetto-blaster keeps pumping away.

Thanks for the links.

I had seen the Eham.net review but did not know it was a rebadged
Tecsun.

And for what it is worth, the E10 is $49.97 at Radio Shack.

>From what I see, the radio looks to be a rather good performer.

So for $50 and the positive reviews, it would seem that the radio is a
good buy.

So why all the negative press?

Bitter grapes resulting from the demise of the amateur radio industry
in the US and the rise of the competition in China?

Oh, cuhulin, if you doubt me, I strongly urge you to obtain copies of two books, "All-American Monster: The Unauthorized Biography of Timothy McVeigh," by Brandon M. Stickney, Prometheus Books, 1996; and "American Terrorist: Timothy McVeigh and the Oklahoma City Bombing," by Lou Michel and Dan Herbeck, ReganBooks, 2001. If you somehow can grab these two tomes, read carefully the quoted material from McVeigh and compare it to what Chuck Harder says on the radio. I think you will be surprised - and frightened.

Agree completely. The Tecsun is not a bad radio but the Degen radios
you mentioned offer improvements in performance for about the same
price. At $100.00 the E10 was horribly over priced. It is a good
looking radio though.

No, early germanium signal transistors didn't handle much current.
They were noisy, and had other problems that hadn't been ironed out
yet. They had a lot lower e-b voltage, and could be used at lower
voltages but it took a number of years to get the beta high enough to
make ones that had enough gain at a lower supply voltage.

Weight and convenience. Flip the case open, unsnap the old battery
and snap in the new one, close the lid and you're done. Less chance of
someone using one or more old cells that would die and leak, as well.

>
> Does IBOC sound better than current analog AM? Yes.

Yeah, others have said it sounds good. And I think ibiquity is doing it with a lower bitrate than even mp3s, although they had to change their decoder to get it right. I don't really know anything about digital demodulation, but ignorance has never stopped me from imagining things, and I wonder if ibiquity has somehow optimized their demodulator for current programming. That would be fine for now, but maybe not so fine if jazz music gets a big as it ought to be or if Beautiful Music makes it's dreaded comeback or if the Chinese Communist Party "new economies" all the radio stations and blankets the country with Chinese opera.

Again, I don't know anything about digital decoders, but I don't imagine we're getting something for nothing.

And it wouldn't make a bit of difference to ibiquity, as long as the radios sound OK until thier patents run out.

IBOC AM is nasty enough during the day on a current radio. Tune around and hear the HIISSSSSSSS between a few stations. What happens if ibiquity gets their way, and almost every station has a IBOC noisemaker running 24/7? How annoyed will most people get? Will some choose to avoid the AM band entirely? Most people know as much about the technical side of radio as they want to know, which is practically nothing. I suppose Big Radio will have to start telling people that if people just knew more about radio, they'd get it through their thick heads that the HIISSSSSSS is just chock full o' crystal clear digital audio.

You'll love the HIISSSSSS, after we sell you an expensive radio!!

Ah, yes. More of the "broken radio" sound. Normal AM interference is
intuitively obvious, it sounds pretty much like what it is, two people
talking at once, or whatever. It requires no explanation. But dropouts?
What the hell is that? Is there smoke coming out of the radio?

> Joe

Joe, your fond reminsinces make me realize that I may have been too harsh in my stated opinions of the 9V battery. I don't want to give the impression that I dislike 'em as much as I dislike -- say -- IBOC.

The lowest price I remember for the things was about 19 cents. The ones wrapped in cellophane like a pack of cigarettes seemed to cost a few cents

more. But this was well after the fifties, when everything connected with shirt pocket portables was still new and expensive. I've seen old Zenith ads in which they claim that the difference in cost of replacing the batteries in their AA penlite powered radios was enough to make up a significant part of the increased price of their radios.

I do know that flashlight battery powered radios were cheaper to run than transistor radio battery powered radios. We had a Silvertone radio which would go a year between changing it's six D cells. I know that's not a fair comparison with the 9V transistor radio battery, but the 9 volters seemed to have a lifespan best measured in hours.

And it's not like I think the 9V battery is completely useless. I was considering putting some LED illumination behind the dial of my Hallicrafters TW 1000. I was concerned about the visibility of the dial markings under the monochromatic illumination of the LEDs. So, I figured I could take three different 9V battery snaps and LED up some red, yellow and green flashlights. I didn't actually do it, but I did think of it. And I also figured I could glue an opamp, deadbug style, and a tiny watch crystal sized 100 kHz crystal, on a snap and make crystal calibrator. It works fine on perfboard! That's not to mention the Zener diode noise generator and the 650/1300 kHz LC signal generator for peaking antenna/RF circuits. Yep, I could have done it all on 9V snaps, but I didn't.

It's starting to look like 9V transistor radio batteries are more useful than I am. Damn.

>*Today I use a Sony ICF-SW35, normally kept in my car, when I go bike
>riding. I STILL can't imagine anything better than having a radio on my
>bike!

I'll take it you mean there's nothing better -- on a bike.

It seems to me the better solution is to cut the coax shield and stuff
the insulator and inner core into the copper pipe.

I'm at a loss here regarding shoving coax inside a pipe with the
insulator, as mentioned in your post.

If you need a PC, why not just stream the audio in the first place. I'm not a fan of toys that require a PC. The ability to hook one up is always nice (radio programming, GPS trail playback, etc), but the requirement to use a PC isn't good. Standards change, the OS changes, then you are left with junk if the manufacturer doesn't support the product.

I manage to get carbon-zinc 9-volt batts - either Eveready or Panasonic
in two-for-a-dollar packs at all the "Dollar Stores" here..

Of course, I can also get 4-packs of AA cells for a dollar (C-Zn also)
but I usually buy alkalines from Ikea Furniture, which comes out
cheaper.

9-volt alkalines are outrageously priced though. Almost $3 or $4.00 per
BATTERY? What the hell? :(

Radios work fine with a Carbon-Zinc battery though.

Agreed...but again the E10 is at $50...not $100....and it FLEW off the
shelves at Radio Shack.

In the big picture. really how important is SSB?

The fact that more and more radios are being released without SSB is a
case of the marketplace trying to tell us something.

7614. WHY - A 'separate' PC Based IBOC "HD" AM/FM Radio Plug-and-Play Card would be My Choice for a First "HD" Radio

Source record: 76822

Miso,

WHY - A 'separate' PC Based IBOC "HD" AM/FM Radio
Plug-and-Play Card would be My Choice for a First "HD" Radio

It is my experience that often Steaming Audio via the Internet
gets Buffered or Drops-Off for many Internet Related Reasons.

A separate PC Based IBOC "HD" AM/FM Radio
Plug-and-Play Card would simply be a Radio that
is co-located with-in the PC and using the PC's
Sound System {External Speakers} for the Sound
Output. Something to Listen to while using the PC
in the Home Office. The Radio like any Radio will
pick-up and receive by itself as long as it has Power
and the Radio Station's Transmitter is Working.

For me the PC Based IBOC "HD" AM/FM Radio
Plug-and-Play Card would be to simply listen to
the "LOCAL" AM & FM Radio Stations without
of the IBOC problems related to Distance (DX)
Out-of-Area Stations.

-IF- IBOC becomes a "Reality" that we all have to
'Live With' as Radio Listeners in the near future.
-Then- How Do I Make It Enjoyable for Me ? ? ?
-and- As for Me - I Don't Do "DX" while I am using
the PC - I simply Listen to the Locals in the Area.
[For Me this is 'passive' Radio Listening while
Thinking About and Doing something else.]

hope this explains "why" i would get a 'pc' base
iboc 'hd' am/fm radio plug-and-play card ~ RHF

7615. Transformer Wire = Magnet Wire as a a Light-Weight Antenna Wire {Hidden] Stealth Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-05-31 20:32:58 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149107578.181762.130890@g10g2000cwb.googlegroups.com>
Source record: 76823

JW,

Transformer Wire = Magnet Wire is usually Solid Copper
Wire with a thin Enamel Coating and can work well as
a Light-Weight Antenna Wire {Hidden] Stealth Antenna.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9904

TIP - When your Rig the Antenna. You might consider
using some left-over Fishing Line to Rig the Wire
Up-to-the-Tree Limb -but- Not Touching the Tree Limb.
The Magnet Wire from a Transformer will work OK as a
Stealth Antenna in all types of Weather provided that
it does not get grounded out by Wet Weather to the Tree.
So having 3-5 Feet of Nylon Fishing Line between the
Tree and the End of the Wire helps to Insulate {Isolate}
the Wire from the Tree and the Ground. Once you Rig
the Wire and Fish Line a 4-8 Ounce Fish Weight
Suspended-in-the-Air at the End of the Fishing Line
will allow for the movement of the Tree especially
since Thin Magnet Wire Breaks Easily - S N A P -

TIP - For the last Foot of the Antenna Wire nearest to
the House {Building} join Knot and Solder the Magnet
Wire to a 3-5 Foot piece of Insulated Hook-Up Wire.
Run the Hook-Up Wire through a Plastic Drinking Straw
and position the Hook-Up Wire and Plastic Drinking Straw
so that the Window closes-on-them and Locks-them-in-Place.

hope this helps - iane ~ RHF

I am looking for the Operators/Service Manual for the RL Drake 4245. Serial # 288. I also would like to know the Lamp # for the S-Meter on the 4245. Many thanks. Doug

7617. Copper Tape {Foil} for a "Stealth" Shorwave Listening (SWL) Antenna for the Out-Side and for In-Doors

Newsgroup: rec.radio.shortwave
Date: 2006-05-31 20:36:36 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1149107796.834209.15280@j55g2000cwa.googlegroups.com>
Source record: 76825

For One and All,

Copper Tape {Foil} for a "Stealth" Shorwave Listening
(SWL) Antenna for the Out-Side and for In-Doors

Try "Corry's" Slug & Snail Copper Tape Barrier for
Garden use is sold in 15 Foot Rolls works well for a
Stealth [Hidden] Antenna. This Tape is a Thin Copper
Foil about and Inch Wide with Sticky Stuff on the back
to attach it to a Surface. Lots of Surface Area for
RF Signals to travel dwon to your Radio.

Strip-Off and Inch of Insulation from the End of the
Feed-in-Line. Take the End of the Copper Tape and
wrap the Clean-Bright-Copper-Side tightly around the
exposed Wire; and Solder them together.

Apply to the Side of the House as a Vertical Antenna
-or- Under-the-Eaves as a Horizontal Antenna.

Two-for-a-Dipole :
Use two of these 15 Foot Rolls to make a Dipole Antenna
with a Twin-Lead or Coax Cable feed-in-line.

OH ! - DID I SAY "STEALTH" ?
Just Paint It and No One Know It's There ! :o)

NOTE - Also can be used In-Door with good results
as a Corner-Fed-Dipole : Feed-in-Line going up a
Corner of a Room with the two Arms of the Dipole
at the near the Ceil-to-Wall Edge and Extending
out from the Corner along two Adjacent Walls at
a Right-Angle. Paint-It-and-Forget-It ! You could
even Paint the Coax Cable or Twin-Lead feed-in-line.
This Stealth In-the-Room Dipole Antenna "Looks" a
lot better than a Slinky Dipole Antenna 'hanging'
in plain view about the Room and performs about as
well as any Wire Antenna that would happen to be in
the same Room -All-Things-Considered-

yes it is that simple - iane ~ RHF

For some of us there is more to a radio than raw performance. How does
the radio sound.... is it to your liking. How about the ergonomics.
The 1103 has been justly criticised for its general layout yet it is a
very good performer.
I have both and am just learning my way around the E-10 . After
the first couple of days I find the E-10 much more pleasant to use and
the audio crisper to my no longer young ears. I haven't done an A/B
comparison but my feeling is that the 1103 is more sensitive on MW for
sure and perhaps on SW. I had the E-10 out to a remote area at mid
day yesterday and was getting BBC 12095 off the whip without problem.
Also I tossed about 20 feet of wire along the ground and onto a 4 foot
bush and attached it to the antenna. Signal meter went from 1 to 3
bars and audio improved.
The E10 tuning knob is easier to use.
Try one out and see if it works for you. I don't think it is a
bad radio at all.

Operationally it is probably the same as the R7/A. My R7 uses a #53 for the
S-meter light, you might pull the one you have and check the number.

Good luck on finding the manual.

7621. inductance loop versus inductance dipole ...

Newsgroup: rec.radio.shortwave
Date: 2006-05-31 21:00:19 UTC
From: switcher <no@KijkenZeHierOokAlNaar.be>
Message-ID: <no-C16EDF.23001931052006@news.stben.net>
Source record: 76829

If, for a MW loop, you're looking for 200microhenries to construct a
loop,

what kind of inductance do you want for the dipole ??

You can construct a loop for SW, or a dipole too (for a sw loop, I guess
you only need 20 microhenries).

I'm looking for a relation between a loop and dipole in terms of
inductance.

Look here, if you make the loop larger and larger, you'll get some kind
of ... dipole in infinity ... That's fine, but where are the formula's
for inductivity then ??

Thanks,
Marc

Yeah, but alkalines last 8 - 10 times longer. At least, they always
have for me. In my book, that's a fair swap for the price and reduced
need to mess with changing batteries. Life's too short.

Aren't most of your reasons applicable to any radio, including standalone
(not PC based) ones? However, with standalone radios, I wouldn't expect
the manufacturer to provide an upgrade.

(Unless you are expecting RS to provide a DRM upgrade for a DX-398.)
